Trademarks

Linux is a registered trademark of Linus Torvalds. PathScale is a registered trademark of Cray, Inc. Red Hat and all Red Hat-based trademarks are trademarks or registered trademarks of Red Hat, Inc. SUSE is a registered trademark of SUSE LLC. NVIDIA, CUDA, GPUDirect, HPC SDK, NVIDIA DGX, NVIDIA Nsight, and NVLink are registered trademarks of NVIDIA Corporation. FLEXlm is a registered trademark of Flexera Software, Inc. PBS Professional, and Green Provisioning are trademarks of Altair Engineering, Inc. All other trademarks are the property of their respective owners.

Rights and Restrictions

All statements, specifications, recommendations, and technical information contained herein are current or planned as of the date of publication of this document. They are reliable as of the time of this writing and are presented without warranty of any kind, expressed or implied. NVIDIA Corporation shall not be liable for technical or editorial errors or omissions which may occur in this document. NVIDIA Corporation shall not be liable for any damages resulting from the use of this document.

Limitation of Liability and Damages Pertaining to NVIDIA Corporation

The NVIDIA Base Command Manager product principally consists of free software that is licensed by the Linux authors free of charge. NVIDIA Corporation shall have no liability nor will NVIDIA Corporation provide any warranty for the NVIDIA Base Command Manager to the extent that is permitted by law. Unless confirmed in writing, the Linux authors and/or third parties provide the program as is without any warranty, either expressed or implied, including, but not limited to, marketability or suitability for a specific purpose. The user of the NVIDIA Base Command Manager product shall accept the full risk for the quality or performance of the product. Should the product malfunction, the costs for repair, service, or correction will be borne by the user of the NVIDIA Base Command Manager product. No copyright owner or third party who has modified or distributed the program as permitted in this license shall be held liable for damages, including general or specific damages, damages caused by side effects or consequential damages, resulting from the use of the program or the un-usability of the program (including, but not limited to, loss of data, incorrect processing of data, losses that must be borne by you or others, or the inability of the program to work together with any other program), even if a copyright owner or third party had been advised about the possibility of such damages unless such copyright owner or third party has signed a writing to the contrary.

Table of Contents

Table of Contents	i
0.1 About This Manual	xvii
0.2 About The Manuals In General	xvii
0.3 Getting Administrator-Level Support	xviii
0.4 Getting Developer-Level Support	xviii
0.5 Getting Professional Services	xviii
1 NVIDIA Base Command Manager Python API	1
1.1 Getting Started	1
1.2 Connecting To A Cluster	2
1.3 Inspecting Settings	2
1.4 Modifying Settings	3
1.5 Inspecting The Entire Cluster	4
1.6 Performing Operations On Entities	4
1.7 Monitoring	4
1.8 Examples	4
2 Monitoring Data Producers	7
2.1 Measurables	7
2.2 Measurables Classes	7
2.3 Metric Monitoring Data Producers	7
2.4 Health Check Monitoring Data Producers	8
2.5 Collection Monitoring Data Producers	8
2.6 Perpetual Monitoring Data Producers	9
2.7 Prometheus Monitoring Data Producers	11
2.8 Node Execution Filters	11
2.9 Execution Multiplexers	12
2.10 Monitoring Resources	12
2.11 Collection Monitoring Data Producers With Filter And Multiplexer	13
2.12 Collection Monitoring Data Producers For Standalone Entities	14
2.13 Debugging Standalone Scripts	16
3 Monitoring Actions	17
3.1 Actions And Triggers	17
3.2 Time Restrictions	18
3.2.1 Time Restriction Syntax In BNF Notation	18
3.3 CMDaemon Environment Variables	18
3.3.1 Standard Environment Variables Available In Action Scripts	18
3.3.2 Extended Environment Variables Available To Action Scripts	20

4	CMDaemon REST API	31
4.1	Authentication, And Definition Of <i><curlauth></i>	31
4.2	Browsing The API	31
4.2.1	Returning A Status Using <i>/v1/status</i>	33
4.2.2	Monitoring Using <i>/v1/monitoring</i>	35
4.2.3	Session Using <i>/v1/session</i>	41
4.2.4	Version Using <i>/v1/version</i>	42
4.2.5	License Using <i>/v1/license</i>	42
4.2.6	Sysinfo Using <i>/v1/sysinfo</i>	43
4.2.7	Device Information Using <i>/v1/device</i>	45
4.2.8	WLM Information Using <i>/v1/workload</i>	46
5	NVIDIA Base Command Manager JSON API	49
5.1	Services	49
5.1.1	auth	49

Preface

Welcome to the *Developer Manual* for NVIDIA Base Command Manager 10.

0.1 About This Manual

This manual is aimed at helping developers who would like to program the NVIDIA Base Command Manager in order to enhance or alter its functionality. It is not intended for end users who simply wish to submit jobs that run programs to workload managers, which is discussed in the *User Manual*. The developer is expected to be reasonably familiar with the parts of the *Administrator Manual* that is to be dealt with—primarily CMDaemon, of which `cmsh` and `cmgui` are the front ends.

This manual discusses the Python API to CMDaemon, and also covers how to program for metric collections.

0.2 About The Manuals In General

Name Changes From Version 9.2 To 10

The cluster manager software was originally developed by Bright Computing and the name “Bright” featured previously in the product, repositories, websites, and manuals.

Bright Computing was acquired by NVIDIA in 2022. The corresponding name changes, to be consistent with NVIDIA branding and products, are a work in progress. There is some catching up to do in places. For now, some parts of the manual still refer to Bright Computing and Bright Cluster Manager. These remnants will eventually disappear during updates.

BCM in particular is a convenient abbreviation that happens to have the same letters as the former Bright Cluster Manager. With the branding change in version 10, Base Command Manager is the official full name for the product formerly known as Bright Cluster Manager, and BCM is the official abbreviation for Base Command Manager.

Regularly updated versions of the NVIDIA Base Command Manager 10 manuals are available on updated clusters by default at `/cm/shared/docs/cm`. The latest updates are always online at <https://docs.nvidia.com/base-command-manager>.

- The *Administrator Manual* describes the general management of the cluster.
- The *Installation Manual* describes installation procedures for a basic cluster.
- The *User Manual* describes the user environment and how to submit jobs for the end user.
- The *Cloudbursting Manual* describes how to deploy the cloud capabilities of the cluster.
- The *Developer Manual* has useful information for developers who would like to program with BCM.
- The *Edge Manual* describes how to deploy BCM Edge with BCM.
- The *Machine Learning Manual* describes how to install and configure machine learning capabilities with BCM.
- The *Containerization Manual* describes how to manage containers with BCM.

If the manuals are downloaded and kept in one local directory, then in most pdf viewers, clicking on a cross-reference in one manual that refers to a section in another manual opens and displays that section in the second manual. Navigating back and forth between documents is usually possible with keystrokes or mouse clicks.

For example: <Alt>-<Backarrow> in Acrobat Reader, or clicking on the bottom leftmost navigation button of xpdf, both navigate back to the previous document.

The manuals constantly evolve to keep up with the development of the BCM environment and the addition of new hardware and/or applications. The manuals also regularly incorporate feedback from administrators and users, and any comments, suggestions or corrections will be very gratefully accepted at manuals@brightcomputing.com.

There is also a feedback form available via Base View, via the Account icon, , following the click-path:

→Help→Feedback

0.3 Getting Administrator-Level Support

Support for BCM subscriptions from version 10 onwards is available via the NVIDIA Enterprise Support page at:

<https://www.nvidia.com/en-us/support/enterprise/>

Section 16.2 of the *Administrator Manual* has more details on working with support.

0.4 Getting Developer-Level Support

Developer support is given free, within reason. For more extensive support, the BCM support team can be contacted in order to arrange a support contract.

0.5 Getting Professional Services

The BCM support team normally differentiates between

- regular support (customer has a question or problem that requires an answer or resolution), and
- professional services (customer asks for the team to do something or asks the team to provide some service).

Professional services can be provided via the NVIDIA Enterprise Services page at:

<https://www.nvidia.com/en-us/support/enterprise/services/>

1

NVIDIA Base Command Manager Python API

This chapter introduces the Python API of NVIDIA Base Command Manager.

The Python API package was completely overhauled in NVIDIA Base Command Manager 8.2.

The `cmdaemon-pythoncm` package now provides a pure Python connection to the cluster manager, making it possible for cluster administrators to automate cluster operations via Python.

It also makes it possible to run Python code on any operating system that supports Python 3.5 and higher.

The BCM Python API uses the following extra modules:

1. `pyOpenSSL`
2. `ply`
3. `lxml`
4. `tabulate`
5. `monotonic`
6. `humanfriendly`
7. `six`

1.1 Getting Started

On the cluster head node itself the `python3` module can simply be loaded:

Example

```
[root@basecm10 ~]# module load python3
```

To execute or develop the Python code on any other machine usually requires some extra steps:

- Python 3 (3.5, 3.6, 3.7, 3.8 will work) should be installed
- The 7 extra modules listed previously should be installed using Pip
- The `/cm/local/apps/cmd/pythoncm/lib/python3.9/site-packages/pythoncm` directory should be copied over to the site-packages directory of the development machine

The `pythoncm` module should then be loaded, to confirm everything was set up correctly:

Example

```
[alice@desktop ~]# python -c "import pythoncm"
```

If connecting from outside the cluster, then port 8081 must not be blocked by a firewall.

A certificate is needed by the Python API to identify itself to CMDaemon.

The existence of the certificate on the head node should be checked. It should be copied over to the development machine, if it is needed there.

Example

```
[root@basecm10 ~]# ls -al .cm/
-rw----- 1 root root 1708 Dec 11 09:25 admin.key
-rw----- 1 root root 1269 Dec 11 09:25 admin.pem
```

Example

```
[alice@basecm10 ~]# ls -al .cm/
-rw----- 1 root root 1708 Dec 11 09:25 cert.key
-rw----- 1 root root 1269 Dec 11 09:25 cert.pem
```

The developer may need to contact the cluster administrator to get a certificate.

1.2 Connecting To A Cluster

The first step when working with the Python API is to establish a connection to the CMDaemon process on the cluster:

```
#!/usr/bin/env python
```

```
from pythoncm.cluster import Cluster
from pythoncm.settings import Settings
```

```
cluster = Cluster()
```

If working outside the cluster, then the settings for connecting to the cluster must be specified:

```
settings = Settings(host='<head-node-hostname>',
                    port=8081,
                    cert_file='/some/path/cert.pem',
                    key_file='/some/path/cert.key',
                    ca_file='../site-packages/pythoncm/etc/cacert.pem')
if not settings.check_certificate_files():
    print('Unable to load certificates')
else:
    cluster = Cluster(settings)
```

1.3 Inspecting Settings

All settings in BCM are stored inside an entity.

Each entity has a type and a unique name among the entities of the same type.

To inspect an entity it should first be found inside the cluster:

```
node001 = cluster.get_by_name('node001')
```

If the name node001 was also given a different entity, then the type must be specified to ensure that the correct entity is returned:

```
node001 = cluster.get_by_name('node001', pythoncm.entity.Node)
node001 = cluster.get_by_name('node001', 'Node')
```

Once the node entity is found, inspecting the settings is a matter of printing the desired field:

```
print(node001.hostname)
print(node001.mac)
```

Complex settings, such as network interfaces, have their own settings:

```
for interfaces in node001.interfaces:
    print(interface.name, interface.ip)
```

Because many nodes could have a network interface called `eth0`, such a setting cannot be found from the cluster: The following code will return `None`.

```
eth0 = cluster.get_by_name('eth0')
```

To find all `eth0` interfaces, all nodes need to be found, and then iterated over:

```
nodes = cluster.get_by_type(pythoncm.entity.Node)
all_eth0 = [interface
             for node in nodes
             for interface in node.interfaces
             if interface.name == 'eth0']
```

1.4 Modifying Settings

Basic entity settings are exported as Python properties and can simply be changed:

```
node001.mac = '00:00:00:00:00:00'
node001.category = cluster.get_by_name('gpu', 'Category')
```

Similarly interfaces settings can be accessed and changed directly:

```
node001.interfaces[0].ip = '1.2.3.4'
node001.interfaces[0].network = cluster.get_by_name('ib', 'Network')
```

Removing an interface from a node can be done in various Pythonic ways:

```
node001.interfaces.remove(0)
del node001.interfaces[0]
node001.interfaces = [interface for interface in node001.interfaces
                      if interface.name != 'eth0']
```

To add a new interface, the entity instance needs to be created first, and then added to the node:

```
eth1 = pythoncm.entity.NetworkPhysicalInterface()
eth1.name = 'eth1'
eth1.ip = '1.2.3.4'
eth1.network = cluster.get_by_name('ib', 'Network')
node001.interfaces.append(eth1)
```

All changes are made on a local copy of the entity. The cluster has no knowledge of the changes until they are committed.

It is recommended to make many changes locally, and only commit once at the end.

The return value of the commit operation should always be checked.

Committing a badly-configured node will be blocked by the head node:

```
commit_result = node001.commit()
if not commit_result.good:
    print(commit_result)
```

An entity found from via the `cluster` object is removed differently.

As with `commit`, the result should always be checked: a removal can fail if a node is UP:

```
remove_result = node001.remove()
if not remove_result.good:
    print(remove_result)
```

1.5 Inspecting The Entire Cluster

The example directory contains a script to inspect the entire cluster.

Example

```
[root@basecm10 ~]# cd /cm/local/examples/cmd/pythoncm/  
[root@basecm10 pythoncm]# module load python3  
[root@basecm10 pythoncm]# ./print-all.py
```

The example directory also contains a script that prints all metadata for all available entities in BCM:

Example

```
[root@basecm10 pythoncm]# ./entity_info.py
```

1.6 Performing Operations On Entities

All Python API functionality is contained in /cm/local/apps/cmd/pythoncm/lib/python3.9/site-packages/pythoncm.

Methods are documented inside the python code itself.

```
node001 = cluster.get_by_name('node001')  
node001.power_on()
```

When operating on multiple entities, it is possible to iterate over them and do each operation individually.

```
nodes = cluster.get_by_type('Node')  
for node in nodes:  
    node.power_on()
```

However the same can also be done with a parallel version of the operation. When possible the parallel version should be used, because it is faster and requires less network traffic.

```
nodes = cluster.get_by_type('Node')  
cluster.parallel.power_on(nodes)
```

1.7 Monitoring

All monitoring data can be accessed using the Python API.

Monitoring is a set of operations performed on entities.

For example, to get latest data for a single entity:

```
print(node001.get_latest_monitoring_data())
```

Monitoring operations on multiple operations should be done using the monitoring module:

```
data = cluster.monitoring.get_latest_monitoring_data([node001,  
                                                    node002,  
                                                    node003])
```

1.8 Examples

The best way to get going is by looking at the examples. These can be found on the head node, at /cm/local/examples/cmd/pythoncm:

Example

```
[root@basecm10 pythoncm]# ls
add-collection.py      entity_info.py        power-parallel-status.py
add-healthcheck.py    events.py             power-status.py
add-metric.py         execute.py            print-all.py
add-node-group.py     free_port.py          range-expander-test.py
add-role.py           get-status.py         remove-node-group.py
add-user.py           health-overview.py    sample-now-checks.py
all-nodes.py          instance_by_name.py   sample-now-parallel.py
certificate-info.py    latest-counter-data.py select-devices.py
clone-node-group.py    latest-health-data.py service.py
clone-node.py         new-nodes.py          service-status.py
cm-job-analytics.py   open-close.py         set-node-image.py
create-certificate.py parallel-execute-async.py wait-for-provisioning.py
create-ramdisk-task.py parallel-execute-check-status.py wait-for-up.py
dump-monitoring-data.py parallel-execute.py
```

The examples can be tried out after loading the Python environment:

Example

```
[root@basecm10 ~]# cd /cm/local/examples/cmd/pythoncm/
[root@basecm10 pythoncm]# module load python3
[root@basecm10 pythoncm]# ./power-status.py
INFO      (25-May-2020 18:29:25) [cluster.py      :207] Follow redirection to active head IP:

2

Monitoring Data Producers

This chapter covers how to add a new metrics and health checks scripts with `cmsh`.

Five different types of Monitoring Data Producers can be added:

- `metric`: a script which produces a single value.
- `health check`: a script which produces a `PASS`, `FAIL`, `UNKNOWN`, or `no data` value.
- `collection`: a script that produces zero or more metrics, health checks, or a combination of both.
- `perpetual` a script that is started once over the lifetime of the `BCM cmd` process. The script produces zero or more metrics, health checks, or a combination of both on its own timing mechanism.
- `prometheus` one or more URLs to Prometheus metric exporters.

A monitoring data producer cannot be plotted in `cmsh` or Base View, because it contains no data. A producer defines measurables: metrics and/or health checks. It also generates data for these measurables, which can be plotted.

2.1 Measurables

There are three types of measurable:

- `metric`: a numeric value, or `no data`.
- `health check`: `PASS`/`FAIL`/`UNKNOWN`/`no data`.
- `enum metric`: one of a set of user-defined string based values, or `no data`.

2.2 Measurables Classes

All measurables are grouped into classes. A class is a user-defined free string field, with `/` as delimiters. Base View uses this class to build a tree for easy search and access.

2.3 Metric Monitoring Data Producers

A metric data producer script generates one data point.

For example, as in the following script:

Example

```
[root@basecm10 ~]# cat /path/to/my/metric
#!/bin/bash
echo $((RANDOM))
# Optionally provide extra information
echo "Extra information" >&3
```

The script can be defined as a metric script via the `monitoring setup` mode of `cmsh`:

Example

```
[basecm10]% monitoring setup
[basecm10->monitoring->setup]% add metric my-metric
[...my-metric]% set script /path/to/my/metric
[...my-metric]% set class My/Class
[...my-metric]% set unit B
[...my-metric]% set interval 1m
[...my-metric]% commit
```

All nodes then execute the script every minute, and produce a random number.

2.4 Health Check Monitoring Data Producers

A health check data producer script generates one data point. The data point can be one of four possible values expected of it: `PASS`, `FAIL`, `UNKNOWN`, or `no data`. Other file descriptors can be used to provide extra information.

For example, as in the following script:

Example

```
[root@basecm10 ~]% cat /path/to/my/health-check
#!/bin/bash
if [ $((RANDOM)) -gt 8000 ]; then
    echo "PASS"
else
    echo "FAIL"
    # Optionally provide extra information
    echo "Extra information" >&3
fi
```

The script can be defined as a health check script via the `monitoring setup` mode of `cmsh`:

Example

```
[basecm10]% monitoring setup
[basecm10->monitoring->setup]% add healthcheck my-health-check
[...my-check]% set script /path/to/my/health-check
[...my-check]% set class My/Class
[...my-check]% set interval 1m
[...my-check]% commit
```

All nodes then execute the script every minute, and produce data values with roughly 75% `PASS` and 25% `FAIL`.

2.5 Collection Monitoring Data Producers

A *collection data producer* script can generate multiple data points in one run. Data points can be a combination of metrics and health checks. Collection scripts are also allowed to produce no data.

A collection script has two modes: `initialize` mode and `sample` mode.

- `initialize`: defines the measurables that data values are generated for.
- `sample`: returns the data values for all the measurables defined in `initialize` mode.

During normal cluster operation the initialize mode is called only once, during boot. Afterwards, the script is called in sample mode at the desired interval.

The following example combines both of the metric and health check examples from earlier on. However, this time it is written as a single script, using JSON as the output format:

Example

```
[root@basecm10 ~]# cat /path/to/my/collection
#!/usr/bin/python

import sys
import json
import random

def initialize():
    metric = {"metric": "my.collection.metric",
              "unit": "B",
              "class": "My/Collection"}
    check = {"check": "my.collection.check",
             "class": "My/Collection"}
    return [metric, check]

def sample():
    metric = {"metric": "my.collection.metric",
              "value": random.randint(0, 32767)}
    check = {"check": "my.collection.check",
             "info": "random with 25% failure rate",
             "value": 'PASS' if random.randint(0, 32767) > 8000 else 'FAIL'}
    return [metric, check]

def main():
    if len(sys.argv) > 1 and sys.argv[1] == "--initialize":
        data = initialize()
    else:
        data = sample()
    print (json.dumps(data, indent=4))

if __name__ == '__main__':
    main()
```

The script can be defined as a collection script via the monitoring setup mode of cmsh:

Example

```
[basecm10]% monitoring setup
[basecm10->monitoring->setup]% add collection my-collection
[...my-collection]% set script /path/to/my/collection
[...my-collection]% set format JSON
[...my-collection]% set interval 1m
[...my-collection]% commit
```

All nodes then execute the script every minute and produce two data points upon each execution. That is, one metric and one health check per execution.

2.6 Perpetual Monitoring Data Producers

A perpetual data producer script is a special case of a collection data producer script. It is intended to be used if the script needs permanent memory storage.

Example

```
[root@basecm10 ~]# cat /path/to/my/perpetual
#!/usr/bin/python

import my_sampler_module
import json
import time

# create single instance
sampler = my_sampler_module.MySampler()
# load important data into memory
sampler.load()

# Infinite loop with its own timing
delay = 0
while True:
    time.sleep(delay)
    (definitions, values, delay) = sampler.process()
    if definitions:
        # Print new measurables
print (json.dumps(definitions))
        # Print data
        print (json.dumps(values))
```

The `my_sampler_module` is the part which does the important work.

Example

```
[root@basecm10 ~]# cat /path/to/my/my_sampler_module.py
class MySampler:
    def __init__(self):
        self.initialized = False
        self.definitions = None

    def load(self):
        # Do time consuming work here
        metric = {"metric": "my.collection.metric",
                  "unit": "B",
                  "class": "My/Collection"}
        check = {"check": "my.collection.check",
                  "class": "My/Collection"}
        self.definitions = [metric, check]

    def process(self):
        metric = {"metric": "my.collection.metric",
                  "value": random.randint(0, 32767)}
        check = {"check" : "my.collection.check",
                  "value" : 'PASS' if random.randint(0, 32767) > 8000 else 'FAIL'}
        values = metric, check
        # return definitions once, afterwards they never change
        # but new definitions could be added this way
        definitions = self.definitions
        self.definitions = None
        return definitions, values, 60
```

The script can be defined as a perpetual script via the `monitoring setup` mode of `cmsh`:

Example

```
[basecm10]% monitoring setup
[basecm10->monitoring->setup]% add perpetual my-perpetual
[...my-perpetual]% set script /path/to/my/perpetual
[...my-perpetual]% set format JSON
[...my-perpetual]% commit
```

2.7 Prometheus Monitoring Data Producers

Prometheus is a monitoring and alerting toolkit (<https://prometheus.io>). A Prometheus monitoring data producer script parses data from a Prometheus exporter (<https://prometheus.io/docs/instrumenting/exporters/>)

The script can be defined as a Prometheus script via the `monitoring setup` mode of `cmsh`:

Example

```
[basecm10]% monitoring setup
[basecm10->monitoring->setup]% add prometheus my-prometheus-exporter
[...my-prometheus-exporter]% set urls http://my.prometheus.exporter:80
[...my-prometheus-exporter]% set interval 1m
[...my-prometheus-exporter]% commit
```

If multiple URLs are defined, then only the data values from the first successful HTTP GET are used.

2.8 Node Execution Filters

By default a monitoring data producer script is executed on every node. When this is not desirable, a node execution filter should be created. A node execution filter defines the nodes on which the producer script should be executed.

For example, a filter to execute the script only on cloud nodes can be configured as follows:

Example

```
[basecm10]% monitoring setup use my-check
[...my-check]% nodeexecutionfilters
[...nodeexecutionfilters]% add type Cloud
[...nodeexecutionfilters*[Cloud*]]% set cloudnode yes
[...nodeexecutionfilters*[Cloud*]]% show
Parameter          Value
-----
Base type           MonitoringExecutionFilter
Name                Cloud
Type                Type
Head node           no
Physical node        no
Cloud node           yes
Virtual node         no
Lite node            no
[...nodeexecutionfilters*[Cloud*]]% commit
```

It is also possible to filter based on the specific resources associated with a node:

Example

```
[basecm10]% monitoring setup use my-IB-check
[...my-IB-check]% nodeexecutionfilters
```

```
[...nodeexecutionfilters]% add resource IB
[...nodeexecutionfilters*[IB*]]% set resources IB
[...nodeexecutionfilters*[IB*]]% commit
```

Because of high availability, a special resource, `active`, is defined for the active head node.

Example

```
[basecm10]% monitoring setup use my-metric
[...my-metric]% nodeexecutionfilters
[...nodeexecutionfilters]% active
Added active resource filter
[...nodeexecutionfilters*]% commit
```

2.9 Execution Multiplexers

By default a monitoring data producer script is executed once: the node executes the script only for itself.

However, some scripts, such as BMC samplers, must be sampled from the active head node for all nodes.

In the following example a BMC script is run on each node that has the `ipmi` or `drac` resource:

Example

```
[basecm10]% monitoring setup use my-ipmi-collection
[...my-ipmi-collection]% executionmultiplexers
[...executionmultiplexers]% add resource ipmi
[...executionmultiplexers*[ipmi*]]% set resources ipmi drac
[...executionmultiplexers*[ipmi*]]% set operator OR
[...executionmultiplexers*[ipmi*]]% commit
```

If an execution multiplexer `<multiplexer>` is defined, then there should also be a node execution filter `<filter>` associated with it to restrict the number of nodes on which the script runs.

This is because having the script run on many nodes for many other nodes is unlikely to be a desired configuration.

The combination of the execution filter and the multiplexer should be read as:

for every node that matches *filter*, run script, for each node that matches *multiplexer*.

A more specific example, using two of the preceding examples, with a filter based on the resource `IB`, and multiplexers based on the `IPMI/Drac` resources, the combination should be read as:

for every node that matches `IB`, run script, for each node that matches `ipmi` or `drac`.

2.10 Monitoring Resources

Every device in BCM has one or more resources. These resources are automatically calculated from:

- Roles
- Hardware
- Settings

Resources for a specific node can be viewed as follows:

Example

```
[basecm10]% device use node001
[basecm10]% monitoringresources
CentOS7u5
Ethernet
category:default
```

It is possible to add one or more custom resources to a device:

Example

```
[basecm10]% device use node001
[basecm10]% add userdefinedresources MyResource
[basecm10]% append userdefinedresources MyOtherResource
[basecm10]% # wait ~10 seconds for the settings to propagate
[basecm10]% monitoringresources
CentOS7u5
Ethernet
category:default
MyResource
MyOtherResource
```

Any of these resources can be used to filter and multiplex monitoring data producers.

If a resources changes because of a settings change, then monitoring automatically stops or starts sampling.

2.11 Collection Monitoring Data Producers With Filter And Multiplexer

If a script has an execution multiplexer set, then it needs to determine for which nodes the script runs:

Example

```
[root@basecm10~]# cat /path/to/my/collection
#!/usr/bin/python

import sys
import json
import random

def initialize(entity):
    metric = {"metric": "my.collection.metric",
              "entity": entity,
              "unit": "B",
              "class": "My/Collection"}
    check = {"check": "my.collection.check",
             "entity": entity,
             "class": "My/Collection"}
    return [metric, check]

def sample(entity):
    metric = {"metric": "my.collection.metric",
              "entity": entity,
              "value": random.randint(0, 32767)}
    check = {"check" : "my.collection.check",
             "entity": entity,
             "value" : 'PASS' if random.randint(0, 32767) > 8000 else 'FAIL'}
```

```

    return [metric, check]

def main():
    try:
        # determine for which node we are sampling
        entity = os.environ['CMD_HOSTNAME']
    except:
        sys.stderr.write('Target device not specified in environment\n')
        return

    if len(sys.argv) > 1 and sys.argv[1] == "--initialize":
        data = initialize(entity)
    else:
        data = sample(entity)
    print (json.dumps(data, indent=4))

if __name__ == '__main__':
    main()

```

It can be defined with a filter to run on the active head for all nodes in the GPU category:

Example

```

[basecm10]% monitoring setup
[basecm10->monitoring->setup]% add collection my-collection
[...my-collection]% set script /path/to/my/collection
[...my-collection]% set format JSON
[...my-collection]% set interval 1m
[...my-collection]% nodeexecutionfilters
[...nodeexecutionfilters]% active
Added active resource filter
[...nodeexecutionfilters]% exit
[...my-collection]% executionmultiplexers
[...executionmultiplexers]% add category
[...executionmultiplexers*[GPU*]% add category GPU
[...executionmultiplexers*[GPU*]% commit

```

The script is then executed on the head, once for each node in the category of GPU.

2.12 Collection Monitoring Data Producers For Standalone Entities

Sometimes monitoring data does not belong to a BCM entity.

For this reason the standalone monitored entity was added in NVIDIA Base Command Manager 8.0.

This entity can be anything with a name and custom type.

BCM does nothing with this kind of entity, except allow it to store monitoring data.

Each standalone entity which needs to be monitored should be added:

Example

```

[basecm10]% monitoring standalone
[basecm10->monitoring->standalone]% add MSD.0
[...standalone*[MSD.0*]]% set type Lustre
[...standalone*[MSD.0*]]% commit
[...standalone*[MSD.0*]]% add MSD.1
[...standalone*[MSD.1*]]% set type Lustre
[...standalone*[MSD.1*]]% commit

```

A script can be created that produces data for all MSD entities:

Example

```
[root@basecm10 ~]# cat /path/to/my/collection
#!/usr/bin/python

import sys
import json

def initialize():
    msd_0 = {"metric": "lustre.free.space",
            "entity": "MSD.0",
            "unit": "B",
            "class": "Lustre"}
    msd_1 = {"metric": "lustre.free.space",
            "entity": "MSD.1",
            "unit": "B",
            "class": "Lustre"}
    return [msd_0, msd_1]

def sample():
    msd_0 = {"metric": "lustre.free.space",
            "entity": "MSD.0",
            "value": 12345}
            "class": "Lustre"}
    msd_1 = {"metric": "lustre.free.space",
            "entity": "MSD.1",
            "value": 54321}
    return [msd_0, msd_1]

def main():
    if len(sys.argv) > 1 and sys.argv[1] == "--initialize":
        data = initialize()
    else:
        data = sample()
    print (json.dumps(data, indent=4))

if __name__ == '__main__':
    main()
```

It can be defined to run on only the active head node:

Example

```
[basecm10]% monitoring setup
[basecm10->monitoring->setup]% add collection my-collection
[...my-collection]% set script /path/to/my/collection
[...my-collection]% set format JSON
[...my-collection]% set interval 5m
[...my-collection]% nodeexecutionfilters
[...nodeexecutionfilters]% active
Added active resource filter
[...nodeexecutionfilters]% commit
```

The script is then executed on the active head every 5 minutes and collects one data point for each MSD.

Data for a standalone script can be viewed with the same commands as for regular BCM nodes.

Example

```
[basecm10]% monitoring standalone
[basecm10->monitoring->standalone]% use MSD.0
[...standalone*[MSD.0*]]% latestmetricdata
...
lustre.free.space          12345          3m 47s
```

2.13 Debugging Standalone Scripts

Page 601 of the *Administrator Manual* describes how debugging information can be obtained when running `samplenow` with the `--debug` option with the `ntp healthcheck` script.

Many scripts under `/cm/local/apps/cmd/scripts/` can have their debug output inspected with `samplenow --debug`.

A recursive `grep` on the head node, similar to the following, should show which scripts have a settable debug environment:

```
grep -r CMD_DEBUG /cm/local/apps/cmd/scripts/
```

The debug output in the script can be specified along the lines of the following code snippet:

Example

```
debug = os.environ.get('CMD_DEBUG', '0') == '1'
if debug:
    # print stuff to fd 3
```

3

Monitoring Actions

This chapter covers how to manage monitoring-driven actions with `cmsh`.

3.1 Actions And Triggers

A monitoring action is a script that is executed by `CMDaemon`. It runs when triggered by the monitored data.

An action by itself does nothing—it needs a trigger (section 12.4.5 of the *Administrator Manual*) to be defined to execute the action.

By default, several actions (section 12.4.4 of the *Administrator Manual*) are predefined:

- `Drain`: Drain node (node refuses new WLM jobs)
- `Event`: Send an event to users with connected client
- `ImageUpdate`: Update the image on the node
- `PowerOff`: Power off a device
- `PowerOn`: Power on a device:
- `PowerReset`: Power reset a device
- `Reboot`: Reboot a node
- `Send e-mail to administrators`: Send e-mail
- `Shutdown`: Shutdown a node
- `Undrain`: Undrain node (node accepts new WLM jobs)
- `killprocess`: `/cm/local/apps/cmd/scripts/actions/killprocess.pl`
- `remount`: `/cm/local/apps/cmd/scripts/actions/remount`
- `testaction`: `/cm/local/apps/cmd/scripts/actions/testaction`

A new action script can be created as follows:

Example

```
[basecm10]% monitoring action
[basecm10->monitoring->action]% add script MyScript
[...MyScript*]% set script /path/to/MyScript
[...MyScript*]% commit
```

3.2 Time Restrictions

It is possible to allow actions to only be executed at certain times, with the `allowedtime` setting.

Example

```
[basecm10]% monitoring action
[basecm10->monitoring->action]% add script MyScript
[...MyScript*]% set script /path/to/MyScript
[...MyScript*]% set allowedtime "9:00-17:00"
[...MyScript*]% commit
```

More complex timing restrictions are possible:

Example

```
monday-friday9:00-17:00
monday-friday00:00-09:00;17:00-00:00;saturday-sunday
november-marchmonday-saturday13:00-17:00
may-septembermonday-friday09:00-18:00;saturday-sunday13:00-17:00
```

Further examples can be seen in section 12.4.4 of the *Administrator Manual*, page 574.

3.2.1 Time Restriction Syntax In BNF Notation

The allowed values can be written as a BNF grammar:

Example

```
<start> =
    time_intervals
    | ""
<time_intervals> = <time_interval> (; <time_interval>)*
<time_interval> = <inner_time_interval>{<time_intervals>}
<inner_time_interval> =
    <day_of_week_interval>
    | <time_of_day_interval>
    | <day_of_month_interval>
    | <month_interval>
<day_of_week_interval> =
    (<day_of_week>-<day_of_week>)
    | (<day_of_week> (, <day_of_week>)*
<day_of_week> = sunday | monday | tuesday | wednesday | thursday | friday | saturday
<time_of_day_interval> = <time_of_day>-<time_of_day>

```

3.3 CMDaemon Environment Variables

3.3.1 Standard Environment Variables Available In Action Scripts

Name	Description
CMD_ENTITY_KEY	The unique key of the entity that triggered the action.
CMD_ENTITY_NAME	The name of the entity that triggered the action.
CMD_ENTITY_TYPE	The type of entity that triggered the action.
CMD_MEASURABLE_NAME	The name of the measurable that triggered the action.
CMD_MEASURABLE_PARAMETER	The parameter of the measurable that triggered the action.
CMD_MEASURABLE_TYPE	The type of the measurable.
CMD_VALUE	The value that triggered the action.
CMD_RAW_VALUE	The raw value.
CMD_VALUE_TIME	The time on which the value was measured.
CMD_INFO_MESSAGE	Extra information sampled along with the value.
CMD_PRODUCER_NAME	The name of the monitoring data producer that samples the measurable.

...continues

...continued

Name	Description
CMD_ACTION_NAME	The name of the action that was triggered.
CMD_TRIGGER_NAME	The name of the trigger.
CMD_TRIGGER_EXPRESSION	The expression that was evaluated.
CMD_VALUE_EVAL	The result of the evaluated expression.
CMD_VALUE_COUNT	The number of times the expression evaluated to the same value.
CMD_SEVERITY	The assigned severity of the trigger.

All action scripts have the preceding standard environment variables set.

In `cmsh`, if the action object has its `node environment` parameter set to the value `yes`, then scripts running on a node are enabled with an extended environment that provides many more `CMD_*` environment variables. Otherwise they run in the standard environment.

A list of the standard or extended environment variables can be dumped by running the system command `env > /tmp/dumpfile` within an action script, such as the test example script, and triggering the script to run.

Many of the environment variables are similar to the ones used by `initialize` and `finalize` scripts (section E.3 of the *Administrator Manual*) in the `node-installer` environment.

3.3.2 Extended Environment Variables Available To Action Scripts

If the action object has its `node environment` parameter set to the value `yes`, then scripts run in an extended environment that provides many more `CMD_*` environment variables. Otherwise they run in the standard environment of section 3.3.1.

The following table shows the additionally available environment variables with some example values:

Table 3.3.2: Environment Variables For Nodes In The Extended Environment

CMDaemon REST API

Some data from CMDaemon can be accessed via its REST API.

The REST API only allows data to be retrieved at the time of writing of this section (October 2018). Data cannot currently be updated or removed.

4.1 Authentication, And Definition Of *<curlauth>*

Two forms of authentication are supported:

- Basic: HTTP authentication (`--basic` option of `curl`)
- Certificate: Certificate-based authentication (`--cert` option of `curl`). Certificate-based authentication is covered in section 6.4.2 of the *Administrator Manual*.

The following three commands give identical results:

```
[alice@basecm10 ~]$ curl -k --basic --user "alice:password" "https://master:8081/rest"
[alice@basecm10 ~]$ curl -k --basic --user "alice:$(path to password file)" "https://master:8081/rest"
[alice@basecm10 ~]$ curl --cert ~/.cm/cert.pem --key ~/.cm/cert.key -k "https://master:8081/rest"
```

For security, it is best to use the certificate key-based version.

For convenience, the command and authority parts of the preceding three commands—that is the string in the line that includes the text from `curl` to `8081` in the three `curl` commands—is designated by *<curlauth>* in this chapter. Thus, each of the commands can be represented by:

Example

```
[alice@basecm10 ~]$ <curlauth>/rest"
```

This allows the reader to focus on the path segment and variables part of the API.

4.2 Browsing The API

A summary diagram of the REST API is shown in figure 4.1:

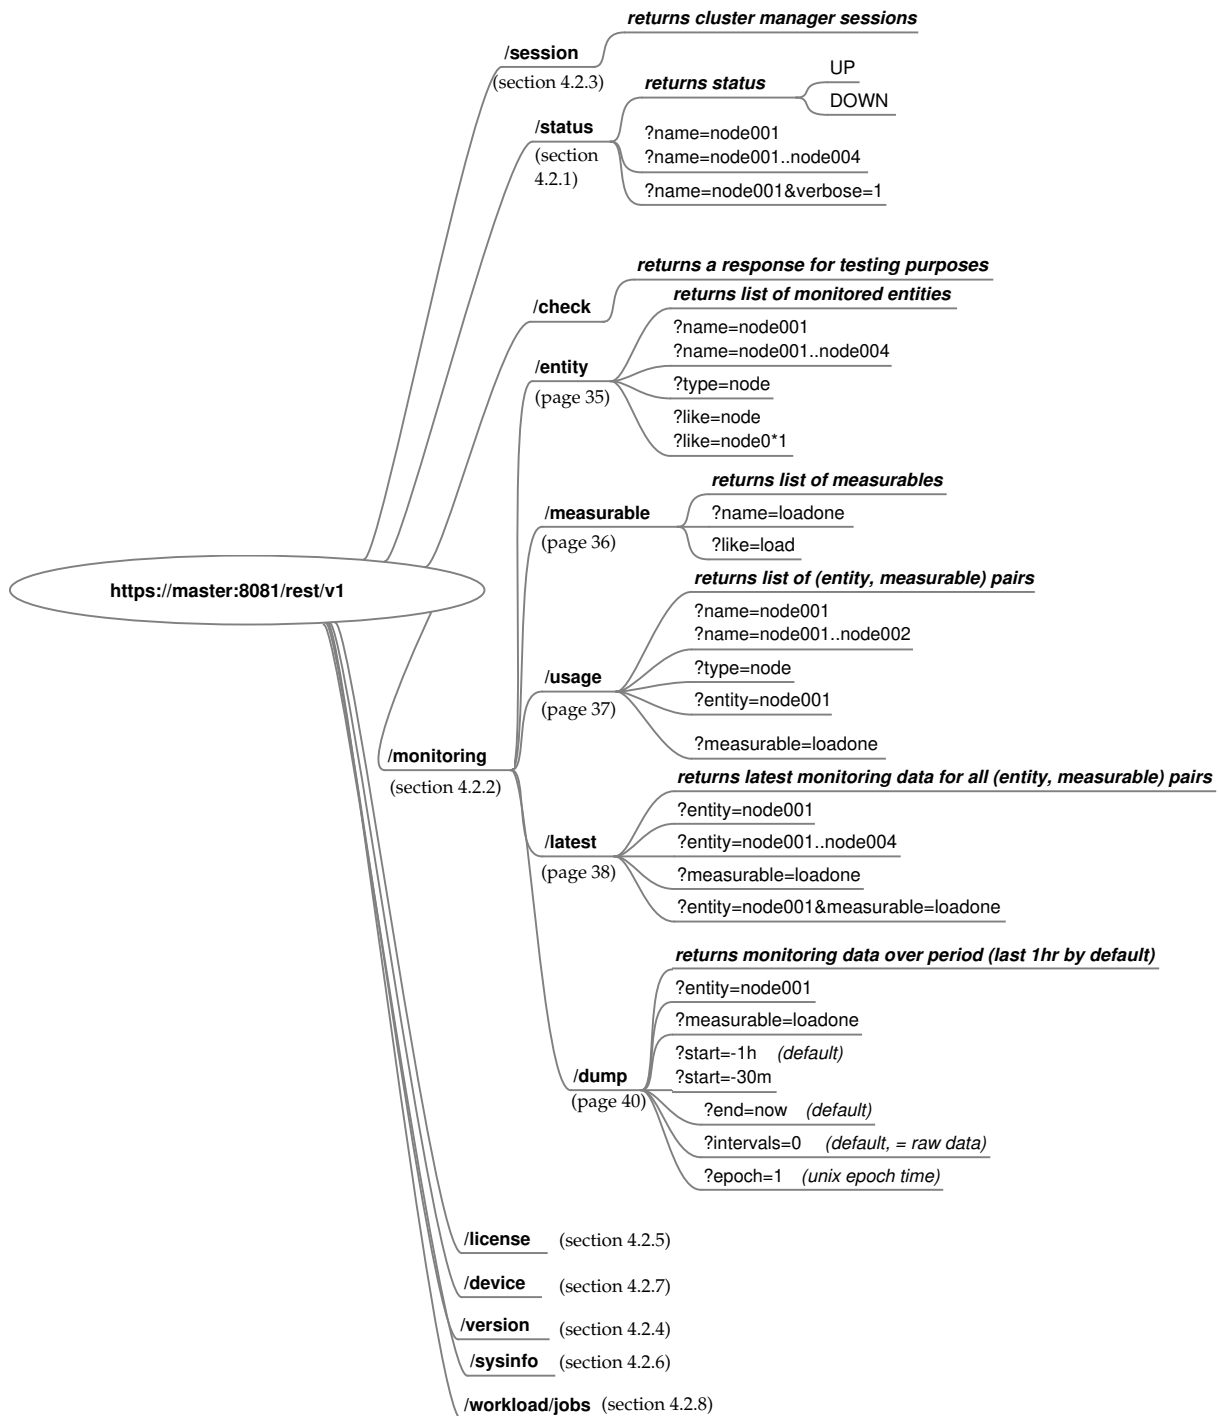

Figure 4.1: REST API Summary Tree

The remainder of this section elaborates upon the diagram.

The API directory structure is documented within the directory itself.

A GET operation on the main /rest entry point can list all subdirectories:

Example

```
[alice@basecm10 ~]$ <curlauth>/rest"
["v1"]
```

New lines are not part of the output by default. Setting a parameter of 1 or 2 for the indent variable uses newlines and an indentation of one or two spaces, which makes the API output more readable for all API resource paths.

Example

```
[alice@basecm10 ~]$ <curlauth>/rest?indent=1"  
[  
  "v1"  
]
```

Appending /v1 to the URL gives the functionality available in the first version of the REST API.

Example

```
[alice@basecm10 ~]$ <curlauth>/rest/v1?indent=1"  
[  
  "monitoring",  
  "status",  
  "session",  
  "check",  
  "version",  
  "license",  
  "sysinfo",  
  "device",  
  "workload",  
  "event"  
]
```

Appending /monitoring to the URL lists the subdirectory functionality available for monitoring.

Example

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring?indent=1"  
[  
  "entity",  
  "measurable",  
  "latest",  
  "dump",  
  "usage"  
]
```

4.2.1 Returning A Status Using /v1/status

The status resource path returns the UP/DOWN status for all devices:

Example

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/status?indent=2"  
[  
  {  
    "hostname": "basecm10",  
    "status": "UP"  
  },  
  {  
    "hostname": "node001",  
    "status": "UP"  
  },  
]
```

```
{
  "hostname": "node002",
  "status": "DOWN"
}
```

The status can also be requested for a single device:

Example

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/status?name=node001&indent=2"
[
  {
    "hostname": "node001",
    "status": "UP"
  }
]
```

The “two dots” list specification format (section 2.5.5 of the *Administrator Manual*) used in Base View and cmsh can also be used in the API:

Example

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/status?name=node001..node002&indent=2"
[
  {
    "hostname": "node001",
    "status": "UP"
  },
  {
    "hostname": "node002",
    "status": "DOWN"
  }
]
```

For more detailed information, the verbose parameter can be added (output truncated):

Example

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/status?verbose=1&indent=2"
[
  {
    "health_check_failed": true,
    "health_check_unknown": false,
    "hostname": "basecm10",
    "provisioning_failed": false,
    "restart_required": false,
    "status": "UP"
  },
  {
    "health_check_failed": true,
    "health_check_unknown": false,
    "hostname": "node001",
    "provisioning_failed": false,
    ...
  }
]
```

4.2.2 Monitoring Using /v1/monitoring

Entities Via /v1/monitoring/entity

The entity resource returns information about the entities that are known to the monitoring system. It is possible for an entity known to the monitoring system to have no data.

Example

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/entity?indent=1"
{
  "entities": [
    {
      "key": 12884901889,
      "name": "default",
      "type": "Category"
    },
    {
      "key": 17179869185,
      "name": "globalnet",
      "type": "Network"
    },
    {
      "key": 17179869186,
      "name": "internalnet",
      "type": "Network"
    },
    ...
  ]
}
[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/entity?name=node001&indent=1"
{
  "entities": [
    {
      "key": 38654705666,
      "name": "node001",
      "type": "PhysicalNode"
    }
  ]
}
[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/entity?type=node&indent=1"
{
  "entities": [
    {
      "key": 38654705665,
      "name": "basecm10",
      "type": "HeadNode"
    },
    {
      "key": 38654705666,
      "name": "node001",
      "type": "PhysicalNode"
    },
    {
      "key": 38654705667,
      "name": "node002",
      "type": "PhysicalNode"
    }
  ]
}
```

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/entity?name=node001..node002&indent=1"
{
  "entities": [
    {
      "key": 38654705666,
      "name": "node001",
      "type": "PhysicalNode"
    },
    {
      "key": 38654705667,
      "name": "node002",
      "type": "PhysicalNode"
    }
  ]
}
```

A regex matcher can be used to find entities based on a name match:

Example

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/entity?like=lobal&indent=1"
{
  "entities": [
    {
      "key": 17179869185,
      "name": "globalnet",
      "type": "Network"
    }
  ]
}

[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/entity?like=nod.0*1&indent=1"
{
  "entities": [
    {
      "key": 38654705666,
      "name": "node001",
      "type": "PhysicalNode"
    }
  ]
}
```

Measurables Via /v1/monitoring/measurable

This entry returns information about the defined measurables.

Example

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/measurable?indent=1"
{
  "measurables": [
    {
      "key": 261993005057,
      "name": "IpForwDatagrams",
      "type": "metric"
    },
    {
      "key": 261993005058,
```

```

    "name": "IpFragCreates",
    "type": "metric"
  },
  {
    "key": 261993005059,
    "name": "IpFragFails",
    "type": "metric"
  },
  ...typically hundreds more lines...

```

```

[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/measurable?name=loadone&indent=1"
{
  "measurables": [
    {
      "key": 261993005138,
      "name": "LoadOne",
      "type": "metric"
    }
  ]
}
[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/measurable?like=load&indent=1"
{
  "measurables": [
    {
      "key": 261993005136,
      "name": "LoadFifteen",
      "type": "metric"
    },
    {
      "key": 261993005137,
      "name": "LoadFive",
      "type": "metric"
    },
    {
      "key": 261993005138,
      "name": "LoadOne",
      "type": "metric"
    }
  ]
}

```

Data Usage Via /v1/monitoring/usage

The usage resource is intended to show which (entity, measurable) pairs have data. For example, nodes with only 1 disk do not have data, if their associated measurables have the string `sdb` in their name.

To get the complete usage:

Example

```

[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/usage?indent=1"
{
  "data": [
    {
      "entity": "default",
      "measurable": "CoresTotal"
    },
    {

```

```
"entity": "default",
"measurable": "CoresUp"
},
...typically hundreds more lines...
```

It is also possible to get all the measurables for which a specific entity, such as node001, has data.

Example

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/usage?entity=node001&indent=1"
{
  "data": [
    {
      "entity": "node001",
      "measurable": "IpForwDatagrams"
    },
    {
      "entity": "node001",
      "measurable": "IpFragCreates"
    },
    {
      "entity": "node001",
      "measurable": "IpFragFails"
    },
    ...typically hundreds more lines...
```

Or all entities which have data for a specific measurable such as loadone:

Example

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/usage?measurable=loadone&indent=1"
{
  "data": [
    {
      "entity": "basecm10",
      "measurable": "LoadOne"
    },
    {
      "entity": "node001",
      "measurable": "LoadOne"
    }
  ]
}
```

The Latest Monitoring Data Via /v1/monitoring/latest

The latest resource can be used to retrieve the last known sampled data points.

It is possible to get the latest monitoring data for all (entity, measurable) pairs.

This may result in a lot of information: about 125 bytes per (entity, measurable) pair.

Example

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/latest?indent=1"
{
  "data": [
    {
```

```

    "age": 47.868,
    "entity": "default",
    "measurable": "CoresTotal",
    "raw": 1.0,
    "time": 1540476088861,
    "value": "1"
  },
  {
    "age": 47.868,
    "entity": "default",
    "measurable": "CoresUp",
    "raw": 1.0,
    "time": 1540476088861,
    "value": "1"
  },
  {
    "age": 47.868,
    "entity": "default",
    "measurable": "NodesClosed",
    "raw": 0.0,
    "time": 1540476088861,
    "value": "0"
  },
  {
    "age": 47.868,
    "entity": "default",
    "measurable": "NodesDown",
    "raw": 0.0,
    "time": 1540476088861,
    "value": "0"
  },
  ...typically thousands more lines...

```

The latest data can be requested for a selection of entities and measurables.

Example

```

[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/latest?entity=node001&indent=1"
{
  "data": [
    {
      "age": 138.625,
      "entity": "node001",
      "measurable": "IpForwDatagrams",
      "raw": 0.0,
      "time": 1540476100389,
      "value": "0/s"
    },
    {
      "age": 138.625,
      "entity": "node001",
      "measurable": "IpFragCreates",
      "raw": 0.0,
      "time": 1540476100389,
      "value": "0/s"
    }
  ]
}

```

```

    },
    {
      "age": 138.625,
      "entity": "node001",
      "measurable": "IpFragFails",
      "raw": 0.0,
      "time": 1540476100389,
      "value": "0/s"
    },
    ...typically hundreds more lines...

```

```

[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/latest?entity=node001..node004&indent=1"
...as for previous output but for the range of nodes001..node004...

```

```

[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/latest?measurable=LoadOne&indent=1"
{
  "data": [
    {
      "age": 114.099,
      "entity": "basecm10",
      "measurable": "LoadOne",
      "raw": 0.03,
      "time": 1540476351361,
      "value": "0.03"
    },
    {
      "age": 155.07,
      "entity": "node001",
      "measurable": "LoadOne",

      "raw": 0.0,
      "time": 1540476790390,
      "value": "0"
    }
  ]
}

```

Historic Data Dump Via /v1/monitoring/dump

Dumping historic data can be done using the entry point:

Example

```

[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/dump?<options>"

```

The dump resource has several options:

- `entity`: name or range of entities
- `measurable`: name of the measurable
- `start`: time to be plotted (default: -1h)
- `end`: end to be plotted (default: now)
- `intervals`: number of interpolation intervals (default: 0, raw data)
- `epoch`: display timestamps as unix epoch (default: 0)

The time specification format is the same one used for the `dumpmonitoringdata` command (section 12.6.4 of the *Administrator Manual*).

To prevent gigabytes of data being retrieved when no options are specified, `entity` and `measurable` must be specified.

If there is a need to dump all the monitoring data, then it can be done by specifying empty strings for both `entity` and `measurable`. For example, the following command dumps all raw data for the default last hour:

Example

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/dump?entity=&measurable=?indent=1"
{
  "data": [
    {
      "entity": "default",
      "measurable": "CoresTotal",
      "raw": 1.0,
      "time": "2018/10/25 13:15:28",
      "value": "1"
    },
    {
      "entity": "default",
      "measurable": "CoresTotal",
      "raw": 1.0,
      "time": "2018/10/25 16:35:28",
      "value": "1"
    },
    {
      "entity": "default",
      "measurable": "CoresUp",
      "raw": 1.0,
      "time": "2018/10/25 13:49:28",
      "value": "1"
    },
    ...typically thousands more lines...
```

4.2.3 Session Using `/v1/session`

The response to the `sessions` method is similar to the output from listing in `session` mode of `cmsh` (`cmsh -c "session list"`)

The method lists the sessions that the cluster manager is involved with.

Example

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/session?indent=1"
[
```

```
{
  "address": "127.0.0.1",
  "group": "admin",
  "node": "basecm10",
  "type": "node",
  "username": ""
},
{
  "address": "10.141.255.254",
  "group": "admin",
  "type": "node",
  "username": ""
},
{
  "address": "10.141.0.1",
  "group": "node",
  "node": "node001",
  "type": "node",
  "username": ""
},
{
  "address": "10.141.0.2",
  "group": "node",
  "node": "node002",
  "type": "node",
  "username": ""
}
}
```

4.2.4 Version Using /v1/version

The version method returns version parameters.

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/version?indent=1"
{
  "build_hash": "daf30669f1",
  "build_index": 152175,
  "cm_version": "9.2",
  "cmd_version": "2.2",
  "database_version": 36280
}
```

4.2.5 License Using /v1/license

The license method returns license parameters.

Example

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/license?indent=1"
{
  "acceleratorNodeCount": 0,
  "accountingAndReporting": true,
  "baseType": "LicenseInfo",
  "burstNodeCount": 0,
  "childType": "",
  "edgeSites": true,
  "edition": "Advanced",
  "endTime": 2177449140,
  "licenseType": "Commercial",
}
```

```

"licensedAcceleratorNodes": 80,
"licensedBurstNodes": 1000,
"licensedNodes": 100,
"licensee": "/C=US/ST=None/L=None/O=None/OU=None/CN=basecm10",
"macAddress": "FA:16:3E:3B:94:98",
"message": "",
"modified": false,
"nodeCount": 3,
"oldLocalUniqueKey": 0,
"refPartitionUniqueKey": 21474836481,
"revision": "",
"serial": 1017214,
"startTime": 1508108400,
"toBeRemoved": false,
"uniqueKey": 281474976710653,
"version": "7.0 and above"
}

```

4.2.6 Sysinfo Using /v1/sysinfo

The sysinfo method is similar to the sysinfo command in the device mode of cmsh. It returns information about some basic system hardware parameters.

Example

```

[alice@basecm10 ~]$ <curlauth>/rest/v1/sysinfo?indent=1"
{
  "node001": {
    "baseType": "SysInfoCollector",
    "biosDate": "04/01/2014",
    "biosVendor": "SeaBIOS",
    "biosVersion": "1.13.0-lubuntu1.1",
    "bootIf": "ens3",
    "childType": "",
    "clusterRandomNumber": 6332472641088672013,
    "diskCount": 2,
    "diskTotalSpace": 10745806848,
    "disks": [
      {
        "baseType": "DiskInfo",
        "childType": "",
        "ioScheduler": "[mq-deadline] kyber bfq none",
        "model": "virtio",
        "modified": false,
        "name": "vda",
        "oldLocalUniqueKey": 0,
        "rev": "",
        "revision": "",
        "size": 8388608,
        "toBeRemoved": false,
        "uniqueKey": 281474976710948,
        "vendor": ""
      },
      {
        "baseType": "DiskInfo",
        "childType": "",
        "ioScheduler": "[mq-deadline] kyber bfq none",

```

```

        "model": "virtio",
        "modified": false,
        "name": "vdb",
        "oldLocalUniqueKey": 0,
        "rev": "",
        "revision": "",
        "size": 10737418240,
        "toBeRemoved": false,
        "uniqueKey": 281474976710949,

```

4.2.7 Device Information Using /v1/device

Example

```

[alice@basecm10 ~]$ <curlauth>/rest/v1/device?indent=1"
[
  {
    "cluster": "basecm10",
    "hostname": "basecm10",
    "ip": "10.141.255.254",
    "mac": "FA:16:3E:EF:71:05",
    "network": "internalnet",
    "roles": [
      "backup",
      "storage",

```

```

        "firewall",
        "headnode",
        "monitoring",
        "provisioning",
        "boot"
    ],
    "type": "HeadNode"
},
{
    "category": "default",
    "cluster": "basecm10",
    "hostname": "node001",
    "ip": "10.141.0.1",
    "mac": "FA:16:3E:2B:A4:31",
    "network": "internalnet",
    "type": "PhysicalNode"
},
{
    "category": "default",
    "cluster": "basecm10",
    "hostname": "node002",
    "ip": "10.141.0.2",
    "mac": "FA:16:3E:D4:C8:5A",
    "network": "internalnet",
    "type": "PhysicalNode"
}
]

```

4.2.8 WLM Information Using /v1/workload

Currently the workload path takes the jobs resource.

Example

```

[alice@basecm10 ~]$ <curlauth>/rest/v1/workload/jobs?indent=1"
[
{
    "account": "projecty",
    "group": "alice",
    "job_id": "2301",
    "job_name": "iozone",
    "nodes": [
        "node001"
    ],
    "queue": "defq",
    "run_time": "4m 39s",
    "start_time": "2023/06/08 14:24:53",
    "state": "RUNNING",
    "submit_time": "2023/06/08 14:24:53",
    "user": "alice"
},
{
    "account": "projectx",
    "group": "charlie",
    "job_id": "2306",
    "job_name": "sleep",
    "nodes": [

```

```
    "node001"
  ],
  "queue": "defq",
  "run_time": "3m 34s",
  "start_time": "2023/06/08 14:25:58",
  "state": "RUNNING",
  "submit_time": "2023/06/08 14:25:57",
  "user": "charlie"
},
{
  "account": "projecty",
  "group": "alice",
  "job_id": "2307",
  "job_name": "iozone",
  ...
}
```

5

NVIDIA Base Command Manager JSON API

This chapter gives an alphabetical list of the JSON API services and entities available for NVIDIA Base Command Manager. The API reference documentation for all available services and entities is available on the head node at:

`/cm/local/apps/cmd/etc/htdocs/userportal/download/json/index.html`.

It can also be accessed via the user portal of the cluster by clicking on the `JSON API documentation` link in the documentation section of the home page (Section 12.8.4 of the *Administrator Manual*).

Some examples of JSON usage are given in section 5.3

5.1 Services

- 5.1.1 `auth`
- 5.1.2 `beegfs`
- 5.1.3 `ceph`
- 5.1.4 `cert`
- 5.1.5 `cloud`
- 5.1.6 `device`
- 5.1.7 `etcd`
- 5.1.8 `gui`
- 5.1.9 `job`
- 5.1.10 `keyvalue`
- 5.1.11 `kube`
- 5.1.12 `main`
- 5.1.13 `mon`
- 5.1.14 `net`
- 5.1.15 `part`
- 5.1.16 `proc`
- 5.1.17 `prov`
- 5.1.18 `serv`
- 5.1.19 `session`
- 5.1.20 `status`
- 5.1.21 `test`
- 5.1.22 `user`

5.2 Entities

5.2.1 AccessSettings: Entity

parent: Entity

Parameter: username

Type: string

Description: Username for ssh and/or REST API

Parameter: password

Type: string

Description: Password for ssh and/or REST API

Parameter: rest_port

Type: unsigned integer

Description: Rest port, set to 0 to disable all REST calls

5.2.2 AMDGPUSettings: GPUSettings

parent: GPUSettings

Parameter: gpuClockLevel

Type: unsigned integer

Description: Set the GPU clock frequency level

Parameter: memoryClockLevel

Type: unsigned integer

Description: Set the GPU memory clock frequency level

Parameter: powerPlay

Type: enum

Description: Set powerplay level

Parameter: gpuOverDrive

Type: float

Description: This sets the percentage above maximum for the max performance Level

Parameter: memoryOverDrive

Type: float

Description: This sets the percentage above maximum for the max performance Level

Parameter: fanSpeed

Type: unsigned integer

Description: Fan speed value

Parameter: minimalGPUClock

Type: unsigned integer

Description: Minimum GPU clock speed

Parameter: minimalMemoryClock

Type: unsigned integer

Description: Minimum GPU Memory clock speed

Parameter: activityThreshold

Type: float

Description: Workload required before clock levels change

Parameter: hysteresisUp

Type: float

Description: Delay before clock level is increased

Parameter: hysteresisDown

Type: float

Description: Delay before clock level is decreased

5.2.3 ANFVolume: Entity

parent: Entity

Parameter: id

Type: string

Description: Unique identifier

Parameter: name

Type: string

Description: Name of the ANF volume.

Parameter: owner

Type: string

Description: Owner of the Azure NetApp pool and volume

Parameter: resourceGroup

Type: string

Description: The resource group where the volume was created

Parameter: netAppAccount

Type: string

Description: The NetApp account name where the volume was created

Parameter: location

Type: string

Description: The Azure location where the volume was created

Parameter: size

Type: unsigned integer

Description: Volume size. Should be at least 4 TiB.

Parameter: status

Type: string

Description: Status of the volume

Parameter: mountPath

Type: string

Description: String containing IP and mount path of the volume

Parameter: management

Type: enum

Description: Volume management type

Parameter: creationTime

Type: string

Description: Creation time

Parameter: sharedWith

Type: list of strings

Description: Other cmjob users that can use this volume for jobs.

5.2.4 ArchOS: ArchOSInfo

parent: ArchOSInfo

Parameter: primaryImage

Type: reference to SoftwareImage or None

Description: Image used to boot new nodes and keep /cm/shared up to date, empty if head node is to be used

Parameter: shared

Type: reference to FSPart or None

Description: Shared directory

Parameter: installer

Type: reference to FSPart or None

Description: Node installer

Parameter: priority

Type: unsigned integer

Description: Priority

5.2.5 ArchOSInfo: Entity

parent: Entity

Parameter: arch

Type: enum

Description: Architecture

Parameter: os

Type: enum

Description: Operating system

5.2.6 AWSIntermediateStorage: CMJobIntermediateStorage

parent: CMJobIntermediateStorage

Parameter: bucket

Type: string

Description: S3 Bucket name

Parameter: folder

Type: string

Description: Folder name to place data into

Parameter: region

Type: string

Description: Region for S3 bucket

Parameter: maxFSxInstanceCapacity

Type: unsigned integer

Description: Maximum FSx instance size that user can request.

Parameter: maxFSxInstanceCountPerUser

Type: unsigned integer

Description: Maximum amount of FSx instances that a user can have simultaneously.

Parameter: defaultFSxInstanceCapacity

Type: unsigned integer

Description: Default capacity of an FSx instance, used if not specified during creation.

Parameter: securityGroupFSx

Type: string

Description: Security group ID of the FSx instances

5.2.7 AzureDataDisk: AzureDisk

parent: AzureDisk

Parameter: lun

Type: unsigned integer

Description: Logical unit number of a block device to be attached

Parameter: removeOnTermination

Type: boolean

Description: If true, the drive will be removed when the instance it is attached to gets terminated

5.2.8 AzureDisk: Entity

parent: Entity

Parameter: name

Type: string

Description: Name of the data disk

Parameter: size

Type: unsigned integer

Description: Size of the drive

Parameter: image

Type: string

Description: URL to a source image for the disk

Parameter: storageAccountName

Type: string

Description: Name of a storage account to hold the disk

Parameter: imageContainerName

Type: string

Description: If the disk has the image url set, the image will be copied to a container with this name

Parameter: containerName

Type: string

Description: Name of a container in storage account to hold the disk

Parameter: managedDiskParameters

Type: AzureManagedDiskParameters

Description: Azure Managed Disk parameters

5.2.9 AzureExtension: Entity

parent: Entity

Parameter: name

Type: string

Description: User-defined name of the private cloud

Parameter: location

Type: reference to AzureLocation

Description: Region of the cluster extension

Parameter: resourceGroup

Type: string

Description: Azure resource group name for all resources in the extension

Parameter: network

Type: reference to Network

Description: Network associated with the extension

Parameter: extraField

Type: list of strings

Description: Reserved

5.2.10 AzureIntermediateStorage: CMJobIntermediateStorage

parent: CMJobIntermediateStorage

Parameter: storageAccountId

Type: string

Description: Azure storage account ID

Parameter: accessKey

Type: string

Description: Azure storage account access key

Parameter: container

Type: string

Description: Container name to place data into

Parameter: netAppSubnetId

Type: string

Description: Azure ID for the delegated subnet where ANF volumes will be created

Parameter: netAppResourceGroupName

Type: string

Description: Resource group where the NetApp account is located

Parameter: netAppAccountName

Type: string

Description: Name of the NetApp account to create ANF volumes

Parameter: netAppServiceLevel

Type: string

Description: Service Level for newly created ANF volumes

Parameter: maxANFVolumeCapacity

Type: unsigned integer

Description: Maximum ANF volume size that user can request.

Parameter: maxANFVolumeCountPerUser

Type: unsigned integer

Description: Maximum amount of ANF volumes that a user can have simultaneously.

Parameter: defaultANFVolumeCapacity

Type: unsigned integer

Description: Default capacity of an ANF volume, used if not specified during creation.

5.2.11 AzureLocation: CloudRegion

parent: CloudRegion

5.2.12 AzureManagedDiskParameters: Entity

parent: Entity

Parameter: id

Type: string

Description: Managed disks resource ID

Parameter: storageAccountType

Type: string

Description: Storage account type for managed disks

5.2.13 AzureOSDisk: AzureDisk

parent: AzureDisk

Parameter: cachingType

Type: enum

Description: Disk caching type

5.2.14 AzureProvider: CloudProvider

parent: CloudProvider

Parameter: subscriptionId

Type: string

Description: Azure Subscription ID.

Parameter: clientId

Type: string

Description: Azure Client ID.

Parameter: clientSecret

Type: string

Description: Azure Client Secret.

Parameter: tenantId

Type: string

Description: Tenant ID.

Parameter: cloudName

Type: string

Description: Azure Cloud Name. Used to access non-public regions.

Parameter: defaultLocation

Type: reference to AzureLocation or None

Description: Default location to start virtual machine in.

Parameter: defaultVMSize

Type: reference to AzureVMSize or None

Description: Default cloud node VM size.

Parameter: defaultDirectorVMSize

Type: reference to AzureVMSize or None

Description: Default cloud director VM size.

Parameter: defaultHyperVGeneration

Type: enum

Description: Hyper-V generation to use by default (V1 or V2), see <https://docs.microsoft.com/en-us/azure/virtual-machines/generation-2>

Parameter: extensions

Type: list of AzureExtension

Description: List of extensions

Parameter: regions

Type: list of references to AzureLocation

Description: *none*

Parameter: defaultNodeInstallerImage

Type: string

Description: Default node-installer image, can be overridden in the OS disk.

Parameter: marketplaceUsePolicy

Type: enum

Description: Preference towards using marketplace images

Parameter: freeImageType

Type: enum

Description: What kind of image to use for cloud nodes within the license

5.2.15 AzureSettings: CloudSettings

parent: CloudSettings

Parameter: instanceId

Type: string

Description: Instance-ID provided by Azure

Parameter: availabilitySetName

Type: string

Description: Availability set name

Parameter: nicId

Type: string

Description: Network interface identifier

Parameter: externalIP

Type: IP

Description: The external IP address as set by the cloudprovider

Parameter: useKernelAndInitrdFromTheSoftwareImage

Type: boolean

Description: Make the cloud node's node-installer download the kernel and the initrd from the software image configured for this cloud node and then reboot the cloud node to use those, instead of using the kernel and initrd already present on the node-installer's cloud image.

Parameter: location

Type: reference to AzureLocation or None

Description: Virtual Machine location

Parameter: resourceGroupName

Type: string

Description: Azure Resource Group Name

Parameter: storageAccountName

Type: string

Description: Name of a storage account where boot diagnostics will be stored for this instance

Parameter: deploymentName

Type: string

Description: Name of the Azure deployment associated with this node

Parameter: publicIpName

Type: string

Description: Name of a public ip object to be assigned to the node

Parameter: VMSize

Type: reference to AzureVMSize or None

Description: Virtual Machine size

Parameter: hyperVGeneration

Type: enum

Description: Hyper-V generation to use (V1 or V2), see <https://docs.microsoft.com/en-us/azure/virtual-machines/generation-2>

Parameter: disks

Type: list of AzureDisk

Description: Storage disks.

Parameter: availabilityZone

Type: string

Description: Azure Availability zone where all the resources related to this VM will be allocated

Parameter: freeImageType

Type: enum

Description: What kind of image to use for cloud nodes within the license

5.2.16 AzureVMSize: CloudType

parent: CloudType

Parameter: hyperVGenerations

Type: list of strings

Description: Supported Hyper-V generations.

5.2.17 BackupInfo: Entity

parent: Entity

Parameter: ref_source_node_uuid

Type: UUID

Description: Node

Parameter: ref_backup_node_uuid

Type: UUID

Description: Node

Parameter: ref_fspart_uuid

Type: UUID

Description: FSPart

Parameter: timestamp

Type: unsigned integer

Description: Timestamp of the completion of the backup

Parameter: index

Type: unsigned integer

Description: Index of the backup

5.2.18 BackupRole: Role

parent: Role

Parameter: directory

Type: string

Description: Directory where backups for other nodes are saved

Parameter: disabled

Type: boolean

Description: Disabled nodes will no longer be used

Parameter: backupRing

Type: unsigned integer

Description: Only backup to nodes within the same ring

Parameter: maximumNumberOfBackups

Type: unsigned integer

Description: Maximum number of backups this node should be used for, set 0 for unlimited

5.2.19 `BadEntityManagers: Entity`

parent: Entity

Parameter: `ref_node_uuid`

Type: UUID

Description: Node

Parameter: `added`

Type: list of strings

Description: Added

Parameter: `removed`

Type: list of strings

Description: Removed

Parameter: `changed`

Type: list of strings

Description: Changed

Parameter: `error`

Type: string

Description: Error

5.2.20 `BaseNginxRole: Role`

parent: Role

Parameter: `workerConnections`

Type: unsigned integer

Description: Number of worker connections

Parameter: `sendFile`

Type: boolean

Description: Allow files to be sent

Parameter: `tcpNoPush`

Type: boolean

Description: *none*

Parameter: `tcpNoDelay`

Type: boolean

Description: TCP no delay

Parameter: `keepAliveTimeout`

Type: unsigned integer

Description: Keep alive timeout

Parameter: typesHashMaxSize

Type: unsigned integer

Description: Types hash max size

5.2.21 BasicResource: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: dependency

Type: UUID

Description: Dependency on another resource, run this resource on the same node as the dependency

Parameter: exclude

Type: list of unsigned numbers

Description: Do not run this resource on any node running one of the excluded resources

Parameter: disabled

Type: boolean

Description: Disable the resource from being given to any node

Parameter: stopOnRemove

Type: boolean

Description: Automatically stop resource when removed

5.2.22 BeeGFSClientConfig: Entity

parent: Entity

Parameter: ref_beegfs_cluster_uuid

Type: UUID

Description: BeeGFS cluster

Parameter: enableQuota

Type: boolean

Description: Enable quota

Parameter: createHardlinksAsSymlinks

Type: boolean

Description: Create a symlink when an application tries to create a hardlink

Parameter: mountSanityCheck

Type: float

Description: Time in ms server has to respond after mount sanity check

Parameter: `sessionCheckOnClose`

Type: `boolean`

Description: Check for valid sessions on storage server when a file is closed

Parameter: `syncOnClose`

Type: `boolean`

Description: Sync file content on close

Parameter: `targetOfflineTimeout`

Type: `unsigned integer`

Description: Timeout until all storage targets are considered offline when no target state updates can be fetched from management server

Parameter: `updateTargetStatesTime`

Type: `float`

Description: Interval for storage targets states check

Parameter: `enableXAttrs`

Type: `boolean`

Description: Enable xattrs

Parameter: `enableACLs`

Type: `boolean`

Description: Enable ACLs

Parameter: `fileCacheType`

Type: `string`

Description: File read/write cache type

Parameter: `preferredMetaFile`

Type: `string`

Description: Path to a file with preferred metadata servers

Parameter: `preferredStorageFile`

Type: `string`

Description: Path to a file with preferred storage targets

Parameter: `preferredMetadataServers`

Type: `list of strings`

Description: Preferred metadata server IDs

Parameter: `preferredStorageServers`

Type: `list of strings`

Description: Preferred metadata server IDs

Parameter: `remoteFSync`

Type: `boolean`

Description: Should fsync be executed on server to flush cached file

Parameter: useGlobalAppendLocks

Type: boolean

Description: Should files, opened in append mode, be protected by locks on local machine (YES) or on servers (NO)

Parameter: useGlobalFileLocks

Type: boolean

Description: Should advisory locks be checked on local machine (YES) or on servers (NO)

Parameter: connectionSettings

Type: BeeGFSClientConnectionSettings

Description: Submode containing BeeGFS client connection settings

Parameter: logType

Type: enum

Description: Send log messages to the helper daemon or syslog to send them to the system logger

Parameter: level

Type: unsigned integer

Description: Log level

Parameter: addClientId

Type: boolean

Description: Defines whether the ClientID should appear in each log line

Parameter: helperIp

Type: IP

Description: Defines the IP address of the node on which the beegfs-helperd runs for remote logging

5.2.23 BeeGFSClientConnectionSettings: Entity

parent: Entity

Parameter: portUDP

Type: unsigned integer

Description: UDP port for the client daemon

Parameter: maxInternodeNumber

Type: unsigned integer

Description: Max number of simultaneous connections to the same node

Parameter: communicationRetry

Type: unsigned integer

Description: Time for retries in case of a network failure

Parameter: fallbackExpiration

Type: unsigned integer

Description: Time after which a connection to a fallback interface expires

Parameter: `interfacesFile`

Type: string

Description: Path to the file with a list of interfaces for communication

Parameter: `interfacesList`

Type: list of strings

Description: List of interfaces for communication

Parameter: `maxConcurrentAttempts`

Type: unsigned integer

Description: This may help in case establishing new connections keeps failing and produces fallbacks

Parameter: `netFilterFile`

Type: string

Description: Path to a file with a list of allowed IP subnets

Parameter: `tcpOnlyFilterFile`

Type: string

Description: Path to a file with a list of no-RDMA IP ranges

Parameter: `useRDMA`

Type: boolean

Description: Use RDMA

Parameter: `rdmaBuffersNumber`

Type: unsigned integer

Description: Number of RDMA buffers

Parameter: `rdmaBufferSize`

Type: unsigned integer

Description: Maximum size of a buffer that will be sent over the network

Parameter: `rdmaTypeOfService`

Type: unsigned integer

Description: RDMA type of service

Parameter: `unmountRetries`

Type: boolean

Description: If communication error occurs during unmount, the unsuccessful communications will be retried normally.

5.2.24 BeeGFSCliantRole: Role

parent: Role

Parameter: `configurations`

Type: list of BeeGFSCliantConfig

Description: List of BeeGFS client configurations

5.2.25 BeeGFSCluster: Entity

parent: Entity

Parameter: name

Type: string

Description: Name of the BeeGFS cluster

Parameter: multiMode

Type: boolean

Description: BeeGFS multi mode enabled

Parameter: mountpoint

Type: string

Description: Path to a beegfs filesystem mountpoint

Parameter: authFile

Type: string

Description: Path to the shared secret authentication file

5.2.26 BeeGFSHelperConfig: Entity

parent: Entity

Parameter: ref_beeGFS_cluster_uuid

Type: UUID

Description: BeeGFS cluster

Parameter: runDaemonized

Type: boolean

Description: Run the helper as a daemon

Parameter: workersNumber

Type: unsigned integer

Description: Number of worker threads for helper service

Parameter: connectionSettings

Type: BeeGFSHelperConnectionSettings

Description: Submode containing BeeGFS helper connection settings

Parameter: logSettings

Type: BeeGFSLogSettings

Description: Submode containing BeeGFS logging settings

5.2.27 BeeGFSHelperConnectionSettings: Entity

parent: Entity

Parameter: portTCP

Type: unsigned integer

Description: TCP port for the service

5.2.28 BeeGFSHelperRole: Role

parent: Role

Parameter: configurations

Type: list of BeeGFSHelperConfig

Description: List of BeeGFS helper configurations

5.2.29 BeeGFSLogSettings: Entity

parent: Entity

Parameter: logType

Type: enum

Description: Defines the logger type. This can either be 'syslog' to send log messages to the general system logger or 'logfile'

Parameter: level

Type: unsigned integer

Description: Log level

Parameter: noDate

Type: boolean

Description: Do not show date along with time in log

Parameter: numberOfLines

Type: unsigned integer

Description: Number of lines in log file, after which it will be rotated

Parameter: numberOfRotatedFiles

Type: unsigned integer

Description: Number of old log files to keep

Parameter: file

Type: string

Description: Path to the log file, empty means logs go to the journal

5.2.30 BeeGFSManagementConfig: Entity

parent: Entity

Parameter: ref_beegfs_cluster_uuid

Type: UUID

Description: BeeGFS cluster

Parameter: dataDir

Type: string

Description: Path to the data directory

Parameter: allowNewServers

Type: boolean

Description: Allow new servers registration

Parameter: `allowNewTargets`

Type: boolean

Description: Allow new storage targets registration

Parameter: `targetOfflineTimeout`

Type: unsigned integer

Description: Timeout until targets on a storage server are considered offline when no target status is received

Parameter: `clientAutoRemove`

Type: unsigned integer

Description: Time after which an unreachable node is considered dead

Parameter: `numberOfWorkers`

Type: unsigned integer

Description: Number of worker threads

Parameter: `metaDynamicPools`

Type: boolean

Description: Raise lower limits if difference in capacity becomes too large between targets

Parameter: `metaInodesLowLimit`

Type: string

Description: Metadata inode free space pool threshold

Parameter: `metaInodesEmergencyLimit`

Type: string

Description: Metadata inode free space pool threshold

Parameter: `metaSpaceLowLimit`

Type: unsigned integer

Description: Meta space low limit

Parameter: `metaSpaceEmergencyLimit`

Type: unsigned integer

Description: Meta space emergency limit

Parameter: `storageDynamicPools`

Type: boolean

Description: Raise lower limits if difference in capacity becomes too large between targets

Parameter: `storageInodesLowLimit`

Type: unsigned integer

Description: Storage inode free space pool threshold

Parameter: `storageInodesEmergencyLimit`

Type: unsigned integer

Description: Storage inode free space pool threshold

Parameter: `storageSpaceLowLimit`

Type: unsigned integer

Description: Storage space free space pool threshold

Parameter: `storageSpaceEmergencyLimit`

Type: unsigned integer

Description: Storage space free space pool threshold

Parameter: `enableQuota`

Type: boolean

Description: Enable quota

Parameter: `quotaQueryGIDFile`

Type: string

Description: Path to a file with GIDs to be checked by quota

Parameter: `quotaGIDs`

Type: list of strings

Description: GIDs to be checked by quota

Parameter: `quotaQueryGIDRange`

Type: string

Description: GID range to be checked by quota

Parameter: `quotaQueryUIDFile`

Type: string

Description: Path to a file with UIDs to be checked by quota

Parameter: `quotaUIDs`

Type: list of strings

Description: UIDs to be checked by quota

Parameter: `quotaQueryUIDRange`

Type: string

Description: UID range to be checked by quota

Parameter: `quotaQueryType`

Type: string

Description: Query type for quota

Parameter: `quotaQueryWithSystemUsersGroups`

Type: boolean

Description: Allow also system users/groups to be checked by quota

Parameter: quotaUpdateInterval

Type: unsigned integer

Description: Quota update interval

Parameter: connectionSettings

Type: BeeGFSManagementConnectionSettings

Description: Submode containing BeeGFS management connection settings

Parameter: logSettings

Type: BeeGFSLogSettings

Description: Submode containing BeeGFS logging settings

5.2.31 BeeGFSManagementConnectionSettings: Entity

parent: Entity

Parameter: portTCP

Type: unsigned integer

Description: TCP port for the service

Parameter: portUDP

Type: unsigned integer

Description: UDP port for the service

Parameter: backlogTCP

Type: unsigned integer

Description: TCP listen backlog

Parameter: interfacesFile

Type: string

Description: Path to the file with a list of interfaces for communication

Parameter: interfacesList

Type: list of strings

Description: List of interfaces for communication

Parameter: netFilterFile

Type: string

Description: Path to a file with a list of allowed IP subnets

Parameter: useRDMA

Type: boolean

Description: Use RDMA

5.2.32 BeeGFSManagementRole: Role

parent: Role

Parameter: configurations

Type: list of BeeGFSManagementConfig

Description: List of BeeGFS management configurations

5.2.33 BeeGFSMetadataConfig: Entity

parent: Entity

Parameter: ref_beeufs_cluster_uuid

Type: UUID

Description: BeeGFS cluster

Parameter: dataDir

Type: string

Description: Path to the data directory

Parameter: bindToNumaZone

Type: string

Description: Zero-based NUMA zone number to which all threads of metadata process should be bound

Parameter: runDaemonized

Type: boolean

Description: Run the storage service as a daemon

Parameter: clientXAttrs

Type: boolean

Description: Enable client-side extended attributes

Parameter: clientACLs

Type: boolean

Description: Enable handling and storage of client-side ACLs

Parameter: useExtendedAttributes

Type: boolean

Description: Store metadata as extended attributes or not

Parameter: allowUserSetPattern

Type: boolean

Description: Allow non-privileged users to modify stripe pattern settings for directories they own

Parameter: useAggressiveStreamPoll

Type: boolean

Description: Actively poll for events instead of sleeping until an event occur

Parameter: usePerUserMsgQueues

Type: boolean

Description: Use per-user queues for pending requests

Parameter: targetChooser

Type: enum

Description: The algorithm to choose storage targets for file creation

Parameter: targetOfflineTimeout

Type: unsigned integer

Description: Timeout until targets on a storage server are considered offline when no target status is received

Parameter: targetAttachmentFile

Type: string

Description: File with a list of targets to be grouped within the same domain for randominternode

Parameter: numberOfStreamListeners

Type: unsigned integer

Description: The number of threads waiting for incoming data events

Parameter: numberOfWorkers

Type: unsigned integer

Description: Number of worker threads

Parameter: startByCMDaemon

Type: boolean

Description: Start service by CMDaemon or manually

Parameter: connectionSettings

Type: BeeGFSMetadataConnectionSettings

Description: Submode containing BeeGFS metadata connection settings

Parameter: logSettings

Type: BeeGFSLogSettings

Description: Submode containing BeeGFS logging settings

5.2.34 BeeGFSMetadataConnectionSettings: Entity

parent: Entity

Parameter: portTCP

Type: unsigned integer

Description: TCP port for the service

Parameter: portUDP

Type: unsigned integer

Description: UDP port for the service

Parameter: backlogTCP

Type: unsigned integer

Description: TCP listen backlog

Parameter: maxInternodeNumber

Type: unsigned integer

Description: Max number of simultaneous connections to the same node

Parameter: fallbackExpiration

Type: unsigned integer

Description: Time after which a connection to a fallback interface expires

Parameter: interfacesFile

Type: string

Description: Path to the file with a list of interfaces for communication

Parameter: interfacesList

Type: list of strings

Description: List of interfaces for communication

Parameter: netFilterFile

Type: string

Description: Path to a file with a list of allowed IP subnets

Parameter: tcpOnlyFilterFile

Type: string

Description: Path to a file with a list of no-RDMA IP ranges

Parameter: useRDMA

Type: boolean

Description: Use RDMA

Parameter: rdmaTypeOfService

Type: unsigned integer

Description: RDMA type of service

5.2.35 BeeGFSMetadataRole: Role

parent: Role

Parameter: configurations

Type: list of BeeGFSMetadataConfig

Description: List of BeeGFS metadata configurations

5.2.36 BeeGFSStorageConfig: Entity

parent: Entity

Parameter: ref_beegfs_cluster_uuid

Type: UUID

Description: BeeGFS cluster

Parameter: dataDirs

Type: list of strings

Description: Path to the data directories

Parameter: targetOfflineTimeout

Type: unsigned integer

Description: Timeout until targets on a storage server are considered offline when no target status is received

Parameter: useAggressiveStreamPoll

Type: boolean

Description: Actively poll for events instead of sleeping until an event occur

Parameter: usePerTargetWorkers

Type: boolean

Description: Create a separate set of workers and attach it for each storage target

Parameter: usePerUserMsgQueues

Type: boolean

Description: Use per-user queues for pending requests

Parameter: runDaemonized

Type: boolean

Description: Run the storage service as a daemon

Parameter: bindToNumaZone

Type: string

Description: Zero-based NUMA zone number to which all threads of metadata process should be bound

Parameter: resyncSafetyThreshold

Type: unsigned integer

Description: Add an extra amount of time to the last successful communication timestamp, in case of a potential cache loss

Parameter: fileReadAheadSize

Type: unsigned integer

Description: Byte range submitted to the kernel for read-ahead after number of bytes was already read from target

Parameter: fileReadAheadTriggerSize

Type: unsigned integer

Description: Number of bytes after reading which the read-ahead is triggered

Parameter: fileReadSize

Type: unsigned integer

Description: Maximum amount of data server should read in a single operation

Parameter: `fileWriteSize`

Type: unsigned integer

Description: Maximum amount of data server should write in a single operation

Parameter: `fileWriteSyncSize`

Type: unsigned integer

Description: Number of bytes after which kernel will be advised to commit data

Parameter: `workerBufferSize`

Type: unsigned integer

Description: Size of network and io buffers, allocated for each worker

Parameter: `numberOfResyncGatherSlaves`

Type: unsigned integer

Description: Number of threads to gather filesystem information for a buddy mirror resync

Parameter: `numberOfResyncSlaves`

Type: unsigned integer

Description: Number of threads to sync filesystem information for a buddy mirror resync

Parameter: `numberOfStreamListeners`

Type: unsigned integer

Description: Number of threads waiting for incoming data events

Parameter: `numberOfWorkers`

Type: unsigned integer

Description: Number of worker threads

Parameter: `startByCMDaemon`

Type: boolean

Description: Start service by CMDaemon or manually

Parameter: `connectionSettings`

Type: `BeeGFSStorageConnectionSettings`

Description: Submode containing BeeGFS storage connection settings

Parameter: `logSettings`

Type: `BeeGFSLogSettings`

Description: Submode containing BeeGFS logging settings

5.2.37 `BeeGFSStorageConnectionSettings`: Entity

parent: Entity

Parameter: `portTCP`

Type: unsigned integer

Description: TCP port for the service

Parameter: portUDP

Type: unsigned integer

Description: UDP port for the service

Parameter: backlogTCP

Type: unsigned integer

Description: TCP listen backlog

Parameter: maxInternodeNumber

Type: unsigned integer

Description: Max number of simultaneous connections to the same node

Parameter: interfacesFile

Type: string

Description: Path to the file with a list of interfaces for communication

Parameter: interfacesList

Type: list of strings

Description: List of interfaces for communication

Parameter: netFilterFile

Type: string

Description: Path to a file with a list of allowed IP subnets

Parameter: tcpOnlyFilterFile

Type: string

Description: Path to a file with a list of no-RDMA IP ranges

Parameter: useRDMA

Type: boolean

Description: Use RDMA

Parameter: rdmaTypeOfService

Type: unsigned integer

Description: RDMA type of service

5.2.38 BeeGFSStorageRole: Role

parent: Role

Parameter: configurations

Type: list of BeeGFSStorageConfig

Description: List of BeeGFS storage configurations

5.2.39 BlockingOperation: Entity

parent: Entity

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: message

Type: string

Description: Message

5.2.40 BlockingProvisioningOperation: BlockingOperation

parent: BlockingOperation

Parameter: request_uuids

Type: list of unsigned numbers

Description: Request UUIDs

5.2.41 BlockingWarningOperation: BlockingOperation

parent: BlockingOperation

5.2.42 BMCSettings: Entity

parent: Entity

Parameter: userName

Type: string

Description: Username used to send BMC commands

Parameter: userID

Type: integer

Description: User ID to send BMC commands

Parameter: password

Type: string

Description: Password used to send BMC commands

Parameter: powerResetDelay

Type: unsigned integer

Description: Delay used for BMC power reset, if set to > 0 power off; sleep X; power on is used

Parameter: extraArguments

Type: string

Description: Extra arguments passed to BMC commands

Parameter: privilege

Type: enum

Description: Privilege given to the user

Parameter: firmwareManageMode

Type: enum

Description: Firmware manage mode

5.2.43 BootRole: Role

parent: Role

Parameter: nodegroups

Type: list of references to NodeGroup

Description: List of node groups which can boot from this node

Parameter: categories

Type: list of references to Category

Description: List of categories which can boot from this node

Parameter: racks

Type: list of references to Rack

Description: List of racks which can boot from this node

Parameter: softwareImages

Type: list of references to SoftwareImage

Description: List of software images from which can be booted, leave empty for all images

Parameter: allowRamdiskCreation

Type: boolean

Description: Allow the node to create ramdisks by itself, instead of waiting for them to be rsynced from the headnode

Parameter: disableAutomaticExports

Type: boolean

Description: Disable creation of automatic filesystem exports

Parameter: unmanagedNodes

Type: boolean

Description: Allow unmanaged nodes to boot

Parameter: imagesFromProvisioningRole

Type: boolean

Description: Only allow nodes to boot from images defined in the provisioning role

Parameter: syncFSParts

Type: enum

Description: Sync FSParts mode

Parameter: fsparts

Type: list of references to FSPart

Description: FSParts

5.2.44 BurnConfig: Entity

parent: Entity

Parameter: name

Type: string

Description: A short name to identify this burn configuration.

Parameter: description

Type: string

Description: A more extensive description of this burn configuration.

Parameter: configuration

Type: string

Description: This XML data describes which burn tests should be used.

5.2.45 BurnStatus: Entity

parent: Entity

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: startNewBurn

Type: boolean

Description: Starting new burn on next reboot

Parameter: burning

Type: boolean

Description: Currently burning

Parameter: information

Type: string

Description: Information

Parameter: configuration

Type: string

Description: Configuration

Parameter: error

Type: string

Description: Error message.

Parameter: warnings

Type: unsigned integer

Description: Number of warnings which have occurred so far.

Parameter: phaseName

Type: string

Description: Name of the current phase.

Parameter: phaseTime

Type: string

Description: Time past since the current phase was started.

Parameter: burnComplete

Type: string

Description: Set if the burn cycle has completed.

Parameter: burnFailed

Type: boolean

Description: Set if the burn cycle has failed.

Parameter: testStatusList

Type: list of BurnTestStatus

Description: none

Parameter: tag

Type: string

Description: Hardware tag.

5.2.46 BurnTestStatus: Entity

parent: Entity

Parameter: name

Type: string

Description: Test name

Parameter: status

Type: string

Description: Test status

Parameter: started

Type: boolean

Description: Indicates if test was started

Parameter: passed

Type: boolean

Description: Indicates if test has passed

Parameter: failed

Type: boolean

Description: Indicates if test has failed

Parameter: warning

Type: boolean

Description: Indicates if test produced a warning

5.2.47 CapiRole: Role

parent: Role

Parameter: labels

Type: list of strings

Description: labels to attach to the ByoHost CR in the form labelname=labelVal for e.g. '-label site=apac -label cores=2'

Parameter: metricsBindAddress

Type: string

Description: metricsbindaddress is the TCP address that the controller should bind to for serving prometheus metrics. It can be set to '0' to disable the metrics serving (default ':8888')

Parameter: level

Type: unsigned integer

Description: Number for the log level verbosity

Parameter: options

Type: list of strings

Description: Additional parameters for byoh host agent

Parameter: kubeCluster

Type: reference to KubeCluster

Description: The Kubernetes cluster instance (pointer)

5.2.48 Category: Entity

parent: Entity

Parameter: name

Type: string

Description: Name of category

Parameter: fsmounts

Type: list of FSMount

Description: Configure the entries placed in /etc/fstab

Parameter: staticRoutes

Type: list of StaticRoute

Description: Configure static routes for the interfaces

Parameter: roles

Type: list of Role

Description: Assign the roles the node should play

Parameter: notes

Type: string

Description: Administrator notes

Parameter: `gpuSettings`

Type: list of GPUSettings

Description: Configure the GPUs

Parameter: `softwareImageProxy`

Type: SoftwareImageProxy

Description: Software image the category will use

Parameter: `defaultGateway`

Type: IP

Description: Default gateway for the category

Parameter: `nameServers`

Type: list of signed numbers

Description: List of name servers the category will use

Parameter: `timeServers`

Type: list of strings

Description: List of time servers the category will use

Parameter: `searchDomains`

Type: list of strings

Description: Search domains for the category

Parameter: `disksetup`

Type: string

Description: Node specific disk setup

Parameter: `biosSetup`

Type: free JSON object

Description: BIOS setup

Parameter: `installMode`

Type: string

Description: Installmode to be used by default, if none is specified in the node

Parameter: `newNodeInstallMode`

Type: string

Description: Installmode to be used by default, for new nodes

Parameter: `excludeListFull`

Type: string

Description: Exclude list for full install

Parameter: `excludeListSync`

Type: string

Description: Exclude list for sync install

Parameter: excludeListUpdate

Type: string

Description: Exclude list for update

Parameter: excludeListGrab

Type: string

Description: Exclude list for grabbing to an existing image

Parameter: excludeListGrabnew

Type: string

Description: Exclude list for grabbing to a new image

Parameter: initialize

Type: string

Description: Initialize script to be used for category

Parameter: finalize

Type: string

Description: Finalize script to be used for category

Parameter: raidconf

Type: string

Description: Node specific Hardware RAID configuration

Parameter: fsexports

Type: list of FSExport

Description: Configure the entries placed in /etc/exports

Parameter: services

Type: list of OSServiceConfig

Description: Manage operating system services

Parameter: bmcSettings

Type: BMCSettings or None

Description: Configure the baseboard management controller settings

Parameter: seLinuxSettings

Type: SELinuxSettings or None

Description: Configure the SELinux settings

Parameter: dpuSettings

Type: DPUSettings or None

Description: Configure the DPU settings

Parameter: proxySettings

Type: ProxySettings or None

Description: Configure the proxy server settings

Parameter: nodeInstallerDisk

Type: boolean

Description: The node has its own node installer disk

Parameter: installBootRecord

Type: boolean

Description: Install boot record on local disk

Parameter: managementNetwork

Type: reference to Network or None

Description: Determines what network should be used for management traffic. If not set, partition setting is used.

Parameter: interactiveUser

Type: enum

Description: Allow user login on node

Parameter: dataNode

Type: boolean

Description: If enabled the node will never do a FULL install without explicit user confirmation

Parameter: allowNetworkingRestart

Type: boolean

Description: Allow nodes to update ifcfg files and restart networking

Parameter: excludeListManipulateScript

Type: string

Description: A user defined script that can be used to do custom last minute changes to the exclude lists used by cmdaemon to rsync

Parameter: ioScheduler

Type: string

Description: The I/O scheduler for the disks

Parameter: useExclusivelyFor

Type: string

Description: Use node exclusively for desired function: stop all other services

Parameter: kernelVersion

Type: string

Description: Kernel version used

Parameter: kernelParameters

Type: string

Description: Kernel parameters passed to the kernel at boot time

Parameter: kernelOutputConsole

Type: string

Description: Kernel output console used at boot time

Parameter: modules

Type: list of KernelModule

Description: Manage kernel modules loaded in this image

Parameter: versionConfigFiles

Type: boolean

Description: Keep old versions of all config files for all nodes in this category

Parameter: bootLoader

Type: enum

Description: Boot loader

Parameter: bootLoaderProtocol

Type: enum

Description: Boot loader protocol for retrieving initrd and vmlinuz

Parameter: bootLoaderFile

Type: string

Description: Alternative boot loader file

Parameter: fips

Type: enum

Description: Federal Information Processing Standard Security Requirements

Parameter: timeZoneSettings

Type: TimeZoneSettings or None

Description: Time zone

5.2.49 Ceph: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: fsid

Type: string

Description: Ceph ID

Parameter: configFilePath

Type: string

Description: Path to the Ceph config file

Parameter: `adminKeyringFilePath`

Type: `string`

Description: Path to the Ceph admin keyring file

Parameter: `monitorKeyringFilePath`

Type: `string`

Description: Path to the Ceph monitor keyring file

Parameter: `adminKey`

Type: `string`

Description: Ceph client admin key

Parameter: `monitorKey`

Type: `string`

Description: Ceph monitor key

Parameter: `publicNetworks`

Type: list of references to `Network`

Description: Public networks

Parameter: `clusterNetworks`

Type: list of references to `Network`

Description: Cluster networks

Parameter: `creationTime`

Type: `timestamp`

Description: Date on which the Ceph was defined

Parameter: `setupState`

Type: `enum`

Description: Flag to keep track of the installation state

Parameter: `version`

Type: `string`

Description: Ceph version of the cluster

Parameter: `monmap`

Type: `string`

Description: *none*

Parameter: `bootstrapped`

Type: `boolean`

Description: Bootstrapped

Parameter: `monitorPortV1`

Type: unsigned integer

Description: Monitor daemon port

Parameter: `monitorPortV2`

Type: unsigned integer

Description: Monitor daemon port (msgr2)

Parameter: `monAllowPoolDelete`

Type: boolean

Description: mon allow pool delete

Parameter: `monOsdFullRatio`

Type: float

Description: mon osd full ratio

Parameter: `monOsdNearfullRatio`

Type: float

Description: mon osd nearfull ratio

Parameter: `monMaxOsd`

Type: unsigned integer

Description: mon max osd

Parameter: `osdPoolDefaultSize`

Type: unsigned integer

Description: osd pool default size

Parameter: `osdPoolDefaultMinSize`

Type: unsigned integer

Description: osd pool default min size

Parameter: `autoAdjustCrushMap`

Type: boolean

Description: Automatically Adjust CRUSH Map

Parameter: `rbdCache`

Type: boolean

Description: Enable caching for RADOS Block Device (RBD).

Parameter: `rbdCacheSize`

Type: unsigned integer

Description: The RBD cache size in bytes.

Parameter: `rbdCacheMaxDirty`

Type: unsigned integer

Description: The dirty limit in bytes at which the cache triggers write-back. If 0, uses write-through caching. Constraint: Must be less than rbd cache size.

Parameter: `rbdCacheTargetDirty`

Type: unsigned integer

Description: The dirty target before the cache begins writing data to the data storage. Does not block writes to the cache. Constraint: Must be less than rbd cache max dirty.

Parameter: `rbdCacheMaxDirtyAge`

Type: float

Description: The number of seconds dirty data is in the cache before writeback starts.

Parameter: `rbdCacheWritethroughUntilFlush`

Type: boolean

Description: Start out in write-through mode, and switch to write-back after the first flush request is received.

Parameter: `rbdReadaheadTriggerRequests`

Type: integer

Description: Number of sequential read requests necessary to trigger read-ahead.

Parameter: `rbdReadaheadMaxBytes`

Type: unsigned integer

Description: Maximum size of a read-ahead request. If zero, read-ahead is disabled.

Parameter: `rbdReadaheadDisableAfterBytes`

Type: unsigned integer

Description: After this many bytes have been read from an RBD image, read-ahead is disabled for that image until it is closed. If zero, read-ahead stays enabled.

5.2.50 CephMDSRole: Role

parent: Role

Parameter: `mdsBeaconInterval`

Type: float

Description: The frequency (in seconds) of beacon messages sent to the monitor.

Parameter: `mdsBeaconGrace`

Type: float

Description: The interval without beacons before Ceph declares an MDS laggy (and possibly replace it).

Parameter: `mdsTickInterval`

Type: float

Description: How frequently the MDS performs internal periodic tasks.

5.2.51 CephMGRRole: Role

parent: Role

Parameter: modulePath

Type: string

Description: Path to load modules from

Parameter: dataPath

Type: string

Description: Path to load daemon data (such as keyring)

Parameter: beaconPeriod

Type: integer

Description: How many seconds between mgr beacons to monitors

5.2.52 CephMonitorRole: Role

parent: Role

Parameter: dataPath

Type: string

Description: Path to the Monitor data

5.2.53 CephOSDBlueStoreConfig: CephOSDConfig

parent: CephOSDConfig

Parameter: osdDevice

Type: string

Description: Device to store OSD data

Parameter: osdWalDevice

Type: string

Description: Optional device to store write-ahead-log

Parameter: osdDbDevice

Type: string

Description: Optional device to store internal metadata

5.2.54 CephOSDConfig: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

5.2.55 CephOSDPool: Entity

parent: Entity

Parameter: id

Type: unsigned integer

Description: Id

Parameter: name

Type: string

Description: Name

Parameter: size

Type: unsigned integer

Description: Number of replicas

Parameter: pgp_num

Type: unsigned integer

Description: The effective number of placement groups for placement to use when calculating data placement

Parameter: pg_num

Type: unsigned integer

Description: The effective number of placement groups to use when calculating data placement

Parameter: pg_autoscale_mode

Type: enum

Description: Placement groups auto management mode

Parameter: crush_ruleset

Type: unsigned integer

Description: CRUSH Map Ruleset

Parameter: application

Type: string

Description: Associated application (typically one of rgw,rbd,cephfs)

Parameter: min_size

Type: unsigned integer

Description: none

5.2.56 CephOSDRole: Role

parent: Role

Parameter: osdconfigs

Type: list of CephOSDConfig

Description: OSD configurations

5.2.57 CephState: Entity

parent: Entity

Parameter: ref_ceph_uuid

Type: UUID

Description: Ceph

Parameter: `version`

Type: unsigned integer

Description: *none*

Parameter: `ref_ceph_node_uuids`

Type: list of unsigned numbers

Description: *none*

Parameter: `cephNodeValues`

Type: list of signed numbers

Description: *none*

Parameter: `OSDMapIds`

Type: list of unsigned numbers

Description: *none*

Parameter: `OSDMapNodes`

Type: list of unsigned numbers

Description: *none*

Parameter: `OSDMapConfigs`

Type: list of unsigned numbers

Description: *none*

Parameter: `OSDMapConfigNames`

Type: list of strings

Description: *none*

Parameter: `OSDMapStatuses`

Type: list of unsigned numbers

Description: to mark status (e.g. `NEED_DELETE`) using numeric constants

Parameter: `OSDMapDevices`

Type: list of strings

Description: in case we need to keep track of changing device names

5.2.58 Certificate: Entity

parent: Entity

Parameter: `PEM`

Type: string

Description: *none*

Parameter: `revoked`

Type: boolean

Description: Certificate has been revoked and can not be used

Parameter: `serialNumber`

Type: integer

Description: Serial number

Parameter: `remaining`

Type: integer

Description: Remaining time until certificate expires

Parameter: `startTime`

Type: timestamp

Description: Date when certificate is valid

Parameter: `expireTime`

Type: timestamp

Description: Date when certificate expires

Parameter: `CA`

Type: boolean

Description: A CA certificate can be used sign other certificates

Parameter: `hasEdgeSecret`

Type: boolean

Description: Has an edge secret

Parameter: `profile`

Type: string

Description: Profile

Parameter: `sysLogin`

Type: string

Description: System log in

Parameter: `component`

Type: string

Description: Component

Parameter: `subjectName`

Type: string

Description: Subject

Parameter: `issuerName`

Type: string

Description: Issuer

Parameter: `subjectAlternativeNames`

Type: list of strings

Description: Alternative names

Parameter: country

Type: string

Description: Country

Parameter: state

Type: string

Description: State

Parameter: locality

Type: string

Description: Locality

Parameter: organization

Type: string

Description: Organization

Parameter: organizationalUnit

Type: string

Description: Organizational unit

Parameter: commonName

Type: string

Description: Name

5.2.59 CertificateInfo: Entity

parent: Entity

Parameter: certificate

Type: Certificate

Description: Certificate

Parameter: private_key

Type: string

Description: Optional private key field.

5.2.60 CertificateRequest: Entity

parent: Entity

Parameter: CSR

Type: string

Description: none

Parameter: session_uuid

Type: UUID

Description: Session

Parameter: `clientType`

Type: unsigned integer

Description: Client type

Parameter: `country`

Type: string

Description: Country

Parameter: `state`

Type: string

Description: State

Parameter: `locality`

Type: string

Description: Locality

Parameter: `organization`

Type: string

Description: Organization

Parameter: `organizationalUnit`

Type: string

Description: Organizational unit

Parameter: `commonName`

Type: string

Description: Common name

Parameter: `subjectAlternativeNames`

Type: list of strings

Description: Subject alternative names

Parameter: `allowAutosign`

Type: boolean

Description: Allow autosign

Parameter: `hasEdgeSecret`

Type: boolean

Description: Has an edge secret

5.2.61 CertificateSubjectName: Entity

parent: Entity

Parameter: `country`

Type: string

Description: Country

Parameter: state

Type: string

Description: State

Parameter: locality

Type: string

Description: Locality

Parameter: organization

Type: string

Description: Organization

Parameter: organizationalUnit

Type: string

Description: Organizational unit

Parameter: commonName

Type: string

Description: CommonName

Parameter: profile

Type: string

Description: Profile

Parameter: syslogin

Type: string

Description: Syslogin

Parameter: component

Type: string

Description: Component

Parameter: days

Type: integer

Description: Days

Parameter: ca

Type: boolean

Description: CA

Parameter: subjectAlternativeNames

Type: list of strings

Description: Alternative names

5.2.62 ChargeBackRequest: Entity**parent:** Entity**Parameter:** name**Type:** string**Description:** Name**Parameter:** groupByUser**Type:** boolean**Description:** Group by user**Parameter:** groupByGroup**Type:** boolean**Description:** Group by group**Parameter:** groupByAccount**Type:** boolean**Description:** Group by account**Parameter:** groupByJobName**Type:** boolean**Description:** Group by job name**Parameter:** groupByJobId**Type:** boolean**Description:** Group by job ID**Parameter:** groupByAccountingInfo**Type:** list of strings**Description:** Group by accounting info**Parameter:** users**Type:** list of strings**Description:** Users**Parameter:** groups**Type:** list of strings**Description:** Users**Parameter:** accounts**Type:** list of strings**Description:** Accounts**Parameter:** jobNames**Type:** list of strings**Description:** Job names

Parameter: `jobIds`

Type: list of strings

Description: Job IDs

Parameter: `accountingInfo`

Type: free JSON object

Description: Accounting info

Parameter: `wlmClusters`

Type: list of references to `WlmCluster`

Description: List of wlm clusters which to include, empty for all

Parameter: `pricePerCPUSecond`

Type: float

Description: Price per CPU second

Parameter: `pricePerCPUCoreSecond`

Type: float

Description: Price per CPU core second

Parameter: `pricePerGPUSecond`

Type: float

Description: Price per GPU second

Parameter: `pricePerMemoryByteSecond`

Type: float

Description: Price per memory byte-second

Parameter: `pricePerSlotSecond`

Type: float

Description: Price per slot second

Parameter: `currency`

Type: string

Description: Currency

Parameter: `startTime`

Type: string

Description: Start time

Parameter: `endTime`

Type: string

Description: End time

Parameter: `utc`

Type: boolean

Description: Time in UTC

Parameter: includeRunning

Type: boolean

Description: Include running

Parameter: calculatePrediction

Type: boolean

Description: Calculate prediction

Parameter: preference

Type: unsigned integer

Description: The request with the highest preference be shown by default

Parameter: notes

Type: string

Description: Administrator notes

5.2.63 Chassis: Device

parent: Device

Parameter: ip

Type: IP

Description: Ip address

Parameter: network

Type: reference to Network or None

Description: Network to which this switch is connected

Parameter: model

Type: string

Description: Device model name

Parameter: username

Type: string

Description: Chassis username

Parameter: password

Type: string

Description: Chassis password

Parameter: members

Type: list of references to Device

Description: List of devices belonging to this chassis

Parameter: slots

Type: list of strings

Description: Slot description per device in chassis

Parameter: layout

Type: string

Description: Layout definition for rackview (Format: [|-]x,y e.g: |8,3 or -2,6)

5.2.64 CloudDirectorRole: DirectorRole

parent: DirectorRole

Parameter: bootImageFromProvisioningRole

Type: boolean

Description: Only allow nodes to boot from images defined in the provisioning role

5.2.65 CloudGatewayRole: Role

parent: Role

5.2.66 CloudJobDescription: Entity

parent: Entity

Parameter: name

Type: string

Description: Job name

Parameter: script

Type: string

Description: Script path

Parameter: workloadManagerJobId

Type: string

Description: Job identifier according to the workload manager

Parameter: user

Type: string

Description: Owner of a job

Parameter: sizeOfInputData

Type: unsigned integer

Description: Size of job's input data

Parameter: sizeOfOutputData

Type: unsigned integer

Description: Size of job's output data

Parameter: expectedSizeOfOutputData

Type: unsigned integer

Description: Expected size of job's output data

Parameter: inputFiles

Type: list of strings

Description: Input files list

Parameter: `expandedInputFiles`

Type: list of strings

Description: Internal list of input files after labeled wildcards are resolved

Parameter: `outputFiles`

Type: list of strings

Description: Output files list

Parameter: `doNotDownloadFiles`

Type: list of strings

Description: List of output files to leave in the cloud without downloading

Parameter: `remoteOutputLists`

Type: list of strings

Description: List of remote files which contain job output file names

Parameter: `workloadManager`

Type: string

Description: Workload manager type

Parameter: `workingDirectory`

Type: string

Description: Job's working directory

Parameter: `region`

Type: string

Description: Cloud region

Parameter: `jobQueue`

Type: string

Description: WLM queue where the job runs

Parameter: `storageStrategy`

Type: enum

Description: *none*

Parameter: `storageVolumeId`

Type: string

Description: Storage Volume ID

Parameter: `storageVolumeSize`

Type: unsigned integer

Description: Size of Storage Volume

Parameter: `storageVolumeDevicePath`

Type: `string`

Description: OS device path

Parameter: `fsxInstanceId`

Type: `string`

Description: *none*

Parameter: `fsxInstanceUrl`

Type: `string`

Description: *none*

Parameter: `fsxInstancePathOnDirector`

Type: `string`

Description: *none*

Parameter: `anfVolumeId`

Type: `string`

Description: *none*

Parameter: `anfVolumeUrl`

Type: `string`

Description: *none*

Parameter: `anfVolumePathOnDirector`

Type: `string`

Description: *none*

Parameter: `jobType`

Type: `enum`

Description: Defines the set of operations that will run on job.

Parameter: `storageNode`

Type: reference to `CloudNode` or `None`

Description: Storage Node

Parameter: `excludedStorageNodes`

Type: list of references to `CloudNode`

Description: Job will not run on those nodes

Parameter: `stdoutFileNames`

Type: list of strings

Description: Standard output stream filenames list

Parameter: `stderrFileNames`

Type: list of strings

Description: Standard error stream filenames list

Parameter: `uploadTime`

Type: `float`

Description: Time spent on input data transfer and job pre-run preparations

Parameter: `downloadTime`

Type: `float`

Description: Time spent on jobs job results transfer and post-run activities

Parameter: `maxUploadTime`

Type: `float`

Description: *none*

Parameter: `maxDownloadTime`

Type: `float`

Description: *none*

Parameter: `jobState`

Type: `enum`

Description: Current state of the job

Parameter: `jobStatusMsg`

Type: `string`

Description: Job status

Parameter: `jobStatusTimestamp`

Type: `timestamp`

Description: Time when the job status was last changed

Parameter: `computeNodes`

Type: list of references to `Node`

Description: List of compute nodes the job was running on

Parameter: `numThreads`

Type: `unsigned integer`

Description: *none*

Parameter: `submissionTimestamp`

Type: `timestamp`

Description: Time when the job was submitted

Parameter: `endTimestamp`

Type: `timestamp`

Description: Time when the job finished execution

Parameter: `extraOptions`

Type: list of strings

Description: *none*

5.2.67 CloudJobSubmissionStatus: Entity

parent: Entity

Parameter: availableExpectedTransferTimes

Type: boolean

Description: *none*

Parameter: expectedInputDataTransferTimeInSeconds

Type: unsigned integer

Description: *none*

Parameter: jobName

Type: string

Description: *none*

Parameter: errMsg

Type: string

Description: *none*

Parameter: extraOptions

Type: list of strings

Description: *none*

5.2.68 CloudNode: ComputeNode

parent: ComputeNode

Parameter: cloudSettings

Type: CloudSettings

Description: Submode containing all cloud node settings

5.2.69 CloudProvider: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: tags

Type: list of strings

Description: List of tags that will be assigned to all resources created by BCM under this cloud provider

5.2.70 CloudRegion: Entity

parent: Entity

Parameter: name

Type: string

Description: The name of the cloud region.

Parameter: provider

Type: reference to CloudProvider

Description: Cloud provider

Parameter: timeZoneSettings

Type: TimeZoneSettings or None

Description: Time zone

5.2.71 CloudSettings: Entity

parent: Entity

Parameter: provider

Type: reference to CloudProvider

Description: Cloud provider

Parameter: isStorageTemplate

Type: boolean

Description: none

Parameter: isStorageNode

Type: boolean

Description: none

Parameter: tags

Type: list of strings

Description: List of tags that will be assigned to cloud instance (for supported providers)

5.2.72 CloudStorageActionData: Entity

parent: Entity

Parameter: jobDescription

Type: reference to CloudJobDescription

Description: none

Parameter: typeString

Type: string

Description: none

Parameter: index

Type: unsigned integer

Description: none

Parameter: totalActions

Type: unsigned integer

Description: none

Parameter: status

Type: enum

Description: none

Parameter: errorMessage

Type: string

Description: none

Parameter: isReverse

Type: boolean

Description: none

Parameter: timeoutSecs

Type: unsigned integer

Description: none

Parameter: startTime

Type: timestamp

Description: none

Parameter: retries

Type: unsigned integer

Description: none

Parameter: workloadManager

Type: string

Description: none

Parameter: workloadManagerJobId

Type: string

Description: none

Parameter: jobName

Type: string

Description: none

Parameter: executionNode

Type: reference to Node

Description: none

Parameter: extraOptions

Type: list of strings

Description: none

5.2.73 CloudType: Entity

parent: Entity

Parameter: name

Type: string

Description: The name of the VM type.

Parameter: provider

Type: reference to CloudProvider

Description: Cloud provider

Parameter: cpu

Type: string

Description: The amount of CPU cores.

Parameter: gpu

Type: string

Description: The amount of GPUs.

Parameter: memory

Type: string

Description: The amount of operating system memory.

Parameter: disks

Type: string

Description: AWS: The amount of disks coming with the type. Azure: the maximum amount of data disk which can be attached to the VMs of this type. OCI: The number of local disks available for this shape.

Parameter: description

Type: string

Description: The description.

5.2.74 ClusterSetup: Entity

parent: Entity

Parameter: ref_partition_uuid

Type: UUID

Description: Partition

Parameter: CMID

Type: unsigned integer

Description: CMID

Parameter: databaseVersion

Type: unsigned integer

Description: Database version

Parameter: organization

Type: string

Description: Organization

Parameter: powerOnDelay

Type: float

Description: Delay in seconds between powering on nodes

Parameter: powerOffDelay

Type: float

Description: Delay in seconds between powering off nodes

5.2.75 CMDaemonBackgroundTask: Entity

parent: Entity

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: ref_entity_uuid

Type: UUID

Description: Entity

Parameter: name

Type: string

Description: Name

Parameter: updates

Type: list of strings

Description: Updates

Parameter: exitCode

Type: integer

Description: Exit code

Parameter: status

Type: enum

Description: Status

Parameter: startTime

Type: unsigned integer

Description: Start time

Parameter: endTime

Type: unsigned integer

Description: End time

5.2.76 CMDaemonFailover: Entity

parent: Entity

Parameter: secondaryHeadNode

Type: reference to HeadNode or None

Description: Secondary/failover head node

Parameter: `keepalive`

Type: unsigned integer

Description: Interval between pings

Parameter: `warntime`

Type: unsigned integer

Description: How quickly to issue a 'late' warning

Parameter: `deadtime`

Type: unsigned integer

Description: How quickly to decide that a node in a cluster is dead

Parameter: `initdead`

Type: unsigned integer

Description: Time between starting failover and declaring a cluster node dead

Parameter: `quorumTime`

Type: unsigned integer

Description: Time before deciding quorum ended in failure

Parameter: `mountScript`

Type: string

Description: Script that mounts the shared storage device when a node becomes the active headnode

Parameter: `unmountScript`

Type: string

Description: Script that unmounts the shared storage device when a node stoppes being the active headnode

Parameter: `failoverNetwork`

Type: reference to Network or None

Description: Network for failover ping

Parameter: `disableAutomaticFailover`

Type: boolean

Description: When automatic failover is disabled the passive headnode will not take over if it detects the active headnode is dead

Parameter: `preFailoverScript`

Type: string

Description: Prefailover script will be run on both headnodes before failover has begun

Parameter: `postFailoverScript`

Type: string

Description: Postfailover script will be run on both headnodes after failover has completed

Parameter: `ipTakeOverMethod`

Type: enum

Description: The manner in which shared IP gets transferred

Parameter: `ipTakeOverScript`

Type: string

Description: IP take over script

5.2.77 `CMDaemonFailoverGroup: Entity`

parent: Entity

Parameter: `name`

Type: string

Description: Name

Parameter: `nodes`

Type: list of references to `ComputeNode`

Description: List of nodes belonging to this group

Parameter: `alsoTakeOverAfterGraciousShutdown`

Type: boolean

Description: Also perform automatic failover if the active group member was gracefully shut down

Parameter: `disableAutomaticFailover`

Type: boolean

Description: When automatic failover is disabled the no node in the group will not take over if the active node is dead

Parameter: `warntime`

Type: unsigned integer

Description: How quickly to issue a 'late' warning

Parameter: `deadtime`

Type: unsigned integer

Description: How quickly to decide that a node in a group is dead

Parameter: `mountScript`

Type: string

Description: Script that mounts the shared storage device when a node becomes the active head node

Parameter: `unmountScript`

Type: string

Description: Script that unmounts the shared storage device when a node stoppes being the active head node

Parameter: `preFailoverScript`

Type: string

Description: Prefailover script will be run on all nodes before failover has begun

Parameter: postFailoverScript

Type: string

Description: Postfailover script will be run on all nodes after failover has completed

Parameter: ipTakeOverMethod

Type: enum

Description: The manner in which shared IP gets transferred

Parameter: ipTakeOverScript

Type: string

Description: IP take over script

5.2.78 CMDaemonFailoverGroupStatus: Entity

parent: Entity

Parameter: failoverStage

Type: integer

Description: Failover stage

Parameter: ref_active_node_uuid

Type: UUID

Description: Active node key

Parameter: activeUpTime

Type: timestamp

Description: Active up time

Parameter: activeDownTime

Type: timestamp

Description: Active down time

Parameter: activeUpCount

Type: unsigned integer

Description: Active up count

Parameter: failoverThreadRunning

Type: boolean

Description: Failover thread running

Parameter: infoMessage

Type: string

Description: Information messages gather during the last failover

Parameter: errorMessage

Type: string

Description: Error messages gather during the last failover

Parameter: activeGraciousShutdown

Type: boolean

Description: True if the previous active head reported a graceful shutdown

5.2.79 CMDaemonFailoverPeer: Entity

parent: Entity

Parameter: ref_head_node_uuid

Type: UUID

Description: Head node

Parameter: status

Type: list of strings

Description: Status

Parameter: failCount

Type: list of unsigned numbers

Description: Number of sequential times failure was detected

5.2.80 CMDaemonFailoverStatus: Entity

parent: Entity

Parameter: ref_head_node_uuid

Type: UUID

Description: Head node to which handled request

Parameter: ref_active_head_node_uuid

Type: UUID

Description: Active head node

Parameter: failoverId

Type: unsigned integer

Description: Head node with the highest failover ID will be active

Parameter: error

Type: boolean

Description: Head node is in error state

Parameter: peers

Type: list of CMDaemonFailoverPeer

Description: Peer status per head node in the failover group

5.2.81 CMDaemonStatus: Entity

parent: Entity

Parameter: version

Type: string

Description: CMDaemon version

Parameter: `state`

Type: `string`

Description: CMDaemon state

Parameter: `myTime`

Type: `timestamp`

Description: System time

Parameter: `startTime`

Type: `timestamp`

Description: CMDaemon start time

Parameter: `uptime`

Type: `unsigned integer`

Description: System uptime

Parameter: `utime`

Type: `float`

Description: User time spend by CMDaemon

Parameter: `stime`

Type: `float`

Description: System time spend by CMDaemon

Parameter: `memused`

Type: `unsigned integer`

Description: Memory used by CMDaemon

Parameter: `sessionCount`

Type: `unsigned integer`

Description: Total Number of cmsh/cmgui/python/node sessions

Parameter: `activeSessionCount`

Type: `unsigned integer`

Description: Number of currently active sessions

Parameter: `httpdNumWorkers`

Type: `unsigned integer`

Description: Number of threads handing http requests

Parameter: `httpdNumFreeWorkers`

Type: `unsigned integer`

Description: Number of threads free to handle http requests

Parameter: `httpdConnectionCounter`

Type: unsigned integer

Description: Total number of http connections handled by CMDaemon

Parameter: httpRequestCounter

Type: unsigned integer

Description: Total number of http request handled by CMDaemon

Parameter: httpdBytesRead

Type: unsigned integer

Description: Bytes read from http request

Parameter: httpdBytesWritten

Type: unsigned integer

Description: Bytes written in response to http requests

5.2.82 CMJobConfig: Entity

parent: Entity

Parameter: name

Type: string

Description: CMJob config name

Parameter: provider

Type: reference to CloudProvider

Description: Cloud provider

Parameter: storageNodePolicies

Type: list of StorageNodePolicy

Description: Storage node policies

Parameter: activeStorageNodePolicy

Type: StorageNodePolicy or None

Description: This policy will be used to start new storage nodes

Parameter: extraOptions

Type: list of strings

Description: Extra options

5.2.83 CMJobIntermediateStorage: Entity

parent: Entity

5.2.84 CMService: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: `tokens`

Type: list of strings

Description: Tokens belonging to this service

5.2.85 `ComputeNode: Node`

parent: `Node`

Parameter: `installMode`

Type: string

Description: Installmode to be used by default, if empty use category `installMode`

Parameter: `nextBootInstallMode`

Type: string

Description: Installmode to be used during the next boot, will be cleared during boot

Parameter: `blockDevicesClearedOnNextBoot`

Type: list of strings

Description: List of block devices that will be cleared during the next boot

Parameter: `initialize`

Type: string

Description: Node specific initialize script

Parameter: `finalize`

Type: string

Description: Node specific finalize script

Parameter: `raidconf`

Type: string

Description: Node specific Hardware RAID configuration

Parameter: `category`

Type: reference to `Category`

Description: Category to which this node belongs

Parameter: `disksetup`

Type: string

Description: Node specific disk setup

Parameter: `excludeListFull`

Type: string

Description: Exclude list for full install

Parameter: `excludeListSync`

Type: string

Description: Exclude list for sync install

Parameter: `excludeListUpdate`

Type: string

Description: Exclude list for update

Parameter: `excludeListGrab`

Type: string

Description: Exclude list for grabbing to an existing image

Parameter: `excludeListGrabnew`

Type: string

Description: Exclude list for grabbing to a new image

Parameter: `nodeInstallerDisk`

Type: boolean

Description: The node has its own node installer disk

Parameter: `installBootRecord`

Type: boolean

Description: Install boot record on local disk

Parameter: `managementNetwork`

Type: reference to Network or None

Description: Determines what network should be used for management traffic. If not set, category or partition setting is used.

Parameter: `dataNode`

Type: boolean

Description: If enabled the node will never do a FULL install without explicit user confirmation

Parameter: `allowNetworkingRestart`

Type: boolean

Description: Allow node to update ifcfg files and restart networking

Parameter: `softwareImageProxy`

Type: SoftwareImageProxy or None

Description: Software image used by node

Parameter: `kernelVersion`

Type: string

Description: Kernel version used

Parameter: `kernelParameters`

Type: string

Description: Kernel parameters passed to the kernel at boot time

Parameter: `kernelOutputConsole`

Type: string

Description: Kernel output console used at boot time

Parameter: `modules`

Type: list of `KernelModule`

Description: Manage kernel modules loaded in this node

Parameter: `bootLoader`

Type: enum

Description: Boot loader

Parameter: `bootLoaderProtocol`

Type: enum

Description: Boot loader protocol for retrieving `initrd` and `vmlinuz`

Parameter: `bootLoaderFile`

Type: string

Description: Alternative boot loader file

Parameter: `fips`

Type: enum

Description: Federal Information Processing Standard Security Requirements

Parameter: `templateNode`

Type: boolean

Description: Indicate this is a template node and should not be powered on and booted

Parameter: `fromTemplateNode`

Type: UUID

Description: Indicate from which template node this node was copied

5.2.86 `ConfigFileVersion:Entity`

parent: `Entity`

Parameter: `node_uuid`

Type: UUID

Description: Node

Parameter: `filename`

Type: string

Description: File name

Parameter: `content`

Type: string

Description: Content of the file

Parameter: `creationTime`

Type: timestamp

Description: Creation time

5.2.87 ConfigurationOverlay: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: allHeadNodes

Type: boolean

Description: All head nodes

Parameter: nodes

Type: list of references to Node

Description: List of nodes belonging to this group

Parameter: categories

Type: list of references to Category

Description: List of categories belonging to this group

Parameter: customizationFiles

Type: list of CustomizationFile

Description: Config file customizations

Parameter: roles

Type: list of Role

Description: Assign the roles

Parameter: priority

Type: integer

Description: Priority of the roles, node roles have a 750 priority, and category roles 250, set to -1 disable the overlay

5.2.88 ConnectivityCheckerSubSystemInfo: SubSystemInfo

parent: SubSystemInfo

Parameter: stopped

Type: unsigned integer

Description: Stopped

Parameter: updateCallback

Type: unsigned integer

Description: Update callback defined

Parameter: changeCallback

Type: unsigned integer

Description: Change callback defined

Parameter: `ttl`

Type: unsigned integer

Description: `ttl`

Parameter: `idOffset`

Type: unsigned integer

Description: Ping ID offset

Parameter: `interval`

Type: unsigned integer

Description: Interval

Parameter: `timeout`

Type: unsigned integer

Description: Timeout

Parameter: `sequence`

Type: unsigned integer

Description: Sequence ID

Parameter: `activeSequences`

Type: unsigned integer

Description: Active ping sequences still being waited for

Parameter: `activeNodeSequences`

Type: unsigned integer

Description: Number of nodes in active ping sequences still being waited for

Parameter: `nodes`

Type: unsigned integer

Description: Nodes being pinged

Parameter: `nodeSequences`

Type: unsigned integer

Description: Number of pings nodes are waiting for

Parameter: `updates`

Type: unsigned integer

Description: Total number of handled updates

Parameter: `changes`

Type: unsigned integer

Description: Total number of handled changes

5.2.89 Consolidator: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: maxAge

Type: float

Description: Maximal age of historic data, 0 for infinite

Parameter: maxSamples

Type: unsigned integer

Description: Maximal samples of historic data, 0 for infinite

Parameter: interval

Type: float

Description: Sampling interval

Parameter: offset

Type: float

Description: Time offset for sampling interval

Parameter: kind

Type: enum

Description: Kind of consolidation to be done

5.2.90 ContainerInfo: Entity

parent: Entity

Parameter: name

Type: string

Description: The name of the container

Parameter: containerId

Type: string

Description: The id

Parameter: image

Type: string

Description: The name of the image

Parameter: imageId

Type: string

Description: The sha id of the image

Parameter: state

Type: string

Description: The state of the container

Parameter: `startTime`

Type: `timestamp`

Description: The time when the container started

Parameter: `lastTerminationState`

Type: `string`

Description: The last state when the container terminated

Parameter: `reason`

Type: `string`

Description: The reason for the termination

Parameter: `lastExitCode`

Type: `integer`

Description: The exit code of the container

Parameter: `previousStartTime`

Type: `timestamp`

Description: The previous start time

Parameter: `previousFinishTime`

Type: `timestamp`

Description: The previous finish time

Parameter: `ready`

Type: `boolean`

Description: Whether the container is ready or not

Parameter: `restartCount`

Type: `integer`

Description: The number of restarts of the container

Parameter: `environmentVariables`

Type: `list of strings`

Description: The environment variables passed to the container

5.2.91 CustomizationEntry: Entity

parent: `Entity`

Parameter: `key`

Type: `string`

Description: Name of the key

Parameter: `value`

Type: `string`

Description: Value for the key

Parameter: enabled

Type: boolean

Description: none

Parameter: action

Type: enum

Description: Determines how entres are added

Parameter: formatting

Type: string

Description: none

Parameter: separator

Type: string

Description: none

5.2.92 CustomizationFile: Entity

parent: Entity

Parameter: name

Type: string

Description: none

Parameter: entries

Type: list of CustomizationEntry

Description: Config file customization entries

Parameter: label

Type: string

Description: none

Parameter: type

Type: enum

Description: Determines file type

Parameter: managedsection

Type: enum

Description: Determines how cmdaemon should customize the file

Parameter: formatting

Type: string

Description: none

Parameter: enabled

Type: boolean

Description: *none*

5.2.93 Device: Entity

parent: Entity

Parameter: tag

Type: string

Description: Hardware tag

Parameter: hostname

Type: string

Description: Hostname

Parameter: mac

Type: MAC

Description: MAC address

Parameter: defaultGateway

Type: IP

Description: Default gateway for the device

Parameter: creationTime

Type: timestamp

Description: Date on which node was defined

Parameter: partition

Type: reference to Partition

Description: Partition to which this device belongs

Parameter: switchPorts

Type: list of SwitchPort

Description: Switch ports

Parameter: powerDistributionUnits

Type: list of PDUPort

Description: List of outlets on powerdistributionunits

Parameter: rack

Type: RackPosition or None

Description: Name of the rack in which the device resides

Parameter: indexInsideContainer

Type: unsigned integer

Description: Index inside container object (used for drawing twins/chassis inside rackview)

Parameter: powerControl

Type: string

Description: Specifies which type of power control feature is being used (values: none, apc, custom, cloud, ipmi0, ilo0, drac0, rf0, cimc0 or rshim0)

Parameter: customPowerScript

Type: string

Description: Script that will be used to perform power on/off/reset/status operations

Parameter: customPowerScriptArgument

Type: string

Description: Argument for the custom power script

Parameter: customPingScript

Type: string

Description: Script that will be used to ping a device

Parameter: customPingScriptArgument

Type: string

Description: Argument for the custom ping script

Parameter: notes

Type: string

Description: Administrator notes

Parameter: userdefined1

Type: string

Description: A free text field passed to custom scripts

Parameter: userdefined2

Type: string

Description: A free text field passed to custom scripts

Parameter: userDefinedResources

Type: list of strings

Description: User defined resources used to filter monitoring data producers

Parameter: supportsGNSS

Type: boolean

Description: Supports GNSS location

5.2.94 DeviceStatus: Entity

parent: Entity

Parameter: ref_device_uuid

Type: UUID

Description: Device

Parameter: status

Type: enum

Description: Status determined by ping and report

Parameter: `reportedStatus`

Type: `enum`

Description: Reported status

Parameter: `reportedStatusTimestamp`

Type: `unsigned integer`

Description: Reported status timestamp in steady clock epoch milliseconds

Parameter: `terminated`

Type: `boolean`

Description: *none*

Parameter: `closed`

Type: `boolean`

Description: *none*

Parameter: `muted`

Type: `boolean`

Description: *none*

Parameter: `burning`

Type: `boolean`

Description: *none*

Parameter: `unassigned`

Type: `boolean`

Description: *none*

Parameter: `noPingMethod`

Type: `boolean`

Description: *none*

Parameter: `nullIdentifier`

Type: `boolean`

Description: *none*

Parameter: `additionalCost`

Type: `boolean`

Description: *none*

Parameter: `restartRequired`

Type: `boolean`

Description: *none*

Parameter: `healthCheckFailed`

Type: boolean

Description: *none*

Parameter: healthCheckUnknown

Type: boolean

Description: *none*

Parameter: provisioningFailed

Type: boolean

Description: *none*

Parameter: stateFlapping

Type: boolean

Description: *none*

Parameter: stateFlappingCheckTime

Type: unsigned integer

Description: *none*

Parameter: pingable

Type: boolean

Description: *none*

Parameter: sshable

Type: boolean

Description: *none*

Parameter: infoMessage

Type: string

Description: *none*

Parameter: userMessage

Type: string

Description: *none*

Parameter: toolMessage

Type: string

Description: *none*

Parameter: restartRequiredReasons

Type: list of strings

Description: *none*

Parameter: gracePeriod

Type: unsigned integer

Description: *none*

Parameter: powerResetOnUnreachableCount

Type: unsigned integer

Description: *none*

Parameter: failBeforeDown

Type: unsigned integer

Description: *none*

Parameter: updateIndex

Type: unsigned integer

Description: *none*

Parameter: updateDisplay

Type: boolean

Description: *none*

Parameter: hasClientDaemon

Type: boolean

Description: *none*

Parameter: allowDataNodeFullInstall

Type: boolean

Description: *none*

5.2.95 DIGITSRole: Role

parent: Role

Parameter: version

Type: string

Description: DIGITS version

Parameter: port

Type: unsigned integer

Description: DIGITS port

Parameter: jobsDir

Type: string

Description: Location where job files are stored. Defined in DIGITS_JOBS_DIR

Parameter: logfileFilename

Type: string

Description: File for saving log messages. Defined in DIGITS_LOGFILE_FILENAME

Parameter: logfileLevel

Type: enum

Description: Minimum log message level to be saved (DEBUG/INFO/WARNING/ERROR/CRITICAL). Defined in DIGITS_LOGFILE_LEVEL

Parameter: `serverName`

Type: `string`

Description: The name of the server (accessible in the UI under 'Info'). Default is the system host-name. Defined in DIGITS_SERVER_NAME

Parameter: `modelStoreUrl`

Type: `string`

Description: A list of URL's, separated by comma. Default is the official NVIDIA store. Defined in DIGITS_MODEL_STORE_URL

Parameter: `urlPrefix`

Type: `string`

Description: A path to prepend before every URL. Sets the home-page to be at 'http://localhost/custom-prefix' instead of 'http://localhost/'. Defined in DIGITS_URL_PREFIX

Parameter: `caffeRoot`

Type: `string`

Description: Path to your local Caffe build. Should contain build/tools/caffe and python/caffe/. Defined in CAFFE_ROOT

Parameter: `torchRoot`

Type: `string`

Description: Path to your local Torch build. Should contain install/bin/th. Defined in TORCH_ROOT

Parameter: `tensorflowRoot`

Type: `string`

Description: Path to your local TensorFlow build. Defined in TENSORFLOW_ROOT

5.2.96 `DirectorRole: Role`

parent: `Role`

Parameter: `syncFSParts`

Type: `enum`

Description: Sync FSParts mode

Parameter: `fsparts`

Type: list of references to `FSPart`

Description: `FSParts`

Parameter: `disableAutomaticExports`

Type: `boolean`

Description: Disable creation of automatic filesystem exports

Parameter: `createHomeDirectories`

Type: `enum`

Description: Create home directories for ldap users

Parameter: `whitelistUsers`

Type: list of strings

Description: Whitelist users

Parameter: whitelistGroups

Type: list of strings

Description: Whitelist groups

5.2.97 DiskAssertion: Entity

parent: Entity

Parameter: name

Type: string

Description: Name.

Parameter: script

Type: string

Description: Assertion script.

Parameter: args

Type: string

Description: Script arguments.

5.2.98 DiskDevice: Entity

parent: Entity

Parameter: requiredSize

Type: string

Description: Required Size

Parameter: vendor

Type: string

Description: Required Vendor

Parameter: blockDevs

Type: list of strings

Description: Block Devices

Parameter: partitions

Type: list of DiskPartition

Description: Partitions

Parameter: assertions

Type: list of DiskAssertion

Description: Assertions

5.2.99 DiskInfo: Entity

parent: Entity

Parameter: name

Type: string

Description: *none*

Parameter: model

Type: string

Description: *none*

Parameter: vendor

Type: string

Description: *none*

Parameter: size

Type: unsigned integer

Description: *none*

Parameter: rev

Type: string

Description: *none*

Parameter: ioScheduler

Type: string

Description: *none*

5.2.100 DiskPartition: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: size

Type: string

Description: Size

Parameter: type

Type: string

Description: Type

Parameter: mountpoint

Type: string

Description: Mount point

Parameter: mountoptions

Type: string

Description: Mount options

Parameter: filesystem

Type: string

Description: Filesystem

5.2.101 DiskPartitionInfo: Entity

parent: Entity

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: name

Type: string

Description: The partition name

Parameter: majorID

Type: unsigned integer

Description: Major

Parameter: minorID

Type: unsigned integer

Description: Minor

Parameter: blocks

Type: unsigned integer

Description: Blocks

Parameter: cipher

Type: string

Description: Encryption cipher

Parameter: slaves

Type: list of strings

Description: Slaves

Parameter: deviceMapper

Type: string

Description: Device mapper

5.2.102 DiskRaid: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: size

Type: string

Description: Size

Parameter: level

Type: integer

Description: Level

Parameter: partitions

Type: list of strings

Description: Partitions

Parameter: mountpoint

Type: string

Description: Mount point

Parameter: mountoptions

Type: string

Description: Mount options

Parameter: filesystem

Type: string

Description: Filesystem

Parameter: swap

Type: boolean

Description: Use for swap

5.2.103 DiskSetup: Entity

parent: Entity

Parameter: devices

Type: list of DiskDevice

Description: List of block devices.

Parameter: raids

Type: list of DiskRaid

Description: List of raid devices.

Parameter: volumeGroups

Type: list of DiskVolumeGroup

Description: List of volume groups.

Parameter: diskless

Type: boolean

Description: If set the node will have its root file-system in RAM.

Parameter: maxMemSize

Type: string

Description: Maximum amount (in bytes) of RAM the root file-system can use.

5.2.104 `DiskVolume: Entity`**parent:** Entity**Parameter:** name**Type:** string**Description:** Name**Parameter:** size**Type:** string**Description:** Size**Parameter:** mountpoint**Type:** string**Description:** Mount point**Parameter:** mountoptions**Type:** string**Description:** Mount options**Parameter:** filesystem**Type:** string**Description:** Filesystem**5.2.105** `DiskVolumeGroup: Entity`**parent:** Entity**Parameter:** name**Type:** string**Description:** Name**Parameter:** extentSize**Type:** string**Description:** Size**Parameter:** physicalVolumes**Type:** list of strings**Description:** Physical volumes**Parameter:** logicalVolumes**Type:** list of DiskVolume**Description:** Logical volumes**5.2.106** `DnsRole: Role`**parent:** Role**Parameter:** nodegroups**Type:** list of references to NodeGroup

Description: List of node groups which can boot from this node

Parameter: `categories`

Type: list of references to Category

Description: List of categories which can boot from this node

Parameter: `racks`

Type: list of references to Rack

Description: List of racks which can boot from this node

Parameter: `allowQuery`

Type: list of strings

Description: List of additional free hosts to allow queries from

Parameter: `options`

Type: list of strings

Description: List of additional key=value pairs to add to the options

Parameter: `maxCacheSize`

Type: unsigned integer

Description: Maximum cache size

Parameter: `cleaningInterval`

Type: unsigned integer

Description: Cleaning cache interval

Parameter: `maxCacheTTL`

Type: unsigned integer

Description: Maximal cache TTL

Parameter: `maxNegativeCacheTTL`

Type: unsigned integer

Description: Maximal cache negative response TTL

5.2.107 `DockerHostRole`: Role

parent: Role

Parameter: `spool`

Type: string

Description: Root of the Docker runtime

Parameter: `tmpDir`

Type: string

Description: Location used for temporary files (token \$spool is replaced to path to docker runtime root directory)

Parameter: `enableSelinux`

Type: boolean

Description: Enable selinux support in docker daemon

Parameter: defaultUlimits

Type: list of strings

Description: Set the default ulimit options to use for all containers

Parameter: debug

Type: boolean

Description: Enable debug mode

Parameter: logLevel

Type: string

Description: Set the logging level

Parameter: bridgeIp

Type: string

Description: Network bridge IP

Parameter: bridge

Type: string

Description: Attach containers to a network bridge

Parameter: mtu

Type: unsigned integer

Description: Set the containers network MTU (in bytes)

Parameter: apiSockets

Type: list of strings

Description: Daemon socket(s) to connect to (-H docker daemon option)

Parameter: iptables

Type: boolean

Description: Enable addition of iptables rules

Parameter: userNamespaceRemap

Type: string

Description: User/Group setting for user namespaces

Parameter: insecureRegistries

Type: list of strings

Description: If you have a registry secured with https but do not have proper certs distributed, you can tell docker to not look for full authorization by adding the registry to this list. Accepted Format : CIDR or hostname:port

Parameter: enableTls

Type: boolean

Description: Use TLS

Parameter: `verifyTls`

Type: `boolean`

Description: Use TLS and verify the remote

Parameter: `tlsCa`

Type: `string`

Description: Trust certs signed only by this CA

Parameter: `tlsCertificate`

Type: `string`

Description: Path to TLS certificate file

Parameter: `tlsKey`

Type: `string`

Description: Path to TLS key file

Parameter: `certificatesPath`

Type: `string`

Description: Path to docker certificates

Parameter: `storageBackends`

Type: list of `DockerStorageBackend`

Description: Docker storage backends

Parameter: `containerdSocket`

Type: `string`

Description: Path to containerd socket

Parameter: `runtime`

Type: `string`

Description: Docker runtime

Parameter: `options`

Type: list of strings

Description: Additional parameters for docker daemon

5.2.108 `DockerStorageAufsBackend: DockerStorageBackend`

parent: `DockerStorageBackend`

Parameter: `options`

Type: list of strings

Description: Extra options used for the AUFS storage backend

5.2.109 DockerStorageBackend: Entity**parent:** Entity**Parameter:** name**Type:** string**Description:** Docker storage backend name**5.2.110 DockerStorageDeviceMapperBackend: DockerStorageBackend****parent:** DockerStorageBackend**Parameter:** loopDataSize**Type:** string**Description:** Size to use when creating the loopback file for the 'data' device which is used for the thin pool (driver option: dm.loopdatasize)**Parameter:** loopMetadataSize**Type:** string**Description:** Size to use when creating the loopback file for the 'metadadata' device which is used for the thin pool (driver option: dm.loopmetadatasize)**Parameter:** baseSize**Type:** string**Description:** Size to use when creating the base device, which limits the size of images and container (driver option: dm.basesize)**Parameter:** poolDevice**Type:** string**Description:** Custom block storage device to use for the thin pool (driver option: dm.thinpooldev)**Parameter:** filesystem**Type:** string**Description:** Filesystem type to use for the base device (driver option: dm.fs)**Parameter:** blockSize**Type:** string**Description:** Custom blocksize to use for the thin pool (driver option: dm.blocksize)**Parameter:** blkDiscard**Type:** boolean**Description:** Enables or disables the use of blkdiscard when removing devicemapper devices (driver option: dm.blkdiscard)**Parameter:** mkfsArguments**Type:** list of strings**Description:** Extra mkfs arguments to be used when creating the base device (drive option: dm.mkfsarg)**Parameter:** mountOptions**Type:** list of strings

Description: Extra mount options used when mounting the thin devices (drive option: dm.mountopt)

5.2.111 DockerStorageOverlay2Backend: DockerStorageBackend

parent: DockerStorageBackend

Parameter: overrideKernelCheck

Type: boolean

Description: Override the kernel check to allow overlay2

Parameter: size

Type: string

Description: Default max size of the container (empty = unlimited)

Parameter: options

Type: list of strings

Description: Extra options used for the AUFS storage backend

5.2.112 DPUInfo: Entity

parent: Entity

Parameter: index

Type: list of unsigned numbers

Description: none

Parameter: name

Type: list of strings

Description: none

Parameter: info

Type: string

Description: none

Parameter: opnStr

Type: string

Description: none

5.2.113 DPUNode: ComputeNode

parent: ComputeNode

Parameter: dpuSettings

Type: DPUSettings or None

Description: Submode containing all DPU node settings

Parameter: hostNode

Type: reference to Node

Description: Host node

5.2.114 DPUSettings: Entity**parent:** Entity**Parameter:** operation_mode**Type:** enum**Description:** Operation mode**Parameter:** display_level**Type:** enum**Description:** Display level**Parameter:** boot_mode**Type:** enum**Description:** Boot mode**Parameter:** drop_mode**Type:** enum**Description:** Drop mode**Parameter:** boot_timeout**Type:** unsigned integer**Description:** Boot timeout**Parameter:** boot_order**Type:** list of strings**Description:** Boot order**Parameter:** interface_mode_port1**Type:** enum**Description:** Interface mode port 1**Parameter:** interface_mode_port2**Type:** enum**Description:** Interface mode port 2**Parameter:** hw_offload**Type:** boolean**Description:** Offload OVS to hardware**Parameter:** keyValueSettings**Type:** KeyValueSettings or None**Description:** Key value settings which can be passed to the DPU manage script**5.2.115 DrainAction: Entity****parent:** Entity**Parameter:** node**Type:** reference to Node

Description: Node

Parameter: actions

Type: list of references to MonitoringAction

Description: Actions to execute after the node has been drained

5.2.116 DrainResult: Entity

parent: Entity

Parameter: ref_entity_uuid

Type: UUID

Description: Entity

Parameter: success

Type: boolean

Description: Success

Parameter: ref_node_uuids

Type: list of unsigned numbers

Description: Node

Parameter: ref_queue_uuids

Type: list of unsigned numbers

Description: Job queue

Parameter: reason

Type: list of strings

Description: Reason

Parameter: result

Type: enum

Description: Result

5.2.117 EC2AvailabilityZone: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

5.2.118 EC2EBSSStorage: EC2Storage

parent: EC2Storage

Parameter: volumeId

Type: string

Description: Volume ID assigned by EC2 EC2

Parameter: size

Type: unsigned integer

Description: Size

Parameter: `persistent`

Type: boolean

Description: Persistent storage will not be removed when instance is removed

Parameter: `availabilityZone`

Type: string

Description: Availability zone set by EC2

Parameter: `creationTime`

Type: timestamp

Description: Time of creation in EC2

Parameter: `status`

Type: string

Description: Status of EBS volume in EC2

Parameter: `volumeType`

Type: enum

Description: Specifies what type of EBS volume to use

Parameter: `iops`

Type: unsigned integer

Description: Specifies the IOPS rate for the provisioned IOPS volume type

Parameter: `encrypted`

Type: boolean

Description: *none*

Parameter: `snapshotId`

Type: string

Description: ID of the snapshot which should be used to instantiate the new disk. This field can be used to speed up node provisioning by first provisioning a cloud compute node, creating a snapshot of its volumes, and then setting that snapshot ID in this field for remaining cloud compute nodes.

5.2.119 EC2EphemeralStorage: EC2Storage

parent: EC2Storage

Parameter: `volumeId`

Type: string

Description: Ephemral ID

Parameter: `size`

Type: unsigned integer

Description: Size

5.2.120 EC2Image: Entity

parent: Entity

Parameter: name

Type: string

Description: The name of the image.

Parameter: id

Type: string

Description: The AMI ID

Parameter: apiHash

Type: string

Description: The API hash used to select compatible images.

Parameter: regionName

Type: string

Description: The name of the image region.

5.2.121 EC2OnDemandPrice: Entity

parent: Entity

Parameter: regionName

Type: string

Description: Region name.

Parameter: instanceType

Type: string

Description: Instance type.

Parameter: price

Type: string

Description: On-demand price.

Parameter: currency

Type: string

Description: Currency.

5.2.122 EC2Provider: CloudProvider

parent: CloudProvider

Parameter: APIRegionName

Type: string

Description: AWS region to be used for listing available regions

Parameter: accessKeyId

Type: string

Description: AWS access key ID

Parameter: `accessKeySecret`

Type: `string`

Description: AWS secret access key

Parameter: `iamRoleName`

Type: `string`

Description: IAM role to get AWS credentials from. The role must be assigned to the COD-AWS head node.

Parameter: `VPCs`

Type: list of `EC2VPC`

Description: List of VPCs

Parameter: `regions`

Type: list of references to `EC2Region`

Description: *none*

Parameter: `defaultRegion`

Type: reference to `EC2Region` or `None`

Description: Default region to start instances in

Parameter: `defaultType`

Type: reference to `EC2Type` or `None`

Description: Default type for instances

Parameter: `defaultDirectorType`

Type: reference to `EC2Type` or `None`

Description: Default type for cloud director instances

Parameter: `imageOwners`

Type: list of strings

Description: AWS Account IDs to be used to search for images

Parameter: `addJobBasedTag`

Type: `boolean`

Description: Enable automatic tagging of cloud resources with information of running cloud jobs to allow cost monitoring

Parameter: `JobIdTagName`

Type: `string`

Description: The name of the tag that contains the job ID when using job based tagging

Parameter: `JobAccountTagName`

Type: `string`

Description: The name of the tag that contains the job account when using job based tagging

Parameter: JobUserTagName

Type: string

Description: The name of the tag that contains the user name when using job based tagging

Parameter: JobNameTagName

Type: string

Description: The name of the tag that contains the job name when using job based tagging

Parameter: billingAccessKeyId

Type: string

Description: AWS billing access key ID

Parameter: billingAccessKeySecret

Type: string

Description: AWS billing secret access key

Parameter: marketplaceUsePolicy

Type: enum

Description: Preference towards using marketplace AMIs

5.2.123 EC2Region: CloudRegion

parent: CloudRegion

Parameter: url

Type: string

Description: url

Parameter: availabilityZones

Type: list of EC2AvailabilityZone

Description: Availability zones

5.2.124 EC2RegionAMI: Entity

parent: Entity

Parameter: region

Type: reference to EC2Region

Description: The cloud region containing this AMI

Parameter: amiID

Type: string

Description: The AMI ID

5.2.125 EC2Settings: CloudSettings

parent: CloudSettings

Parameter: instanceId

Type: string

Description: Instance-ID provided by EC2

Parameter: `spotId`

Type: `string`

Description: Spot-request-ID provided by EC2

Parameter: `sshConnectString`

Type: `string`

Description: SSH connection string provided by EC2

Parameter: `externalIP`

Type: `IP`

Description: The external IP address as set by the cloudprovider

Parameter: `releaseStaticIPOnTermination`

Type: `boolean`

Description: Release Static IP on termination of the instance

Parameter: `useKernelAndInitrdFromTheSoftwareImage`

Type: `boolean`

Description: Make the cloud node's node-installer download the kernel and the initrd from the software image configured for this cloud node and then reboot the cloud node to use those, instead of using the kernel and initrd already present on the node-installer's cloud image.

Parameter: `type`

Type: reference to `EC2Type` or `None`

Description: Type for instance

Parameter: `region`

Type: reference to `EC2Region` or `None`

Description: Region for instance

Parameter: `imageId`

Type: `string`

Description: ID of the AMI used to create instance ('latest': use latest AMI, '': inherit AMI from cloud provider)

Parameter: `usesMarketplaceImage`

Type: `boolean`

Description: Whether a paid AWS Marketplace is used for this node

Parameter: `allocatePublicIP`

Type: `boolean`

Description: Whether to allocate a public IP for this instance. Always true for cloud directors.

Parameter: `sourceDestinationCheck`

Type: `boolean`

Description: Whether to perform source/destination checks on the instance traffic.

Parameter: `kernel`

Type: `string`

Description: Kernel used to create instance

Parameter: `initrd`

Type: `string`

Description: Initial ramdisk used to create instance

Parameter: `options`

Type: `string`

Description: User defined options passed to EC2 on instance creation

Parameter: `storage`

Type: list of `EC2Storage`

Description: Assign EC2 storage

Parameter: `cpuOptions`

Type: `string`

Description: CPU Options in AWS shorthand syntax (e.g: `CoreCount=8,ThreadsPerCore=1`)

Parameter: `spotPrice`

Type: `float`

Description: Maximum price to start instance with

Parameter: `spotPersistent`

Type: `boolean`

Description: Persistent spot instances are requested again after they are automatically stopped, because price became too high

Parameter: `useNonDefaultVirtualizationType`

Type: `boolean`

Description: *none*

Parameter: `placementGroup`

Type: `string`

Description: Start instance in the specified placement group

Parameter: `iamInstanceProfile`

Type: `string`

Description: Name or ARN of instance profile to associate with

Parameter: `capacityReservationPreference`

Type: `string`

Description: Capacity reservation preference ('open' or 'none')

Parameter: capacityReservationId

Type: string

Description: Capacity reservation ID

Parameter: capacityReservationResourceGroupARN

Type: string

Description: Capacity reservation resource group ARN

5.2.126 EC2SpotPrice: Entity

parent: Entity

Parameter: az

Type: string

Description: Availabiliy zone.

Parameter: instanceType

Type: string

Description: Instance type.

Parameter: price

Type: string

Description: Spot price.

Parameter: timestamp

Type: unsigned integer

Description: Price timestamp.

5.2.127 EC2Storage: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: drive

Type: string

Description: Mount device as /dev/?

Parameter: tags

Type: list of strings

Description: List of tags that will be assigned to storage

5.2.128 EC2Type: CloudType

parent: CloudType

Parameter: virtualizationType

Type: string

Description: Virtualization type.

5.2.129 EC2VPC:Entity

parent: Entity

Parameter: name

Type: string

Description: User-defined name of the private cloud

Parameter: vpcID

Type: string

Description: AWS VPC identifier

Parameter: defaultImageId

Type: string

Description: ID of the default AMI to start instances with ('latest' means using the latest AMI)

Parameter: mainRouteTable

Type: string

Description: Main route table AWS ID

Parameter: defaultACL

Type: string

Description: Default network access controll list ID

Parameter: internetGatewayID

Type: string

Description: The AWS ID of the internet gateway assigned to this VPC

Parameter: region

Type: reference to EC2Region

Description: AWS region of the VPC

Parameter: subnets

Type: list of references to Network

Description: Subnets (networks) associated with the VPC

Parameter: baseAddress

Type: IP

Description: Base IP address of the VPC

Parameter: netmaskBits

Type: integer

Description: Number of netmask Bits

Parameter: securityGroupNode

Type: string

Description: Security group ID of the cloud nodes

Parameter: securityGroupDirector

Type: string

Description: Security group ID of the cloud director

Parameter: routeTableIdPublic

Type: string

Description: Routing table ID for the public subnet

Parameter: routeTableIdPrivate

Type: string

Description: Routing table ID for private subnets

Parameter: setDirectorAsDefaultGateway

Type: boolean

Description: If specified, a default route via the director will be created in the private subnet. This is not necessary if the private subnet was already configured and the nodes have access to the head node (e.g Direct Connect)

Parameter: useInternalIPForDirectorIP

Type: boolean

Description: If specified, CMDaemon will use cloud director's internal IP, instead of a public/external IP. Useful when you have existing IP connectivity to your VPC.

Parameter: enforceDirectorIP

Type: IP

Description: If specified, CMDaemon will assume this is the cloud director's IP address.

5.2.130 EdgeDirectorRole: DirectorRole

parent: DirectorRole

Parameter: nodePowerOperations

Type: boolean

Description: Execute all power operations of nodes in the edge site on the director

Parameter: directorPowerOperations

Type: boolean

Description: Execute all power operation of the director on the director, note that this means it cannot be powered on

Parameter: nodeSelectionBootRole

Type: boolean

Description: Use the edge site as a node selection mechanism for the boot role

Parameter: nodeSelectionDnsRole

Type: boolean

Description: Use the edge site as a node selection mechanism for the DNS role

Parameter: nodeSelectionProvisioningRole

Type: boolean

Description: Use the edge site as a node selection mechanism for the provisioning role

Parameter: addNamedService

Type: boolean

Description: Add named service to the node

Parameter: addSlapdService

Type: boolean

Description: Add slapd service to the node

Parameter: addNtpdService

Type: boolean

Description: Add ntpd service to the node

Parameter: openTCPPortsOnHeadNode

Type: list of unsigned numbers

Description: The list of TCP ports that will be opened in shorewall on the head node

Parameter: openUDPPortsOnHeadNode

Type: list of unsigned numbers

Description: The list of UDP ports that will be opened in shorewall on the head node

Parameter: externallyVisibleIp

Type: IP

Description: IP that will be seen by other nodes when the director connects

Parameter: externallyVisibleHeadNodeIp

Type: IP

Description: Head node IP that will be use by this director

Parameter: syncCmShared

Type: boolean

Description: Sync /cm/shared if required

5.2.131 EdgeSite: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: contact

Type: list of strings

Description: Names of contacts

Parameter: adminEmail

Type: list of strings

Description: Administrator's email

Parameter: address

Type: string

Description: Address

Parameter: city

Type: string

Description: City

Parameter: country

Type: string

Description: Country

Parameter: timeZoneSettings

Type: TimeZoneSettings or None

Description: Time zone

Parameter: notes

Type: string

Description: Notes

Parameter: nodes

Type: list of references to ComputeNode

Description: List of nodes in this site

Parameter: switches

Type: list of references to Switch

Description: List of switches in this site

Parameter: genericDevices

Type: list of references to GenericDevice

Description: List of generic devices in this site

Parameter: unmanagedNodes

Type: list of references to UnmanagedNode

Description: List of unmanaged nodes in this site

Parameter: powerDistributionUnits

Type: list of references to PowerDistributionUnit

Description: List of power distribution units in this site

Parameter: fabricDevices

Type: list of references to FabricDevice

Description: List of power distribution units in this site

Parameter: racks

Type: list of references to Rack

Description: List of racks in this site

Parameter: secret

Type: string

Description: Edge site secret

Parameter: metaDataDeviceLabel

Type: string

Description: Meta data device label which to mount in order get the meta data

Parameter: metaDataUrl

Type: string

Description: Meta data URL that contains information for edge directors

Parameter: createISO

Type: enum

Description: Edge site site ISO/script for USB

Parameter: createIMG

Type: enum

Description: Edge site site IMG/script for MMC

Parameter: includeCMSharedOnMedia

Type: boolean

Description: Include /cm/shared on media to reduce the amount of rsync during edge director installation

Parameter: includeImagesOnMedia

Type: boolean

Description: Include images on media to reduce the amount of rsync during edge director installation

Parameter: preStageRequestID

Type: UUID

Description: Pre-staging request ID

Parameter: preStageRequestIDCreationTime

Type: timestamp

Description: Pre-staging request ID creation time

5.2.132 EntityManagersHash: Entity

parent: Entity

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: name

Type: list of strings

Description: Name

Parameter: hashes

Type: list of strings

Description: Hashes

5.2.133 EtcdCluster: Entity

parent: Entity

Parameter: name

Type: string

Description: Name of the Etcd cluster

Parameter: heartBeatInterval

Type: unsigned integer

Description: Time (in milliseconds) of a heartbeat interval

Parameter: electionTimeout

Type: unsigned integer

Description: Time (in milliseconds) for an election to timeout

Parameter: notes

Type: string

Description: Notes

Parameter: ca

Type: string

Description: The Certificate Authority (CA) Certificate path for Etcd, used to generate certificates for Etcd.

Parameter: cakey

Type: string

Description: The Certificate Authority (CA) Key path for Etcd, used to generate certificates for Etcd.

Parameter: memberCertificate

Type: string

Description: The Certificate path to use for Etcd cluster members, signed with the Etcd CA.

Parameter: memberCertificateKey

Type: string

Description: The Key path to use for Etcd cluster members, signed with the Etcd CA.

Parameter: clientCertificate

Type: string

Description: The Client Certificate used for Etcdctl for example.

Parameter: clientCertificateKey

Type: string

Description: The Client Certificate Key used for Etcdctl for example.

Parameter: clientCA

Type: string

Description: The Certificate Authority (CA) used for client certificates. When set it is assumed client certificate and key will be generated and signed with this CA by another party. Etcd still expects the path to be correct for the Client Certificate and Key.

Parameter: clientTypeEtcd

Type: unsigned integer

Description: client type in the CLIENT_TYPE_ETCD range

Parameter: moduleFileTemplate

Type: string

Description: Template for system module file

5.2.134 EtcdHostRole: Role

parent: Role

Parameter: memberName

Type: string

Description: Human-readable name for this member (\$hostname will be replaced to the node hostname)

Parameter: spool

Type: string

Description: Path to the data directory

Parameter: listenClientUrls

Type: list of strings

Description: List of URLs to listen on for client traffic

Parameter: listenPeerUrls

Type: list of strings

Description: List of URLs to listen on for peer traffic

Parameter: advertiseClientUrls

Type: list of strings

Description: List of this member's client URLs to advertise to the public

Parameter: advertisePeerUrls

Type: list of strings

Description: List of this member's peer URLs to advertise to the rest of the cluster

Parameter: snapshotCount

Type: unsigned integer

Description: Number of committed transactions to trigger a snapshot to disk

Parameter: `maxSnapshots`

Type: unsigned integer

Description: Maximum number of snapshot files to retain (0 is unlimited)

Parameter: `loglevel`

Type: enum

Description: Log level, only supports debug, info, warn, error, panic, or fatal.

Parameter: `options`

Type: list of strings

Description: Additional parameters for etcd daemon

Parameter: `etcdCluster`

Type: reference to `EtcdCluster`

Description: The Etcd cluster instance

Parameter: `memberCertificate`

Type: string

Description: Etcd member certificate, signed with CA specified in the Etcd Cluster. When set it will overrule the value from the `EtcdCluster` object.

Parameter: `memberCertificateKey`

Type: string

Description: Etcd member certificate key, signed with CA specified in the Etcd Cluster. When set it will overrule the value from the `EtcdCluster` object.

5.2.135 `ExcludeListSnippet`: Entity

parent: `Entity`

Parameter: `name`

Type: string

Description: Name

Parameter: `excludeList`

Type: list of strings

Description: Excluded paths in the node image update

Parameter: `disabled`

Type: boolean

Description: Disabled

Parameter: `noNewFiles`

Type: boolean

Description: No new files

Parameter: `modeSync`

Type: boolean

Description: Include this snippet when mode is sync

Parameter: modeFull

Type: boolean

Description: Include this snippet when mode is full

Parameter: modeUpdate

Type: boolean

Description: Include this snippet when mode is update

Parameter: modeGrab

Type: boolean

Description: Include this snippet when mode is grab

Parameter: modeGrabNew

Type: boolean

Description: Include this snippet when mode is grab new

5.2.136 ExternalOperationFirmwareInfoResult: ExternalOperationResult

parent: ExternalOperationResult

Parameter: firmwareInfo

Type: list of FirmwareInfo

Description: Firmware info

5.2.137 ExternalOperationJSONResult: ExternalOperationResult

parent: ExternalOperationResult

Parameter: output

Type: free JSON object

Description: Output

Parameter: error

Type: string

Description: Error

5.2.138 ExternalOperationRawResult: ExternalOperationResult

parent: ExternalOperationResult

Parameter: output

Type: string

Description: Output

Parameter: error

Type: string

Description: Error

5.2.139 ExternalOperationResult: Entity**parent:** Entity**Parameter:** ref_node_uuid**Type:** UUID**Description:** Node**Parameter:** result**Type:** enum**Description:** Result**5.2.140 FabricConfiguration: Entity****parent:** Entity**Parameter:** name**Type:** string**Description:** A short name to identify this fabric configuration**Parameter:** bindMethod**Type:** enum**Description:** RedFish REST method to use for sending binding changes**Parameter:** unbindAllAfterTopologyApply**Type:** boolean**Description:** Unbind all after topology apply**Parameter:** checkNodesDownForApplyTopology**Type:** boolean**Description:** Check nodes down for apply topology**Parameter:** checkResourceBoxesDownForApplyTopology**Type:** boolean**Description:** Check resources boxes down for apply topology**Parameter:** checkNodesDownForApplyBinding**Type:** boolean**Description:** Check nodes down for apply binding**Parameter:** checkResourceBoxesDownForApplyBinding**Type:** boolean**Description:** Check resources boxes down for apply binding**Parameter:** topology**Type:** FabricConfigurationTopology**Description:** Configured topology

5.2.141 FabricConfigurationBinding: Entity**parent:** Entity**Parameter:** ref_topology_zone_uuid**Type:** UUID**Description:** Topology zone**Parameter:** ref_topology_dsp_uuids**Type:** list of unsigned numbers**Description:** Topology DSPs bound to this zone, host**Parameter:** ref_topology_link_uuids**Type:** list of unsigned numbers**Description:** Topology links bound to this zone, host**5.2.142 FabricConfigurationBindingStatus: Entity****parent:** Entity**Parameter:** ref_fabric_switch_uuid**Type:** UUID**Description:** FabricSwitch**Parameter:** bindings**Type:** list of FabricConfigurationBinding**Description:** Bindings**5.2.143 FabricConfigurationFreeBinding: FabricConfigurationBinding****parent:** FabricConfigurationBinding**5.2.144 FabricConfigurationHostBinding: FabricConfigurationBinding****parent:** FabricConfigurationBinding**Parameter:** ref_topology_host_uuid**Type:** UUID**Description:** Topology host**5.2.145 FabricConfigurationLinkBinding: FabricConfigurationBinding****parent:** FabricConfigurationBinding**Parameter:** ref_topology_link_uuid**Type:** UUID**Description:** Topology link**5.2.146 FabricConfigurationTopology: Entity****parent:** Entity**Parameter:** name**Type:** string**Description:** Name of the topology

Parameter: `rawTemplate`

Type: free JSON object

Description: Template returned by the switch

Parameter: `ref_fabric_switch_uuids`

Type: list of unsigned numbers

Description: The fabric switches that provide this topology

Parameter: `topologyZones`

Type: list of `FabricConfigurationTopologyZone`

Description: Zones

Parameter: `topologyDevices`

Type: list of `FabricConfigurationTopologyDevice`

Description: Devices

Parameter: `topologyLinks`

Type: list of `FabricConfigurationTopologyLink`

Description: Links

Parameter: `topologySwitches`

Type: list of `FabricConfigurationTopologySwitch`

Description: Switches

Parameter: `topologyManagementSwitch`

Type: `FabricConfigurationTopologySwitch`

Description: The switch in the topology that will be used for all management operations

Parameter: `topologyBindings`

Type: list of `FabricConfigurationBinding`

Description: Fixed topology bindings

5.2.147 `FabricConfigurationTopologyDevice`: `FabricConfigurationTopologyItem`

parent: `FabricConfigurationTopologyItem`

Parameter: `switchIndex`

Type: unsigned integer

Description: The index of the switch the device is on

Parameter: `portIndex`

Type: unsigned integer

Description: The port of the switch the device is on

5.2.148 `FabricConfigurationTopologyDSP`: `FabricConfigurationTopologyDevice`

parent: `FabricConfigurationTopologyDevice`

Parameter: `fabricResourceBox`

Type: reference to `FabricResourceBox` or `None`

Description: Host

Parameter: side

Type: enum

Description: Side of the fabricResourceBox

5.2.149 FabricConfigurationTopologyHost: FabricConfigurationTopologyDevice

parent: FabricConfigurationTopologyDevice

Parameter: host

Type: reference to Node or None

Description: Host

Parameter: dynamic

Type: boolean

Description: Add the node as a dynamic host so it can be swapped out without applying the topology

5.2.150 FabricConfigurationTopologyItem: Entity

parent: Entity

Parameter: portsUsed

Type: unsigned integer

Description: The number of port used on the switch

Parameter: lanes

Type: unsigned integer

Description: The number of PCI lanes

5.2.151 FabricConfigurationTopologyLink: FabricConfigurationTopologyItem

parent: FabricConfigurationTopologyItem

Parameter: index

Type: unsigned integer

Description: Index

Parameter: name

Type: string

Description: Alternative name

Parameter: downstreamSwitchIndex

Type: unsigned integer

Description: The index of the switch of the downstream bridge connection

Parameter: downstreamPortIndex

Type: unsigned integer

Description: The port of the switch of the downstream bridge connection

Parameter: upstreamSwitchIndex

Type: unsigned integer

Description: The index of the switch of the upstream bridge connection

Parameter: upstreamPortIndex

Type: unsigned integer

Description: The port of the switch the of the upstream bridge connection

Parameter: type

Type: enum

Description: Type of link this ports connect

5.2.152 FabricConfigurationTopologySwitch: Entity

parent: Entity

Parameter: index

Type: unsigned integer

Description: The index of the zone

Parameter: fabricSwitch

Type: reference to FabricSwitch or None

Description: Switch

5.2.153 FabricConfigurationTopologyZone: Entity

parent: Entity

Parameter: index

Type: unsigned integer

Description: The index of the zone

Parameter: name

Type: string

Description: Name of the zone

5.2.154 FabricDevice: Device

parent: Device

Parameter: ip

Type: IP

Description: Ip address

Parameter: network

Type: reference to Network or None

Description: Network to which this switch is connected

Parameter: userName

Type: string

Description: Username used to send RedFish commands

Parameter: password

Type: string

Description: Password used to send RedFish commands

5.2.155 FabricNodeStatus: Entity

parent: Entity

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: good

Type: boolean

Description: Good

Parameter: info

Type: string

Description: Information

5.2.156 FabricResourceBox: FabricDevice

parent: FabricDevice

5.2.157 FabricResourceBoxDeviceFunctionInformation: Entity

parent: Entity

Parameter: id

Type: string

Description: ID

Parameter: name

Type: string

Description: Name

Parameter: description

Type: string

Description: Description

Parameter: deviceClass

Type: string

Description: Device class

Parameter: deviceId

Type: string

Description: Device ID

Parameter: revisionId

Type: string

Description: Revision ID

Parameter: subSystemId

Type: string

Description: Sub system ID

Parameter: subSystemVendorId

Type: string

Description: Sub system vendor ID

Parameter: vendorId

Type: string

Description: Vendor ID

5.2.158 FabricResourceBoxDeviceInformation: Entity

parent: Entity

Parameter: id

Type: string

Description: ID

Parameter: name

Type: string

Description: Name

Parameter: description

Type: string

Description: Description

Parameter: manufacturer

Type: string

Description: Manufacturer

Parameter: serialNumber

Type: string

Description: Serial number

Parameter: firmwareVersion

Type: string

Description: Firmware version

Parameter: slot

Type: string

Description: Slot

Parameter: functions

Type: list of FabricResourceBoxDeviceFunctionInformation

Description: Functions

5.2.159 FabricResourceBoxInformation: Entity**parent:** Entity**Parameter:** ref_topology_dsp_uuid**Type:** UUID**Description:** Topology DSP matching this resource/side**Parameter:** chassisType**Type:** string**Description:** Chassis type**Parameter:** description**Type:** string**Description:** Description**Parameter:** manufacturer**Type:** string**Description:** Manufacturer**Parameter:** redfishVersion**Type:** string**Description:** Red fish version**Parameter:** devices**Type:** list of FabricResourceBoxDeviceInformation**Description:** Devices**5.2.160 FabricSwitch: FabricDevice****parent:** FabricDevice**Parameter:** vendor**Type:** string**Description:** Fabric switch vendor**Parameter:** ports**Type:** unsigned integer**Description:** Number of ports**Parameter:** lanesPerPort**Type:** unsigned integer**Description:** PCI Lanes per port**5.2.161 FailoverRole: Role****parent:** Role**Parameter:** syncCmShared**Type:** boolean

Description: Passive head node has a local copy of /cm/shared

5.2.162 FileContent: Entity

parent: Entity

Parameter: filename

Type: string

Description: Filename

Parameter: content

Type: string

Description: Content

Parameter: username

Type: string

Description: Username

Parameter: permissions

Type: integer

Description: Permissions

5.2.163 FileWriteInfo: Entity

parent: Entity

Parameter: ref_device_uuid

Type: UUID

Description: Device

Parameter: path

Type: string

Description: Path

Parameter: timestamp

Type: timestamp

Description: Timestamp on which file was last changed

Parameter: actor

Type: enum

Description: Actor that wrote the file

Parameter: frozen

Type: boolean

Description: Frozen

5.2.164 FirewallInterface: Entity

parent: Entity

Parameter: zone

Type: string

Description: Zone

Parameter: interface

Type: string

Description: Interface

Parameter: broadcast

Type: string

Description: Broadcast

Parameter: options

Type: string

Description: Options

5.2.165 FirewallOpenPort:Entity

parent: Entity

Parameter: action

Type: enum

Description: Specifies the action to be taken if the connection request matches the rule

Parameter: network

Type: string

Description: Network

Parameter: port

Type: unsigned integer

Description: Port

Parameter: protocol

Type: enum

Description: Protocol

Parameter: address

Type: CIDR

Description: Network Address

Parameter: destination

Type: string

Description: Destination hosts to which the rule applies

Parameter: description

Type: string

Description: Description

5.2.166 FirewallPolicy: Entity**parent:** Entity**Parameter:** source**Type:** string**Description:** Source**Parameter:** dest**Type:** string**Description:** Dest**Parameter:** policy**Type:** enum**Description:** Policy**Parameter:** log**Type:** string**Description:** Log**Parameter:** options**Type:** string**Description:** Options**5.2.167 FirewallRole: Role****parent:** Role**Parameter:** shorewall**Type:** boolean**Description:** Manage shorewall**Parameter:** openPorts**Type:** list of FirewallOpenPort**Description:** The list of ports that will be opened on the node's firewall**Parameter:** zones**Type:** list of FirewallZone**Description:** The list of extra zones that will be defined in the node's firewall**Parameter:** interfaces**Type:** list of FirewallInterface**Description:** The list of extra interfaces that will be defined in the node's firewall**Parameter:** policies**Type:** list of FirewallPolicy**Description:** The list of extra policies that will be defined in the node's firewall

5.2.168 FirewallZone: Entity**parent:** Entity**Parameter:** zone**Type:** string**Description:** Zone**Parameter:** zone_type**Type:** enum**Description:** Type**Parameter:** options**Type:** string**Description:** Options**5.2.169 FirmwareInfo: Entity****parent:** Entity**Parameter:** ref_node_uuid**Type:** UUID**Description:** Node**Parameter:** filename**Type:** string**Description:** Filename**Parameter:** component**Type:** string**Description:** Component**Parameter:** version**Type:** string**Description:** Version**Parameter:** state**Type:** enum**Description:** Result**Parameter:** progress**Type:** float**Description:** Progress**Parameter:** result**Type:** string**Description:** Result**Parameter:** size**Type:** unsigned integer

Description: Size

Parameter: date

Type: string

Description: Date

Parameter: timestamp

Type: timestamp

Description: Epoch timestamp, parsed version of date

5.2.170 FPGAInfo:Entity

parent: Entity

Parameter: vendor

Type: string

Description: none

Parameter: bdf

Type: string

Description: none

Parameter: cardType

Type: string

Description: none

Parameter: flashType

Type: string

Description: none

Parameter: dsaRunningFPGA

Type: string

Description: none

Parameter: dsaPackageInstalled

Type: string

Description: none

Parameter: name

Type: string

Description: none

Parameter: rev

Type: string

Description: none

Parameter: serial

Type: string

Description: *none*

Parameter: `configMode`

Type: `string`

Description: *none*

Parameter: `fanPresence`

Type: `string`

Description: *none*

Parameter: `maxPowerLevel`

Type: `string`

Description: *none*

Parameter: `mac0`

Type: `MAC`

Description: *none*

Parameter: `mac1`

Type: `MAC`

Description: *none*

Parameter: `mac2`

Type: `MAC`

Description: *none*

Parameter: `mac3`

Type: `MAC`

Description: *none*

5.2.171 `FSExport:Entity`

parent: `Entity`

Parameter: `name`

Type: `string`

Description: Normally the same as the path, useful when exporting a path twice

Parameter: `path`

Type: `string`

Description: Path to export

Parameter: `network`

Type: reference to `Network` or `None`

Description: Network the interface is connected to

Parameter: `hosts`

Type: `string`

Description: Specify extra hosts-range allowed access to this export (space separated)

Parameter: `automatic`

Type: `boolean`

Description: The export was created automatically

Parameter: `allowWrite`

Type: `boolean`

Description: Allow writing

Parameter: `async`

Type: `boolean`

Description: Allow the NFS server to violate the NFS protocol and reply to requests before any changes made by that request have been committed to stable storage

Parameter: `rootSquash`

Type: `boolean`

Description: Map requests from uid/gid 0 to the anonymous uid/gid

Parameter: `allSquash`

Type: `boolean`

Description: Map all uids and gids to the anonymous user

Parameter: `anonUid`

Type: `unsigned integer`

Description: Anonymous account user id number

Parameter: `anonGid`

Type: `unsigned integer`

Description: Anonymous account group id number

Parameter: `extraOptions`

Type: `string`

Description: Extra options to be added to this export

Parameter: `fsid`

Type: `unsigned integer`

Description: Identification for exports used in failover setup. Make sure these are identical

Parameter: `rdma`

Type: `boolean`

Description: Enable NFS over RDMA

Parameter: `disabled`

Type: `boolean`

Description: Disable the export

Parameter: `checkTree`

Type: `boolean`

Description: Check tree

5.2.172 `FSMount:Entity`

parent: `Entity`

Parameter: `device`

Type: `string`

Description: What to mount.

Parameter: `mountpoint`

Type: `string`

Description: Where to mount.

Parameter: `filesystem`

Type: `string`

Description: The file system type.

Parameter: `mountoptions`

Type: `string`

Description: What options to use for mounting.

Parameter: `dump`

Type: `boolean`

Description: Dump field in fstab, see man fstab.

Parameter: `fsck`

Type: `enum`

Description: Filesystem check field in fstab, see man fstab.

Parameter: `rdma`

Type: `boolean`

Description: Enable NFS over RDMA.

5.2.173 `FSPart:Entity`

parent: `Entity`

Parameter: `path`

Type: `string`

Description: Full source path of the filesystem part

Parameter: `type`

Type: `enum`

Description: The type of filesystem part

Parameter: `watchDirectories`

Type: list of strings

Description: Watch directories for changes on the active head node, filesystem part will be marked dirty when changed

Parameter: `dirtyAutoSyncDelay`

Type: unsigned integer

Description: Time to wait before automatically syncing after the filesystem part became dirty, set 0 to disable

Parameter: `autoDirtyDelay`

Type: unsigned integer

Description: Time to wait before automatically marking an filesystem part as dirty, set 0 to disable

Parameter: `preSyncScript`

Type: string

Description: Script to be executed before rsync runs

Parameter: `postSyncScript`

Type: string

Description: Script to be executed after rsync runs

Parameter: `abortOnPreSyncScriptFailure`

Type: boolean

Description: Do not rsync if the pre sync script exited with a non zero exit code

Parameter: `runPostOnFailure`

Type: boolean

Description: Run the post rsync script even if the pre sync or sync ended with a non zero exit code

Parameter: `syncScriptTimeout`

Type: unsigned integer

Description: Script timeout

Parameter: `rsyncAcls`

Type: boolean

Description: Rsync with `-acls`

Parameter: `rsyncXattrs`

Type: boolean

Description: Rsync with `-xattrs`

Parameter: `rsyncHardlinks`

Type: boolean

Description: Rsync with `-hard-links`

Parameter: `rsyncSparse`

Type: boolean

Description: Rsync with `--sparse`

Parameter: `rsyncNumericIds`

Type: boolean

Description: Rsync with `--numeric-ids`

Parameter: `rsyncForce`

Type: boolean

Description: Rsync with `--force`

Parameter: `rsyncPrune`

Type: boolean

Description: Rsync with `--prune-empty-dirs`

Parameter: `rsyncDelta`

Type: boolean

Description: Rsync with `--inplace --no-whole-file`

Parameter: `rsyncBlockSize`

Type: unsigned integer

Description: Rsync with `--block-size=<value>` Max 128KB, 0 implies rsync default

Parameter: `rsyncBandWidthLimit`

Type: unsigned integer

Description: Rsync with `--bwlimit=<value>`

Parameter: `rsyncCompress`

Type: enum

Description: Rsync with `--compress`

Parameter: `rsyncCompressLevel`

Type: enum

Description: Rsync compression at a specific level

Parameter: `extraRsyncArguments`

Type: list of strings

Description: Extra rsync arguments. These can be made condition based on `type=no-new-files | normal` and `mode=sync | update | full | sync`. For example: `--max-delete=0?type=normal&mode=update | sync`

Parameter: `excludeListSnippets`

Type: list of `ExcludeListSnippet`

Description: *none*

5.2.174 `FSPartAssociation`: Entity

parent: Entity

Parameter: `node`

Type: reference to Node

Description: Node this association is associated with.

Parameter: `syncPoint`

Type: `string`

Description: Directory the FSPart should be synchronized to on the target.

Parameter: `prefix`

Type: `string`

Description: Optional prefix to the sync point

Parameter: `fspart`

Type: reference to FSPart

Description: FSPart this association is associated with.

Parameter: `disabled`

Type: `boolean`

Description: Disabled

Parameter: `enableInHA`

Type: `boolean`

Description: Enable in HA

Parameter: `onSharedStorage`

Type: `boolean`

Description: FSPart associations on shared storage can be used as provisioning source, but don't need to be kept up-to-date.

Parameter: `backupDirectory`

Type: `string`

Description: Backup directory

5.2.175 FSPartBasicAssociation: FSPartAssociation

parent: FSPartAssociation

Parameter: `isRoot`

Type: `boolean`

Description: Indicates if this association is the root file system for the target. A node can only have one association where this is set.

5.2.176 FSPartInfo: Entity

parent: Entity

Parameter: `ref_fspart_uuid`

Type: `UUID`

Description: FSPart

Parameter: `ref_node_uuid`

Type: `UUID`

Description: Node

Parameter: archOSInfo

Type: ArchOSInfo or None

Description: Detected arch/OS

Parameter: size

Type: unsigned integer

Description: Total size

Parameter: inotifyWatcherSize

Type: unsigned integer

Description: Inotify watcher size

5.2.177 FSPartProviderAssociation: FSPartAssociation

parent: FSPartAssociation

Parameter: onlyWhenActive

Type: boolean

Description: Only use provider association if the node is the active head node

5.2.178 FSPartRole: Role

parent: Role

Parameter: fsparts

Type: list of references to FSPart

Description: FSParts

Parameter: fspartSource

Type: boolean

Description: Server as source for all these FSParts

5.2.179 FSxInstance: Entity

parent: Entity

Parameter: fsxId

Type: string

Description: AWS assigned unique identifier

Parameter: name

Type: string

Description: Non-unique identifier

Parameter: owner

Type: string

Description: Owner of the FSx instance

Parameter: sharedWith

Type: list of strings

Description: Other cmjob users that can use this instance for jobs.

Parameter: vpcId

Type: string

Description: The VPC in which it exists

Parameter: region

Type: string

Description: The AWS region where the instance was created

Parameter: capacity

Type: unsigned integer

Description: Instance capacity. Should be at least 3600 GiB.

Parameter: status

Type: string

Description: AWS reported status of the instance

Parameter: hostname

Type: string

Description: Hostname of the FSx, is internal to the VPC

Parameter: management

Type: enum

Description: Instance management type

Parameter: creationTime

Type: string

Description: Creation time

5.2.180 GenericDevice: Device

parent: Device

Parameter: ip

Type: IP

Description: Ip address

Parameter: network

Type: reference to Network or None

Description: Network to which this switch is connected

Parameter: model

Type: string

Description: Device model name

Parameter: additionalHostnames

Type: list of strings

Description: List of additional hostnames that should resolve to the interfaces IP address

5.2.181 `GenericResource: BasicResource`

parent: BasicResource

Parameter: activateScript

Type: string

Description: Script to be executed when the resource is given to a node

Parameter: deactivateScript

Type: string

Description: Script to be executed when the resource is taken a way from a node

Parameter: checkScript

Type: string

Description: Script to be executed periodically to verify the resource is still running

Parameter: arguments

Type: list of strings

Description: Arguments to pass to the script

Parameter: scriptTimeout

Type: unsigned integer

Description: Script timeout

5.2.182 `GenericRole: Role`

parent: Role

Parameter: services

Type: list of strings

Description: Services managed by this role

Parameter: configuration

Type: list of GenericRoleConfiguration

Description: Configurations

Parameter: extraEnvironment

Type: list of GenericRoleEnvironment

Description: Additional environment to be passed to scripts

Parameter: excludeListSnippets

Type: list of ExcludeListSnippet

Description: none

Parameter: dataNode

Type: boolean

Description: If enabled the node will never do a FULL install without explicit user confirmation

5.2.183 GenericRoleConfiguration: Entity**parent:** Entity**Parameter:** name**Type:** string**Description:** Name**Parameter:** createDirectory**Type:** boolean**Description:** Create directory if it doesn't exist**Parameter:** filename**Type:** string**Description:** Filename**Parameter:** mask**Type:** unsigned integer**Description:** Filemask directory**Parameter:** userName**Type:** string**Description:** User ownership applied to the file**Parameter:** groupName**Type:** string**Description:** Group ownership applied to the file**Parameter:** disabled**Type:** boolean**Description:** Disabled**Parameter:** serviceActionOnWrite**Type:** enum**Description:** Action performed on service if the file changed**Parameter:** serviceStopOnFailure**Type:** boolean**Description:** Stop services if the file write failed**5.2.184 GenericRoleEnvironment: Entity****parent:** Entity**Parameter:** name**Type:** string**Description:** Name**Parameter:** value**Type:** string

Description: Value

Parameter: `nodeEnvironment`

Type: boolean

Description: Update the node environment variables

5.2.185 `GenericRoleGeneratedConfiguration: GenericRoleConfiguration`

parent: `GenericRoleConfiguration`

Parameter: `script`

Type: string

Description: Script

Parameter: `arguments`

Type: list of strings

Description: Arguments

Parameter: `timeout`

Type: unsigned integer

Description: Timeout

Parameter: `watch`

Type: boolean

Description: Watch script for for changes, and rerun

5.2.186 `GenericRoleStaticConfiguration: GenericRoleConfiguration`

parent: `GenericRoleConfiguration`

Parameter: `content`

Type: string

Description: Content to write into file

Parameter: `filemask`

Type: unsigned integer

Description: Filemask

5.2.187 `GenericRoleSymlinkConfiguration: GenericRoleConfiguration`

parent: `GenericRoleConfiguration`

Parameter: `sourceFilename`

Type: string

Description: Source filename

Parameter: `watch`

Type: boolean

Description: Watch source file for for changes, and treat as file change

5.2.188 `GenericRoleTemplatedConfiguration: GenericRoleConfiguration`**parent:** `GenericRoleConfiguration`**Parameter:** `templateContent`**Type:** `string`**Description:** `Template to use for writing file`**5.2.189** `GNSSLocation: Entity`**parent:** `Entity`**Parameter:** `ref_entity_uuid`**Type:** `UUID`**Description:** `Entity`**Parameter:** `timestamp`**Type:** `float`**Description:** `none`**Parameter:** `latitude`**Type:** `float`**Description:** `none`**Parameter:** `longitude`**Type:** `float`**Description:** `none`**Parameter:** `height`**Type:** `float`**Description:** `none`**Parameter:** `message`**Type:** `string`**Description:** `none`**5.2.190** `GPUInfo: Entity`**parent:** `Entity`**Parameter:** `name`**Type:** `string`**Description:** `none`**Parameter:** `brand`**Type:** `string`**Description:** `none`**Parameter:** `index`**Type:** `unsigned integer`

Description: *none*

Parameter: pciBusId

Type: string

Description: *none*

Parameter: pciDevId

Type: unsigned integer

Description: *none*

Parameter: pciSubSysId

Type: unsigned integer

Description: *none*

Parameter: serial

Type: string

Description: *none*

Parameter: vBios

Type: string

Description: *none*

Parameter: driver

Type: string

Description: *none*

Parameter: powerLimit

Type: unsigned integer

Description: *none*

Parameter: nvlinkUp

Type: unsigned integer

Description: *none*

Parameter: nvlinkDown

Type: unsigned integer

Description: *none*

Parameter: nvlinkSpeed

Type: unsigned integer

Description: *none*

5.2.191 GPUProfilinMetricInfo: Entity

parent: Entity

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: gpu

Type: unsigned integer

Description: GPU index

Parameter: majorId

Type: unsigned integer

Description: Major ID

Parameter: minorId

Type: unsigned integer

Description: Minor ID

Parameter: fieldId

Type: unsigned integer

Description: Field ID

Parameter: metric

Type: string

Description: Metric

Parameter: enabled

Type: boolean

Description: Enabled

5.2.192 GPUSettings: Entity

parent: Entity

Parameter: name

Type: string

Description: Range of GPUs for which these settings apply

5.2.193 GpuStatusEntry: Entity

parent: Entity

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: index

Type: unsigned integer

Description: GPU index for this status entry

Parameter: gpu

Type: string

Description: Name of the GPU

Parameter: `property`

Type: `string`

Description: Property name

Parameter: `value`

Type: `string`

Description: Value of the property

Parameter: `supported`

Type: list of strings

Description: List of supported values for this property

5.2.194 `GridEngineJob: Job`

parent: `Job`

5.2.195 `GridEngineJobQueue: JobQueue`

parent: `JobQueue`

Parameter: `tmpdir`

Type: `string`

Description: Temporary directory for queue

Parameter: `prolog`

Type: `string`

Description: Path to prolog script (e.g. `root@/cm/local/apps/cmd/scripts/prolog`)

Parameter: `epilog`

Type: `string`

Description: Path to epilog script

Parameter: `starterMethod`

Type: `string`

Description: Script to be executed instead of shell to run the job

Parameter: `suspendMethod`

Type: `string`

Description: Grid Engine Suspend method

Parameter: `resumeMethod`

Type: `string`

Description: Grid Engine Resume method

Parameter: `terminateMethod`

Type: `string`

Description: Grid Engine Terminate method

Parameter: `minWalltime`

Type: `string`

Description: Minimum runtime for jobs in queue

Parameter: `maxWalltime`

Type: `string`

Description: Maximum runtime for jobs in queue

5.2.196 `GridEngineJobQueueStat: JobQueueStat`

parent: `JobQueueStat`

Parameter: `load`

Type: `float`

Description: Queue queue load

Parameter: `used`

Type: `unsigned integer`

Description: Used queue slots

Parameter: `available`

Type: `unsigned integer`

Description: Available queue slots

Parameter: `total`

Type: `unsigned integer`

Description: Total queue slots

Parameter: `resv`

Type: `unsigned integer`

Description: Reserved queue slots

5.2.197 `GridEngineParallelEnvironment: Entity`

parent: `Entity`

Parameter: `name`

Type: `string`

Description: The name of the parallel environment (to be used in the `qsub -pe` switch)

Parameter: `slots`

Type: `unsigned integer`

Description: The number of parallel processes being allowed to run in total under the PE concurrently

Parameter: `userLists`

Type: `list of strings`

Description: A list of user access list names

Parameter: `xUserLists`

Type: `list of strings`

Description: An exclude list of user access list names

Parameter: `startProcedureArguments`

Type: `string`

Description: The invocation command line of a start-up procedure

Parameter: `stopProcedureArguments`

Type: `string`

Description: The invocation command line of a shutdown procedure

Parameter: `allocationRule`

Type: `string`

Description: The allocation rule helps the scheduler to decide how to distribute parallel processes

Parameter: `controlSlaves`

Type: `boolean`

Description: Indicates if GE is the creator of the slave tasks via `sge_execd` and `sge_shepherd`

Parameter: `jobIsFirstTask`

Type: `boolean`

Description: A value of `true` indicates that the GE job script already contains one of the tasks

Parameter: `urgencySlots`

Type: `string`

Description: Specifies the method to be used by GE to assess the number of slots such jobs might finally get

Parameter: `accountingSummary`

Type: `boolean`

Description: Indicates if only a single accounting record (job summary) is written to the accounting file

Parameter: `perPeTaskProlog`

Type: `string`

Description: Prolog script that is started for each slave task

Parameter: `perPeTaskEpilog`

Type: `string`

Description: Epilog script that is started for each slave task

5.2.198 Group: Entity

parent: `Entity`

Parameter: `ID`

Type: `string`

Description: Group ID

Parameter: `name`

Type: `string`

Description: Group name

Parameter: members

Type: list of strings

Description: Users belonging to this group

5.2.199 GuiCephOsdPoolInfo: Entity

parent: Entity

Parameter: ref_ceph_osdpool_uuid

Type: UUID

Description: CephOSDPool

Parameter: name

Type: string

Description: Name

Parameter: sizeBytes

Type: unsigned integer

Description: size_bytes

Parameter: numObjects

Type: unsigned integer

Description: num_objects

Parameter: numObjectClones

Type: unsigned integer

Description: num_object_clones

Parameter: numObjectCopies

Type: unsigned integer

Description: num_object_copies

Parameter: numObjectsMissingOnPrimary

Type: unsigned integer

Description: num_objects_missing_on_primary

Parameter: numObjectsDegraded

Type: unsigned integer

Description: num_objects_degraded

Parameter: numObjectsUnfound

Type: unsigned integer

Description: num_objects_unfound

Parameter: readOps

Type: unsigned integer

Description: Number of reads

Parameter: readBytes

Type: unsigned integer

Description: Total read

Parameter: writeOps

Type: unsigned integer

Description: Number of writes

Parameter: writeBytes

Type: unsigned integer

Description: Total write

5.2.200 GuiCephOverview: Entity

parent: Entity

Parameter: refCeph_uuid

Type: UUID

Description: Ceph

Parameter: status

Type: string

Description: Status

Parameter: numPgs

Type: unsigned integer

Description: Number of placement groups

Parameter: numMons

Type: unsigned integer

Description: Number of monitors

Parameter: numOsds

Type: unsigned integer

Description: Total

Parameter: numUpOsds

Type: unsigned integer

Description: Up

Parameter: numInOsds

Type: unsigned integer

Description: In

Parameter: pgsBytesTotal

Type: unsigned integer

Description: PGS Bytes Total

Parameter: pgsBytesUsed

Type: unsigned integer

Description: PGS Bytes Used

Parameter: pgsBytesAvail

Type: unsigned integer

Description: PGS Bytes Avail

Parameter: pgsDataBytes

Type: unsigned integer

Description: Amount of actual data in placement groups

Parameter: pgsReadBytesSec

Type: unsigned integer

Description: Bytes read per second for placement groups

Parameter: pgsWriteBytesSec

Type: unsigned integer

Description: Bytes written per second for placement groups

Parameter: pgs

Type: list of GuiCephPgsInfo

Description: PGS

Parameter: osdpools

Type: list of GuiCephOsdPoolInfo

Description: Ceph OSD Pool Information

5.2.201 GuiCephPgsInfo: Entity

parent: Entity

Parameter: stateName

Type: string

Description: State name

Parameter: version

Type: string

Description: Version

Parameter: numPgs

Type: unsigned integer

Description: Num Pgs

Parameter: dataBytes

Type: unsigned integer

Description: Data Bytes

Parameter: usedBytes

Type: unsigned integer

Description: Used Bytes

Parameter: availBytes

Type: unsigned integer

Description: Avail Bytes

Parameter: totalBytes

Type: unsigned integer

Description: Total Bytes

5.2.202 GuiClusterOverview: Entity

parent: Entity

Parameter: ref_partition_uuid

Type: UUID

Description: Partition

Parameter: uptime

Type: unsigned integer

Description: Uptime of the active head node

Parameter: nodesUp

Type: unsigned integer

Description: Number of nodes that are listed as up

Parameter: nodesDown

Type: unsigned integer

Description: Number of nodes that are listed as down

Parameter: nodesClosed

Type: unsigned integer

Description: Number of nodes that are listed as closed

Parameter: nodesTotal

Type: unsigned integer

Description: Number of nodes

Parameter: liteNodesUp

Type: unsigned integer

Description: Number of lite nodes that are listed as up

Parameter: liteNodesDown

Type: unsigned integer

Description: Number of lite nodes that are listed as down

Parameter: liteNodesClosed

Type: unsigned integer

Description: Number of lite nodes that are listed as closed

Parameter: liteNodesTotal

Type: unsigned integer

Description: Number of lite nodes

Parameter: dpuNodesUp

Type: unsigned integer

Description: Number of DPU nodes that are listed as up

Parameter: dpuNodesDown

Type: unsigned integer

Description: Number of DPU nodes that are listed as down

Parameter: dpuNodesClosed

Type: unsigned integer

Description: Number of DPU nodes that are listed as closed

Parameter: dpuNodesTotal

Type: unsigned integer

Description: Number of DPU nodes

Parameter: unmanagedNodesUp

Type: unsigned integer

Description: Number of unmanaged nodes that are listed as up

Parameter: unmanagedNodesDown

Type: unsigned integer

Description: Number of unmanaged nodes that are listed as down

Parameter: unmanagedNodesClosed

Type: unsigned integer

Description: Number of unmanaged nodes that are listed as closed

Parameter: unmanagedNodesTotal

Type: unsigned integer

Description: Number of unmanaged nodes

Parameter: managedSwitchesUp

Type: unsigned integer

Description: Number of managed switches that are listed as up

Parameter: managedSwitchesDown

Type: unsigned integer

Description: Number of managed switches that are listed as down

Parameter: managedSwitchesClosed

Type: unsigned integer

Description: Number of managed switches that are listed as closed

Parameter: managedSwitchesTotal

Type: unsigned integer

Description: Number of managed switches

Parameter: devicesUp

Type: unsigned integer

Description: Number of non-node devices that are listed as up

Parameter: devicesDown

Type: unsigned integer

Description: Number of non-node devices that are listed as down

Parameter: devicesClosed

Type: unsigned integer

Description: Number of non-node devices that are listed as closed

Parameter: devicesTotal

Type: unsigned integer

Description: Number of non-node devices

Parameter: coresUp

Type: unsigned integer

Description: Sum of all cores for nodes which are up

Parameter: coresTotal

Type: unsigned integer

Description: Sum of all cores for nodes which are up at one time

Parameter: gpusUp

Type: unsigned integer

Description: Sum of all GPUs for nodes which are up

Parameter: gpusTotal

Type: unsigned integer

Description: Sum of all GPUs for nodes which are up at one time

Parameter: fpgasUp

Type: unsigned integer

Description: Sum of all FPGAs for nodes which are up

Parameter: fpgasTotal

Type: unsigned integer

Description: Sum of all FPGAs for nodes which are up at one time

Parameter: disks

Type: list of GuiDiskUsage

Description: Number of disks

Parameter: workload

Type: list of GuiWorkload

Description: Workload information

Parameter: usersLoggedIn

Type: unsigned integer

Description: Number of logged in users on the active head node

Parameter: usersLoggedOut

Type: unsigned integer

Description: Number of logged out users on the active head node

Parameter: usersTotal

Type: unsigned integer

Description: Number of users known to the active head node

Parameter: memoryUsed

Type: unsigned integer

Description: Sum of used memory over all nodes

Parameter: memoryUnused

Type: unsigned integer

Description: Sum of unused memory over all nodes

Parameter: memoryTotal

Type: unsigned integer

Description: Sum of total memory over all nodes

Parameter: swapUsed

Type: unsigned integer

Description: Sum of used swap memory over all nodes

Parameter: swapUnused

Type: unsigned integer

Description: Sum of unused swap memory over all nodes

Parameter: swapTotal

Type: unsigned integer

Description: Sum of total swap over all nodes

Parameter: usageUser

Type: float

Description: Average user cpu usage over all nodes

Parameter: usageSystem

Type: float

Description: Average system cpu usage over all nodes

Parameter: usageIdle

Type: float

Description: Average idle cpu usage over all nodes

Parameter: usageOther

Type: float

Description: Percentage of cpu time spend on other operations

Parameter: phaseLoad

Type: float

Description: Phase load accross all APCs

Parameter: occupationRate

Type: float

Description: Formula: Average{allnodes} (min(load, cores) / cores)

Parameter: freeRate

Type: float

Description: Formula: 1 - Average{allnodes} (min(load, cores) / cores)

5.2.203 GuiDiskUsage: Entity

parent: Entity

Parameter: ref_device_uuid

Type: UUID

Description: Device

Parameter: mountpoint

Type: string

Description: Mountpoint

Parameter: used

Type: unsigned integer

Description: Bytes in use on this device

Parameter: free

Type: unsigned integer

Description: Bytes free on this device

parent: BasicResource

Parameter: ip
Type: IP
Description: IP

Parameter: networkDeviceName
Type: string
Description: The network device name to start this IP on. Leave blank to automatically determine based on IP.

Parameter: alias
Type: string
Description: The network device name alias

Parameter: timeout
Type: unsigned integer
Description: Timeout

5.2.224 Job: Entity

parent: Entity

Parameter: ref_wlm_cluster_uuid
Type: UUID
Description: WlmCluster

Parameter: ref_jobqueue_uuid
Type: UUID
Description: Queue name

Parameter: jobID
Type: string
Description: Job identifier

Parameter: arrayID
Type: string
Description: Job array identifier

Parameter: taskID
Type: string
Description: Job array task identifier(s)

Parameter: accountingInfo

Type: free JSON object

Description: Accounting info

Parameter: `jobname`

Type: string

Description: Name of job

Parameter: `username`

Type: string

Description: Job owner name

Parameter: `status`

Type: string

Description: Current job status

Parameter: `project`

Type: string

Description: Project name

Parameter: `priority`

Type: string

Description: Job priority

Parameter: `inqueue`

Type: string

Description: Shows whether job has already been queued or not

Parameter: `nodes`

Type: list of strings

Description: Requested nodes

Parameter: `cgroup`

Type: string

Description: CGroup allocated for this job on all nodes

Parameter: `rundirectory`

Type: string

Description: Job work directory

Parameter: `executable`

Type: string

Description: File which is executed inside job script

Parameter: `arguments`

Type: string

Description: Arguments of executable file

Parameter: `stdinfile`

Type: `string`

Description: Standard input file

Parameter: `stdoutfile`

Type: `string`

Description: Standard output file

Parameter: `stderrfile`

Type: `string`

Description: Standard error file

Parameter: `submittime`

Type: `string`

Description: Job submission time

Parameter: `starttime`

Type: `string`

Description: Job start time (available when job is started)

Parameter: `endtime`

Type: `string`

Description: Job end time (available when job is finished or canceled)

Parameter: `mailOptions`

Type: `string`

Description: Mail oprions

Parameter: `mailList`

Type: `string`

Description: Mail addresses

Parameter: `mailNotify`

Type: `boolean`

Description: Shows whether mail notification is requested or not

Parameter: `maxWallClock`

Type: `string`

Description: Maximum available running time

Parameter: `runWallClock`

Type: `unsigned integer`

Description: Running time

Parameter: `numberOfProcesses`

Type: `unsigned integer`

Description: Number of processes

Parameter: `memoryUse`

Type: unsigned integer

Description: Memory usage

Parameter: `scriptFile`

Type: string

Description: Job script file

Parameter: `numberOfNodes`

Type: unsigned integer

Description: Number of nodes

Parameter: `usergroup`

Type: string

Description: Job user group

Parameter: `commandLineInterpreter`

Type: string

Description: Command line interpreter

Parameter: `dependencies`

Type: list of strings

Description: Job dependencies

Parameter: `parallelEnvironment`

Type: string

Description: Parallel environment

Parameter: `account`

Type: string

Description: Account name

Parameter: `resourceList`

Type: list of strings

Description: List of requested resources

Parameter: `modules`

Type: list of strings

Description: Environment modules loaded for the script

Parameter: `environmentVariables`

Type: list of strings

Description: Additional environment variables

Parameter: `debug`

Type: boolean

Description: Debug mode (used when new job is submitted via CMDaemon API)

Parameter: userdefined

Type: list of strings

Description: User defined parameters

Parameter: exitCode

Type: integer

Description: Exit code of job

Parameter: minMemPerNode

Type: unsigned integer

Description: Minimum memory per node requested

Parameter: comment

Type: string

Description: Comment set by workload manager

Parameter: placement

Type: string

Description: Jobs are placed on nodes according to their place statements (useful for PBS, see 'man pbs_resources')

Parameter: pendingReasons

Type: list of strings

Description: List of pending reasons

Parameter: requestedCPUs

Type: unsigned integer

Description: Requested CPUs

Parameter: requestedCPUCores

Type: unsigned integer

Description: Requested CPU cores

Parameter: requestedGPUs

Type: unsigned integer

Description: Requested GPUs per node

Parameter: requestedMemory

Type: unsigned integer

Description: Requested memory per node

Parameter: requestedSlots

Type: unsigned integer

Description: Requested slots

Parameter: `ref_extra_jobqueue_uuids`

Type: list of unsigned numbers

Description: Extra queues

5.2.225 JobInfo: Entity

parent: Entity

Parameter: `ref_wlm_cluster_uuid`

Type: UUID

Description: WlmCluster

Parameter: `ref_jobqueue_uuid`

Type: UUID

Description: Queue

Parameter: `jobId`

Type: string

Description: Job ID

Parameter: `jobName`

Type: string

Description: Job name

Parameter: `user`

Type: string

Description: User name

Parameter: `group`

Type: string

Description: User group name

Parameter: `account`

Type: string

Description: Job account

Parameter: `accountingInfo`

Type: free JSON object

Description: Accounting info

Parameter: `nodes`

Type: list of unsigned numbers

Description: List of job's nodes

Parameter: `ref_node_monitoring_uuids`

Type: list of unsigned numbers

Description: Reference to all nodes monitoring UUIDs

Parameter: `cgroup`

Type: `string`

Description: Relative cgroup path

Parameter: `submitTime`

Type: `timestamp`

Description: Job submit time

Parameter: `startTime`

Type: `timestamp`

Description: Job start time

Parameter: `endTime`

Type: `timestamp`

Description: Job end time

Parameter: `persistent`

Type: `boolean`

Description: Whether job is persistent in DB or not

Parameter: `exitCode`

Type: `integer`

Description: Jobscrip exit code

Parameter: `state`

Type: `string`

Description: Job status

Parameter: `requestedCPUs`

Type: `unsigned integer`

Description: Requested CPUs

Parameter: `requestedCPUCores`

Type: `unsigned integer`

Description: Requested CPU cores

Parameter: `requestedGPUs`

Type: `unsigned integer`

Description: Requested GPU per node

Parameter: `requestedMemory`

Type: `unsigned integer`

Description: Requested memory per node

Parameter: `requestedSlots`

Type: unsigned integer

Description: Requested slots

Parameter: monitoring

Type: boolean

Description: Whether job still has monitoring data

Parameter: comment

Type: string

Description: Comment

Parameter: rundirectory

Type: string

Description: Job work directory

Parameter: stdinfile

Type: string

Description: Standard input file

Parameter: stdoutfile

Type: string

Description: Standard output file

Parameter: stderrfile

Type: string

Description: Standard error file

5.2.226 JobInfoStatistics: Entity

parent: Entity

Parameter: ref_wlm_cluster_uuid

Type: UUID

Description: WlmCluster

Parameter: ref_jobqueue_uuid

Type: UUID

Description: Queue

Parameter: user

Type: string

Description: none

Parameter: group

Type: string

Description: none

Parameter: account

Type: string

Description: *none*

Parameter: accountingInfo

Type: free JSON object

Description: *none*

Parameter: intervalStart

Type: timestamp

Description: *none*

Parameter: intervalEnd

Type: timestamp

Description: *none*

Parameter: pending

Type: unsigned integer

Description: *none*

Parameter: running

Type: unsigned integer

Description: *none*

Parameter: finished

Type: unsigned integer

Description: *none*

Parameter: error

Type: unsigned integer

Description: *none*

Parameter: total

Type: unsigned integer

Description: *none*

Parameter: pendingTime

Type: unsigned integer

Description: *none*

Parameter: runningTime

Type: unsigned integer

Description: *none*

Parameter: finishedTime

Type: unsigned integer

Description: *none*

Parameter: errorTime

Type: unsigned integer

Description: *none*

Parameter: nodes

Type: unsigned integer

Description: *none*

Parameter: maxRunning

Type: unsigned integer

Description: *none*

5.2.227 JobQueue: Entity

parent: Entity

Parameter: name

Type: string

Description: Name of queue

Parameter: wlmCluster

Type: reference to WlmCluster

Description: WlmCluster to which this node belongs

Parameter: options

Type: list of strings

Description: Additional parameters that will be passed to the WLM queue configuration

5.2.228 JobQueuePlaceholder: Entity

parent: Entity

Parameter: queue

Type: string

Description: Name of queue

Parameter: baseNodeName

Type: string

Description: Placeholder node base name

Parameter: maxNodes

Type: unsigned integer

Description: Maximum number of nodes in queue

Parameter: templateNode

Type: reference to Node

Description: Node that will be used as a placeholder

5.2.229 JobQueueStat: Entity

parent: Entity

Parameter: name

Type: string

Description: Queue name

Parameter: running

Type: unsigned integer

Description: Running jobs

Parameter: queued

Type: unsigned integer

Description: Queued jobs

Parameter: maxRunning

Type: unsigned integer

Description: Maximum number of jobs that can run simultaneously

5.2.230 JupyterHubConfig: Entity

parent: Entity

Parameter: key

Type: string

Description: Configuration key

Parameter: value

Type: string

Description: The value for the given configuration key, needs to be literal (include quotes for strings)

5.2.231 JupyterHubRole: Role

parent: Role

Parameter: version

Type: string

Description: JupyterHub version

Parameter: port

Type: unsigned integer

Description: Port for proxy (JupyterHub.port)

Parameter: hubPort

Type: unsigned integer

Description: Port for hub (JupyterHub.hub_port)

Parameter: hubIp

Type: string

Description: The ip address or hostname for the Hub process to bind to (JupyterHub.hub_ip)

Parameter: proxyApiUrl

Type: string

Description: The URL which the hub uses to connect to the proxy's API (c.ConfigurableHTTPProxy.api_url)

Parameter: dataFilePath

Type: string

Description: The location of jupyterhub data files (JupyterHub.data_files_path)

Parameter: pamOpenSessions

Type: boolean

Description: Enable SSL communication with HTTPS (PAMAuthenticator.open_sessions)

Parameter: ca

Type: string

Description: Filename containing the PEM-encoded certificate used for the Certification authority (CA)

Parameter: cakey

Type: string

Description: Filename containing the corresponding PEM-encoded private key used for the Certification authority (CA)

Parameter: cert

Type: string

Description: Path to the ssl certificate file (JupyterHub.ssl_cert)

Parameter: key

Type: string

Description: Path to the ssl key file (JupyterHub.ssl_key)

Parameter: adminUsers

Type: list of strings

Description: User with administrator privileges (Authenticator.admin_users)

Parameter: userForService

Type: string

Description: User for running cm-jupyterhub service (defined as User in /usr/lib/systemd/system/cm-jupyterhub.service)

Parameter: trustedDomains

Type: list of strings

Description: Trusted domains to be included in JupyterHub certificates as Alt Subjects.

Parameter: configs

Type: list of JupyterHubConfig

Description: Configuration options JupyterHub

5.2.232 KernelModule: Entity

parent: Entity

Parameter: name

Type: string

Description: The name of the kernel module.

Parameter: parameters

Type: string

Description: Options to be passed to the module.

5.2.233 KeyValuePair: Entity

parent: Entity

Parameter: key

Type: string

Description: none

Parameter: value

Type: string

Description: none

Parameter: onlydaemon

Type: boolean

Description: none

Parameter: ispattern

Type: boolean

Description: none

Parameter: priority

Type: integer

Description: none

5.2.234 KeyValueSettings: Entity

parent: Entity

Parameter: keyValues

Type: list of strings

Description: List of key=value pairs

5.2.235 KubeApp: Entity

parent: Entity

Parameter: name

Type: string

Description: Object name

Parameter: format

Type: string

Description: Configuration format

Parameter: enabled

Type: boolean

Description: Enable this application

Parameter: config

Type: string

Description: Yaml or json configuration for the object

Parameter: extraEnvironment

Type: list of KubeAppEnvironment

Description: Additional variables for kubernetes apps or kubernetes nodes environment

Parameter: excludeListSnippets

Type: list of ExcludeListSnippet

Description: none

Parameter: state

Type: integer

Description: none

5.2.236 KubeAppEnvironment: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: value

Type: string

Description: Value

Parameter: nodesEnvironment

Type: boolean

Description: Add variable to the nodes environment

5.2.237 KubeAppGroup: Entity

parent: Entity

Parameter: name

Type: string

Description: Object name

Parameter: applications

Type: list of KubeApp

Description: Kubernetes applications managed by cmdaemon

Parameter: `enabled`

Type: `boolean`

Description: Enable this application group

5.2.238 KubeCluster: Entity

parent: `Entity`

Parameter: `name`

Type: `string`

Description: Name of the Kubernetes cluster

Parameter: `etcdCluster`

Type: reference to `EtcdCluster` or `None`

Description: The Etcd cluster instance

Parameter: `serviceNetwork`

Type: reference to `Network` or `None`

Description: Network where service cluster IPs will be assigned from (must not overlap with any IP ranges assigned to nodes for pods)

Parameter: `podNetwork`

Type: reference to `Network` or `None`

Description: Network where POD IPs will be assigned from

Parameter: `podNetworkNodeMask`

Type: `string`

Description: Pod Network mask size for node cidr in cluster.

Parameter: `internalNetwork`

Type: reference to `Network` or `None`

Description: Network to use to back the internal communications

Parameter: `kubeDnsIp`

Type: `IP`

Description: KubeDNS IP address

Parameter: `kubernetesApiServer`

Type: `string`

Description: Kubernetes API server address (format: `https://host:port`)

Parameter: `kubernetesApiServerProxyPort`

Type: `unsigned integer`

Description: Kubernetes API server proxy port

Parameter: `appGroups`

Type: list of `KubeAppGroup`

Description: Kubernetes applications managed by cmdaemon

Parameter: labelSets

Type: list of KubeLabelSet

Description: Labels managed by cmdaemon

Parameter: notes

Type: string

Description: Notes

Parameter: version

Type: string

Description: Kubernetes Cluster Version

Parameter: trustedDomains

Type: list of strings

Description: Trusted domains to be included in Kubernetes related certificates as Alt Subjects.

Parameter: moduleFileTemplate

Type: string

Description: Template for system module file

Parameter: kubeadm_init_file

Type: string

Description: Kubeadm init file YAML

Parameter: kubeadm_init_cert_key

Type: string

Description: Kubeadm CERT Key

Parameter: kubeadm_ca_cert

Type: string

Description: Kube CA Cert

Parameter: kubeadm_ca_key

Type: string

Description: Kube CA Key

Parameter: users

Type: list of KubeUser

Description: Kubernetes users

Parameter: external

Type: boolean

Description: External kubernetes cluster

Parameter: externalIngressServer

Type: string

Description: Kubernetes Ingress server address (format: https://host:port)

Parameter: externalPort

Type: unsigned integer

Description: External port, set to 0 to disable

Parameter: capiTemplate

Type: boolean

Description: CAPI template kubernetes cluster

Parameter: capiNamespace

Type: string

Description: Kubernetes CAPI namespace

Parameter: kubeCluster

Type: reference to KubeCluster or None

Description: The Kubernetes cluster instance managing this CAPI-deployed Kubernetes Cluster

Parameter: options

Type: free JSON object

Description: Options to configure flags for Kube components

5.2.239 KubeLabelSet: Entity

parent: Entity

Parameter: name

Type: string

Description: Object name

Parameter: labels

Type: list of strings

Description: Node labels

Parameter: nodes

Type: list of references to Node

Description: List of nodes belonging to this label set

Parameter: categories

Type: list of references to Category

Description: List of categories belonging to this label set

Parameter: overlays

Type: list of references to ConfigurationOverlay

Description: List of overlays belonging to this label set

5.2.240 KubeletRole: Role**parent:** Role**Parameter:** kubeCluster**Type:** reference to KubeCluster**Description:** The Kubernetes cluster instance (pointer)**Parameter:** controlPlane**Type:** boolean**Description:** Control plane node**Parameter:** worker**Type:** boolean**Description:** Worker node**Parameter:** containerRuntimeService**Type:** string**Description:** The container runtime systemd service**Parameter:** maxPods**Type:** unsigned integer**Description:** Number of Pods that can run on this node**Parameter:** options**Type:** free JSON object**Description:** Options to overrule flags for Kube components**5.2.241** KubeNodeLoad: Entity**parent:** Entity**Parameter:** ref_node_uuid**Type:** UUID**Description:** Node**Parameter:** cpu**Type:** float**Description:** CPU %**Parameter:** mem**Type:** float**Description:** Memory % of total capacity**Parameter:** pods**Type:** float**Description:** Pods % of maximum

5.2.242 KubePodController: Entity

parent: Entity

Parameter: name

Type: string

Description: Kubernetes pod controller name

Parameter: type

Type: string

Description: Kubernetes pod controller type

Parameter: kubeNamespace

Type: string

Description: Namespace name

Parameter: uid

Type: string

Description: Pod controller unique ID in Kubernetes

Parameter: startTime

Type: timestamp

Description: Pod controller start time

Parameter: creationTime

Type: timestamp

Description: Pod controller creation time

Parameter: resources

Type: list of strings

Description: List of requested (if pending) or allocated (if started) resources

Parameter: labels

Type: list of strings

Description: List of labels assigned to the controller object

Parameter: status

Type: string

Description: Current pod controller status

Parameter: reason

Type: string

Description: Pod controller status reason

Parameter: priority

Type: unsigned integer

Description: Workload priority

5.2.243 KubePodInfo: Entity**parent:** Entity**Parameter:** name**Type:** string**Description:** none**Parameter:** podNamespace**Type:** string**Description:** none**Parameter:** image**Type:** string**Description:** none**Parameter:** nodes**Type:** list of unsigned numbers**Description:** none**Parameter:** startTime**Type:** timestamp**Description:** none**Parameter:** labels**Type:** list of strings**Description:** none**Parameter:** status**Type:** string**Description:** none**Parameter:** reason**Type:** string**Description:** none**Parameter:** message**Type:** string**Description:** none**Parameter:** ip**Type:** IP**Description:** none**Parameter:** replicaSets**Type:** list of strings**Description:** none

Parameter: `ready`

Type: `boolean`

Description: *none*

Parameter: `volumes`

Type: `list of strings`

Description: *none*

Parameter: `containers`

Type: `list of ContainerInfo`

Description: *none*

Parameter: `creationTime`

Type: `timestamp`

Description: *none*

Parameter: `controllerId`

Type: `string`

Description: *none*

Parameter: `resources`

Type: `list of strings`

Description: List of requested (if pending) or allocated (if started) resources

5.2.244 `KubernetesApiServerProxyRole: BaseNginxRole`

parent: `BaseNginxRole`

Parameter: `kubeClusters`

Type: `list of references to KubeCluster`

Description: The Kubernetes cluster instances (pointers)

5.2.245 `KubeUser: Entity`

parent: `Entity`

Parameter: `userName`

Type: `string`

Description: User name (not user ID)

Parameter: `manageKubeConfig`

Type: `boolean`

Description: Write a kubeconfig file for this user

Parameter: `initialDefaultNamespace`

Type: `string`

Description: namespace to make default when creating kubeconfig

5.2.246 LabeledEntity: Entity**parent:** Entity**Parameter:** name**Type:** string**Description:** Name**Parameter:** introductionTime**Type:** timestamp**Description:** Introduction time**Parameter:** lastUsedTime**Type:** timestamp**Description:** Time entity was last used**Parameter:** permanent**Type:** boolean**Description:** Do not allow automatic deletion**5.2.247** LdapServerRole: Role**parent:** Role**Parameter:** nodegroups**Type:** list of references to NodeGroup**Description:** List of node groups which can boot from this node**Parameter:** categories**Type:** list of references to Category**Description:** List of categories which can boot from this node**Parameter:** racks**Type:** list of references to Rack**Description:** List of racks which can boot from this node**5.2.248** LicenseInfo: Entity**parent:** Entity**Parameter:** ref_partition_uuid**Type:** UUID**Description:** Partition**Parameter:** macAddress**Type:** string**Description:** MAC address linked to the license**Parameter:** licensedNodes**Type:** unsigned integer

Description: Number of pre-paid nodes

Parameter: `licensedBurstNodes`

Type: integer

Description: Number of ondemand nodes

Parameter: `version`

Type: string

Description: Version

Parameter: `edition`

Type: string

Description: Edition

Parameter: `startTime`

Type: timestamp

Description: Time from which the license is active

Parameter: `endTime`

Type: timestamp

Description: Time at which the license stops being valid

Parameter: `serial`

Type: integer

Description: Serial

Parameter: `licensee`

Type: string

Description: Licensee

Parameter: `nodeCount`

Type: unsigned integer

Description: Nodes count with a MAC / cloud-identifier set

Parameter: `burstNodeCount`

Type: unsigned integer

Description: Burst nodes count

Parameter: `accountingAndReporting`

Type: boolean

Description: Accounting and reporting enabled/disabled

Parameter: `edgeSites`

Type: boolean

Description: Edge sites enabled/disabled

Parameter: `message`

Type: string

Description: License count message

Parameter: licenseType

Type: string

Description: License type

Parameter: information

Type: free JSON object

Description: Information

5.2.249 LiteMonitoredEntity: Entity

parent: Entity

Parameter: name

Type: string

Description: none

Parameter: types

Type: list of strings

Description: none

Parameter: resources

Type: list of strings

Description: none

Parameter: disabled

Type: boolean

Description: none

5.2.250 LiteMonitoringMeasurable: Entity

parent: Entity

Parameter: producer

Type: UUID

Description: none

Parameter: name

Type: string

Description: none

Parameter: parameter

Type: string

Description: none

Parameter: kind

Type: string

Description: *none*

Parameter: disabled

Type: boolean

Description: *none*

Parameter: cumulative

Type: boolean

Description: *none*

5.2.251 LiteNode: Device

parent: Device

Parameter: ip

Type: IP

Description: Ip address

Parameter: network

Type: reference to Network or None

Description: Network to which this switch is connected

Parameter: additionalHostnames

Type: list of strings

Description: List of additional hostnames that should resolve to the interfaces IP address

Parameter: services

Type: list of OSServiceConfig

Description: Manage operating system services

5.2.252 LSFBBaseJob: Job

parent: Job

5.2.253 LSFBBaseJobQueue: JobQueue

parent: JobQueue

Parameter: administrators

Type: string

Description: List of queue administrators.

Parameter: corelimit

Type: unsigned integer

Description: The per-process core file size limit (in KB) for all of the processes belonging to a job from this queue.

Parameter: cpulimit

Type: string

Description: Maximum normalized CPU time and optionally, the default normalized CPU time allowed for all processes of a job running in this queue; value format: [default_limit] maximum_limit.

Parameter: `chkPnt`

Type: `string`

Description: Enables automatic checkpointing; value format: `dir [period]`, where `dir` is the directory where the checkpoint files are created (do not use environment variables); `period` is the checkpoint period in minutes.

Parameter: `datalimit`

Type: `unsigned integer`

Description: The per-process data segment size limit (in KB) for all of the processes belonging to a job from this queue.

Parameter: `description`

Type: `string`

Description: Description of the queue that will be displayed by `'bqueues -l'`

Parameter: `default_host_spec`

Type: `string`

Description: The default CPU time normalization host for the queue.

Parameter: `dispatch_window`

Type: `string`

Description: The time windows in which jobs from this queue are dispatched.

Parameter: `exclusive`

Type: `string`

Description: If `Y`, specifies an exclusive queue. Jobs submitted to an exclusive queue with `'bsub -x'` will only be dispatched to a host that has no other LSF jobs running.

Parameter: `filelimit`

Type: `unsigned integer`

Description: The per-process file size limit (in KB) for all of the processes belonging to a job from this queue.

Parameter: `hjob_limit`

Type: `unsigned integer`

Description: Maximum number of job slots that this queue can use on any host.

Parameter: `hosts`

Type: `string`

Description: A space-separated list of hosts, host groups, and host partitions on which jobs from this queue can be run.

Parameter: `ignore_deadline`

Type: `string`

Description: If `Y`, disables deadline constraint scheduling (starts all jobs regardless of deadline constraints).

Parameter: `interactive`

Type: string

Description: Causes the queue to reject interactive batch jobs (NO) or accept nothing but interactive batch jobs (ONLY). Interactive batch jobs are submitted via 'bsub -I'.

Parameter: job_accept_interval

Type: unsigned integer

Description: The number of dispatch turns to wait after dispatching a job to a host, before dispatching a second job to the same host.

Parameter: job_controls

Type: string

Description: Changes the behaviour of the SUSPEND, RESUME, and TERMINATE actions.

Parameter: pre_post_exec_user

Type: string

Description: Username for prolog and epilog execution.

Parameter: prolog

Type: string

Description: Path to prolog script (pre_exec).

Parameter: epilog

Type: string

Description: Path to epilog script (post_exec).

Parameter: hostProlog

Type: string

Description: Path to per host prolog script (host_pre_exec).

Parameter: hostEpilog

Type: string

Description: Path to per host epilog script (host_post_exec).

Parameter: job_starter

Type: string

Description: Creates a specific environment for submitted jobs prior to execution.

Parameter: load_index

Type: string

Description: Scheduling and suspending thresholds for the specified dynamic load index.

Parameter: memlimit

Type: string

Description: The per-process memory resident set size limit (in KB) for all of the processes belonging to a job from this queue. Format is '[default_limit] maximum_limit'.

Parameter: mig

Type: unsigned integer

Description: Enables automatic job migration and specifies the migration threshold, in minutes.

Parameter: new_job_sched_delay

Type: unsigned integer

Description: The maximum or minimum length of time that a new job waits before being dispatched; the behavior depends on whether the delay period specified is longer or shorter than a regular dispatch interval (MBD_SLEEP_TIME in lsb.params, 60 seconds by default).

Parameter: nice

Type: unsigned integer

Description: Adjusts the Unix scheduling priority at which jobs from this queue execute.

Parameter: pjob_limit

Type: unsigned integer

Description: The per-processor job slot limit for the queue.

Parameter: processlimit

Type: string

Description: Limits the number of concurrent processes that can be part of a job.

Parameter: proclimit

Type: string

Description: Limits the number of processors that can be allocated to the job.

Parameter: priority

Type: unsigned integer

Description: Queue priority.

Parameter: qjob_limit

Type: unsigned integer

Description: Job slot limit for the queue. Total number of job slots this queue can use.

Parameter: rerunnable

Type: string

Description: If yes, enables automatic job rerun (restart).

Parameter: require_exit_values

Type: string

Description: The exit codes that will cause the job to be requeued.

Parameter: res_req

Type: string

Description: Resource requirements used to determine eligible hosts.

Parameter: resume_cond

Type: string

Description: Use the select section of the resource requirement string to specify load thresholds. All other sections are ignored.

Parameter: `run_window`

Type: string

Description: Time period during which jobs in the queue are allowed to run.

Parameter: `runlimit`

Type: string

Description: The maximum run limit and optionally the default run limit. Value format: [default_limit] maximum_limit.

Parameter: `slot_reserve`

Type: unsigned integer

Description: Enables processor reservation and specifies the number of dispatch turns over which a parallel job can reserve job slots.

Parameter: `stacklimit`

Type: unsigned integer

Description: The per-process stack segment size limit (in KB) for all of the processes belonging to a job from this queue.

Parameter: `stop_cond`

Type: string

Description: Use the select section of the resource requirement string to specify load thresholds. All other sections are ignored.

Parameter: `swaplimit`

Type: unsigned integer

Description: The amount of total virtual memory limit (in KB) for a job from this queue.

Parameter: `terminate_when`

Type: string

Description: Configures the queue to invoke the TERMINATE action instead of the SUSPEND action in the specified circumstance.

Parameter: `ujob_limit`

Type: unsigned integer

Description: The per-user job slot limit for the queue. Maximum number of slots that each user can use in this queue.

Parameter: `users`

Type: string

Description: A list of users or user groups that can submit jobs to this queue. Use the reserved word all to specify all users.

Parameter: `r15s`

Type: string

Description: Built-in load index: run queue length (15 sec average).

Parameter: r1m

Type: string

Description: Built-in load index: run queue length (1 min average).

Parameter: r15m

Type: string

Description: Built-in load index: run queue length (15 min average).

Parameter: it

Type: string

Description: Built-in load index: idle time.

Parameter: io

Type: string

Description: Built-in load index: disk I/O.

Parameter: ut

Type: string

Description: Built-in load index: CPU utilization.

Parameter: mem

Type: string

Description: Built-in load index: available memory (in MB).

Parameter: pg

Type: string

Description: Built-in load index: pages in + pages out.

Parameter: tmp

Type: string

Description: Built-in load index: available space in temporary file system (MB).

Parameter: swp

Type: string

Description: Built-in load index: available swap space (in MB).

Parameter: ls

Type: string

Description: Built-in load index.

5.2.254 LSFBaseJobQueueStat: JobQueueStat

parent: JobQueueStat

Parameter: status

Type: string

Description: Queue status

Parameter: `priority`

Type: unsigned integer

Description: Queue priority

Parameter: `njobs`

Type: unsigned integer

Description: Number of all jobs in queue

Parameter: `suspended`

Type: unsigned integer

Description: Number of suspended jobs in queue

5.2.255 LSFGroupsSettings: WlmCgroupsSettings

parent: WlmCgroupsSettings

Parameter: `resourceEnforce`

Type: list of strings

Description: Controls resource enforcement through the Linux cgroup memory and cpuset subsystem on Linux systems with cgroup support (LSB_RESOURCE_ENFORCE)

Parameter: `processTracking`

Type: boolean

Description: Enable this parameter to track processes based on job control functions such as termination, suspension, resume and other signaling, on Linux systems which support cgroups freezer subsystem (LSF_PROCESS_TRACKING)

Parameter: `linuxCgroupAccounting`

Type: boolean

Description: Enable this parameter to track processes based on CPU and memory accounting for Linux systems that support cgroup's memory and cpuacct subsystems (LSF_LINUX_CGROUP_ACCT)

Parameter: `jobCgroupTemplate`

Type: string

Description: Template for job cgroup path (\$CLUSTER will be replaced to LSF cluster name, \$JOBID will be replaced to job id)

5.2.256 LSFClientRole: LSFRole

parent: LSFRole

Parameter: `slots`

Type: string

Description: Number of slots available on this node/category

Parameter: `queues`

Type: list of references to LSFJobQueue

Description: Queues this node/nodes in this category belongs to

Parameter: `allQueues`

Type: `boolean`

Description: When set, the role will provide all available queues (the `queues` property will then be ignored)

Parameter: `gpus`

Type: `unsigned integer`

Description: Number of gpus

Parameter: `gpuDevices`

Type: `list of strings`

Description: `/dev/*` available to workload management

Parameter: `server`

Type: `boolean`

Description: Is LSF server (can run jobs)

Parameter: `IMEX`

Type: `boolean`

Description: Start IMEX daemon from prolog/epilog

Parameter: `hostModel`

Type: `string`

Description: Host model (possible values are defined in `lsf.shared`)

Parameter: `hostType`

Type: `string`

Description: Host type (possible values are defined in `lsf.shared`)

Parameter: `nodeCustomizations`

Type: `list of WlmNodeCustomizationEntry`

Description: LSF node custom properties

5.2.257 LSFJob: LSFBaseJob

parent: LSFBaseJob

5.2.258 LSFJobQueue: LSFBaseJobQueue

parent: LSFBaseJobQueue

Parameter: `fairshare`

Type: `string`

Description: Fairshare scheduling

Parameter: `backfill`

Type: `string`

Description: Backfill scheduling

Parameter: `preemption`

Type: string

Description: Preemption scheduling

Parameter: defaultQueue

Type: boolean

Description: Specifies the queue which is to accept jobs when no queue is requested

5.2.259 LSFJobQueueStat: LSFBaseJobQueueStat

parent: LSFBaseJobQueueStat

5.2.260 LSFRole: Role

parent: Role

Parameter: wlmCluster

Type: reference to LSFWlmCluster

Description: WLM cluster link to this WLM role

5.2.261 LSFServerRole: LSFRole

parent: LSFRole

Parameter: externalServer

Type: boolean

Description: LSF server daemons are running on some external machine

5.2.262 LSFSubmitRole: WlmSubmitRole

parent: WlmSubmitRole

Parameter: lsfWlmClusters

Type: list of references to LSFWlmCluster

Description: List of LSF clusters which the role belongs to

Parameter: hostType

Type: string

Description: Host type (possible values are defined in lsf.shared)

5.2.263 LSFWlmCluster: WlmCluster

parent: WlmCluster

Parameter: version

Type: string

Description: Major LSF version

Parameter: prefix

Type: string

Description: LSF installation directory

Parameter: var

Type: string

Description: Var directory location

Parameter: `localVar`

Type: `string`

Description: Local var directory location

Parameter: `logDir`

Type: `string`

Description: Logging directory location (LSF_LOGDIR in lsf.conf)

Parameter: `dynamicCloudNodes`

Type: `boolean`

Description: Cloud nodes are added dynamically to LSF

Parameter: `placeholders`

Type: list of `JobQueuePlaceholder`

Description: Job queue node placeholders mode

Parameter: `cgroups`

Type: `LSFCgroupsSettings`

Description: Submode containing LSF related cgroups settings

Parameter: `doBackups`

Type: `boolean`

Description: Backup configuration file before update

Parameter: `gpuAutoconfig`

Type: `boolean`

Description: Enable GPU autodetection (LSF_GPU_AUTOCONFIG in lsf.conf)

Parameter: `gpuNewSyntax`

Type: `boolean`

Description: Enable new GPU request syntax (LSF_GPU_NEW_SYNTAX in lsf.conf)

Parameter: `dcgmPort`

Type: `unsigned integer`

Description: Enable DCGM features and specifies the port number that LSF uses to communicate with the DCGM daemon (0 for disabled)

Parameter: `unitForLimits`

Type: `string`

Description: Enables scaling of large units in the resource usage limits (LSF_UNIT_FOR_LIMITS in lsf.conf)

Parameter: `noQueueHostsString`

Type: `string`

Description: String that is used to replace empty nodes list for a queue

Parameter: `enableEgo`

Type: boolean

Description: Enable EGO functionality (LSF_ENABLE_EGO in lsf.conf)

Parameter: dynamicHostWaitTime

Type: unsigned integer

Description: Defines the length of time in seconds that a dynamic host awaits communicating with the master host LIM to either add the host to the cluster or to shut down any running daemons if the host is not added successfully. Note that the time will be truncated to the minute (LSF_DYNAMIC_HOST_WAIT_TIME in lsf.conf)

Parameter: hostAddressRange

Type: string

Description: Identifies the range of IP addresses that are allowed to be LSF hosts that can be dynamically added to or removed from the cluster (LSF_HOST_ADDR_RANGE in lsf.conf)

Parameter: manageMIG

Type: boolean

Description: enable dynamic MIG scheduling (LSF_MANAGE_MIG in lsf.conf)

5.2.264 MemoryInfo: Entity

parent: Entity

Parameter: IDs

Type: list of strings

Description: IDs

Parameter: locations

Type: list of strings

Description: Location

Parameter: speed

Type: unsigned integer

Description: Speed

Parameter: size

Type: unsigned integer

Description: Size

Parameter: description

Type: string

Description: Description

5.2.265 MIGInformation: Entity

parent: Entity

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: gpuId
Type: unsigned integer
Description: The hardware GPU identifier

Parameter: name
Type: string
Description: *none*

Parameter: profileId
Type: unsigned integer
Description: *none*

Parameter: instanceId
Type: unsigned integer
Description: *none*

Parameter: placementStart
Type: unsigned integer
Description: *none*

Parameter: placementSize
Type: unsigned integer
Description: *none*

Parameter: memory
Type: unsigned integer
Description: *none*

Parameter: P2P
Type: boolean
Description: *none*

Parameter: SM
Type: unsigned integer
Description: *none*

Parameter: CE
Type: unsigned integer
Description: *none*

Parameter: DEC
Type: unsigned integer
Description: *none*

Parameter: JPEG
Type: unsigned integer

Description: *none*

Parameter: ENC

Type: unsigned integer

Description: *none*

Parameter: OFA

Type: unsigned integer

Description: *none*

5.2.266 MonitoringAction: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: runOn

Type: enum

Description: Run the action on

Parameter: allowedTime

Type: string

Description: Sets time interval during which action is allowed to be executed

Parameter: disable

Type: boolean

Description: Disable

Parameter: suppressedByGoingDown

Type: boolean

Description: Suppress running action if device is going down

5.2.267 MonitoringActionRunData: Entity

parent: Entity

Parameter: target

Type: UUID

Description: Target node

Parameter: info

Type: string

Description: Extra information

Parameter: env

Type: list of strings

Description: Environment

5.2.268 `MonitoringCacheSubSystemInfo: Entity`**parent:** Entity**Parameter:** name**Type:** string**Description:** Name**Parameter:** queued**Type:** unsigned integer**Description:** Number of samples ready for delivery**Parameter:** pickup**Type:** unsigned integer**Description:** Number of times data has been picked up**Parameter:** delivered**Type:** unsigned integer**Description:** Number of samples delivered the last pick up**Parameter:** handled**Type:** unsigned integer**Description:** Total number of samples handled**5.2.269** `MonitoringCategoryListExecutionFilter: MonitoringExecutionFilter`**parent:** MonitoringExecutionFilter**Parameter:** categories**Type:** list of references to Category**Description:** List of categories belonging to this group**5.2.270** `MonitoringCategoryListExecutionMultiplexer:
MonitoringExecutionMultiplexer`**parent:** MonitoringExecutionMultiplexer**Parameter:** categories**Type:** list of references to Category**Description:** List of categories belonging to this group**5.2.271** `MonitoringCompareExpression: MonitoringExpression`**parent:** MonitoringExpression**Parameter:** entities**Type:** string**Description:** Entities matching the regex, leave empty for all**Parameter:** measurables**Type:** string**Description:** Measurables matching the regex, leave empty for all

Parameter: parameters

Type: string

Description: Parameters matching the regex, leave empty for all

Parameter: op

Type: enum

Description: Operator

Parameter: grouping

Type: enum

Description: Method to group all matching entity measurable parameter

Parameter: value

Type: string

Description: Value

Parameter: useRaw

Type: boolean

Description: Use raw data instead of rate for cumulative metrics

Parameter: code

Type: string

Description: Lua code

5.2.272 MonitoringConsolidator: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: disabled

Type: boolean

Description: Disable, consolidator for all entities. Do not throw away existing data.

Parameter: consolidators

Type: list of Consolidator

Description: Consolidators

5.2.273 MonitoringDataCacheSubSystemInfo: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: size

Type: unsigned integer

Description: First plot request

Parameter: updates

Type: unsigned integer

Description: Last plot request

Parameter: requests

Type: unsigned integer

Description: Number of plot requests

5.2.274 MonitoringDataProducer: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: description

Type: string

Description: Description

Parameter: notes

Type: string

Description: Administrator notes

Parameter: when

Type: enum

Description: When the producer should run

Parameter: maxAge

Type: float

Description: Maximal age of historic data, 0 for infinite

Parameter: maxSamples

Type: unsigned integer

Description: Maximal samples of historic data, 0 for infinite

Parameter: interval

Type: float

Description: Sampling interval

Parameter: offset

Type: float

Description: Time offset for sampling interval

Parameter: startupDelay

Type: float

Description: Delay the first sampling the specified time after cmd starts

Parameter: `intervals`

Type: list of floating point numbers

Description: Out of band sampling interval

Parameter: `gap`

Type: unsigned integer

Description: Number of missed samples before we add a NaN

Parameter: `fuzzyOffset`

Type: float

Description: Automatic fuzzy offset factor [0-1]. Multiplied by interval

Parameter: `introduceNaN`

Type: boolean

Description: Introduce NaN if device goes up/down/up

Parameter: `automaticReinitialize`

Type: boolean

Description: Automatic run –initialize when a new metric has been detected

Parameter: `disabled`

Type: boolean

Description: Disabled

Parameter: `disableTriggers`

Type: boolean

Description: Disable triggers from being evaluated

Parameter: `disableOnHighLoad`

Type: boolean

Description: Disable when nodes are very busy

Parameter: `nodeExecutionFilters`

Type: list of `MonitoringExecutionFilter`

Description: Filter nodes which should run this data producer. If none are specified: execute on each node.

Parameter: `executionMultiplexers`

Type: list of `MonitoringExecutionMultiplexer`

Description: Execute the producer once for each entity which matches one of the criteria. If none are specified: only execute it for the node itself.

Parameter: `consolidator`

Type: reference to `MonitoringConsolidator` or None

Description: Consolidator configuration

Parameter: `suppressedByGoingDown`

Type: `boolean`

Description: Suppress running action if device is going down

Parameter: `access`

Type: `enum`

Description: User access control

Parameter: `associatedUser`

Type: `string`

Description: User associated with this measurable

5.2.275 `MonitoringDataProducerAggregateNode:MonitoringDataProducerInternal`

parent: `MonitoringDataProducerInternal`

Parameter: `maxSampleAge`

Type: `float`

Description: Maximal age of node sample to contribute

Parameter: `excludeNodes`

Type: list of references to `Node`

Description: List of nodes to exclude from the total

Parameter: `excludeCategories`

Type: list of references to `Category`

Description: List of node groups to exclude from the total

Parameter: `excludeNodeGroups`

Type: list of references to `NodeGroup`

Description: List of node groups to exclude from the total

5.2.276 `MonitoringDataProducerAggregatePDU:MonitoringDataProducerInternal`

parent: `MonitoringDataProducerInternal`

Parameter: `maxSampleAge`

Type: `float`

Description: Maximal age of node sample to contribute

Parameter: `excludePDUs`

Type: list of references to `PowerDistributionUnit`

Description: List of PDUs to exclude from the total

5.2.277 `MonitoringDataProducerAlertLevel: MonitoringDataProducerInternal`**parent:** MonitoringDataProducerInternal**5.2.278** `MonitoringDataProducerClusterTotal: MonitoringDataProducerInternal`**parent:** MonitoringDataProducerInternal**5.2.279** `MonitoringDataProducerCMDaemonState: MonitoringDataProducerInternal`**parent:** MonitoringDataProducerInternal**Parameter:** `subsystems`**Type:** list of strings**Description:** Subsystems**5.2.280** `MonitoringDataProducerDeviceState: MonitoringDataProducerInternal`**parent:** MonitoringDataProducerInternal**5.2.281** `MonitoringDataProducerDPU: MonitoringDataProducer`**parent:** MonitoringDataProducer**Parameter:** `dpuSettings`**Type:** MonitoringDataProducerDPUSettings**Description:** Submode containing DPU settings**5.2.282** `MonitoringDataProducerDPUSettings: Entity`**parent:** Entity**Parameter:** `enable_pcie0`**Type:** boolean**Description:** Enable pcie0 metrics**Parameter:** `enable_pcie1`**Type:** boolean**Description:** Enable pcie0 metrics**Parameter:** `enable_ecc`**Type:** boolean**Description:** Enable ecc metrics**Parameter:** `configured_events`**Type:** list of MonitoringDataProducerDPUSettingsEvent**Description:** Configured of the event**5.2.283** `MonitoringDataProducerDPUSettingsEvent: Entity`**parent:** Entity**Parameter:** `index`**Type:** unsigned integer**Description:** Index**Parameter:** `counter`

Type: unsigned integer

Description: Counter

5.2.284 `MonitoringDataProducerDPUSettingsEventGic:`
`MonitoringDataProducerDPUSettingsEvent`

parent: `MonitoringDataProducerDPUSettingsEvent`

Parameter: `event`

Type: enum

Description: Event value from the event list that will be sampled

5.2.285 `MonitoringDataProducerDPUSettingsEventL3CacheHalf:`
`MonitoringDataProducerDPUSettingsEvent`

parent: `MonitoringDataProducerDPUSettingsEvent`

Parameter: `event`

Type: enum

Description: Event value from the event list that will be sampled

5.2.286 `MonitoringDataProducerDPUSettingsEventSmmu:`
`MonitoringDataProducerDPUSettingsEvent`

parent: `MonitoringDataProducerDPUSettingsEvent`

Parameter: `event`

Type: enum

Description: Event value from the event list that will be sampled

5.2.287 `MonitoringDataProducerDPUSettingsEventTile:`
`MonitoringDataProducerDPUSettingsEvent`

parent: `MonitoringDataProducerDPUSettingsEvent`

Parameter: `event`

Type: enum

Description: Event value from the event list that will be sampled

5.2.288 `MonitoringDataProducerDPUSettingsEventTilenet:`
`MonitoringDataProducerDPUSettingsEvent`

parent: `MonitoringDataProducerDPUSettingsEvent`

Parameter: `event`

Type: enum

Description: Event value from the event list that will be sampled

5.2.289 `MonitoringDataProducerDPUSettingsEventTrio:`
`MonitoringDataProducerDPUSettingsEvent`

parent: `MonitoringDataProducerDPUSettingsEvent`

Parameter: `event`

Type: enum

Description: Event value from the event list that will be sampled

5.2.290 MonitoringDataProducerDPUSettingsEventTriogen: MonitoringDataProducerDPUSettingsEvent

parent: MonitoringDataProducerDPUSettingsEvent

Parameter: event

Type: enum

Description: Event value from the event list that will be sampled

5.2.291 MonitoringDataProducerEC2SpotPrices: MonitoringDataProducerInternal

parent: MonitoringDataProducerInternal

Parameter: regions

Type: enum

Description: Regions to collect data for

Parameter: customRegions

Type: list of references to EC2Region

Description: Custom list of regions to collect data from

Parameter: types

Type: enum

Description: Types to collect data for

Parameter: customTypes

Type: list of references to EC2Type

Description: Custom list of types to collect data from

5.2.292 MonitoringDataProducerFabricTotal: MonitoringDataProducerInternal

parent: MonitoringDataProducerInternal

5.2.293 MonitoringDataProducerGPU: MonitoringDataProducer

parent: MonitoringDataProducer

Parameter: updateFreq

Type: float

Description: Update frequency of the internal cuda metric sampler

5.2.294 MonitoringDataProducerInternal: MonitoringDataProducer

parent: MonitoringDataProducer

5.2.295 MonitoringDataProducerJob: MonitoringDataProducer

parent: MonitoringDataProducer

Parameter: allowPreAllocate

Type: boolean

Description: Allow pre-allocate of monitoring structures, speeds up for large number of jobs. Disable if measurables per node differ a lot

Parameter: metricSettings

Type: MonitoringJobMetricSettings

Description: Submode containing job metric settings

5.2.296 MonitoringDataProducerJobMetadata: MonitoringDataProducer

parent: MonitoringDataProducer

Parameter: allowPreAllocate

Type: boolean

Description: Allow pre-allocate of monitoring structures, speeds up for large number of jobs. Disable if measurables per node differ a lot

Parameter: excludeMetrics

Type: list of strings

Description: Exclude metrics by name from collection

Parameter: includeMetrics

Type: list of strings

Description: Only these metrics will be samples if the set is not empty

Parameter: excludeUsers

Type: list of strings

Description: Exclude usage data for the specified users

Parameter: includeUsers

Type: list of strings

Description: Only include usage data for the specified users

Parameter: excludeShell

Type: list of strings

Description: Exclude usage data for the specified shells

Parameter: minimalUserId

Type: unsigned integer

Description: Minimal user ID

Parameter: userCode

Type: string

Description: Lua code for calculation of extra metric per user

Parameter: storeLastChangeTimestamp

Type: boolean

Description: Add extra metric to store last change timestamp

5.2.297 MonitoringDataProducerJobQueue: MonitoringDataProducer

parent: MonitoringDataProducer

Parameter: wlmClusters

Type: list of references to WlmCluster

Description: List of wlm clusters for which to sample, empty for all

5.2.298 MonitoringDataProducerLua: MonitoringDataProducer

parent: MonitoringDataProducer

Parameter: code

Type: string

Description: Lua code

Parameter: timeout

Type: unsigned integer

Description: Lua timeout

5.2.299 MonitoringDataProducerMonitoringSystem: MonitoringDataProducerInternal

parent: MonitoringDataProducerInternal

5.2.300 MonitoringDataProducerPerpetual: MonitoringDataProducer

parent: MonitoringDataProducer

Parameter: script

Type: string

Description: Script

Parameter: runInBash

Type: boolean

Description: Run the script in a bash session

Parameter: arguments

Type: list of strings

Description: Additional arguments to pass to the script

Parameter: format

Type: enum

Description: Expected output format

Parameter: watch

Type: boolean

Description: Watch script for for changes, and restart

5.2.301 MonitoringDataProducerPowerDistributionUnit: MonitoringDataProducerInternal

parent: MonitoringDataProducerInternal

5.2.302 MonitoringDataProducerProcMemInfo: MonitoringDataProducerInternal

parent: MonitoringDataProducerInternal

5.2.303 MonitoringDataProducerProcMount: MonitoringDataProducerInternal

parent: MonitoringDataProducerInternal

Parameter: includeMedia

Type: boolean

Description: Include media mount points

Parameter: includeRemote

Type: boolean

Description: Include remote mount points

Parameter: includeDocker

Type: boolean

Description: Include docker mount points

Parameter: excludeMountPoints

Type: list of strings

Description: Exclude mount points

5.2.304 MonitoringDataProducerProcNetDev: MonitoringDataProducerInternal

parent: MonitoringDataProducerInternal

Parameter: excludeIf

Type: list of strings

Description: Exclude interfaces

Parameter: includeAll

Type: boolean

Description: Include all metrics

5.2.305 MonitoringDataProducerProcNetSnmp: MonitoringDataProducerInternal

parent: MonitoringDataProducerInternal

5.2.306 MonitoringDataProducerProcPidStat: MonitoringDataProducerInternal

parent: MonitoringDataProducerInternal

Parameter: pid

Type: unsigned integer

Description: PID to sample

Parameter: process

Type: string

Description: Process

5.2.307 MonitoringDataProducerProcStat: MonitoringDataProducerInternal

parent: MonitoringDataProducerInternal

Parameter: individualCPU

Type: boolean

Description: Measure individual CPUs

5.2.308 `MonitoringDataProducerProcVMStat: MonitoringDataProducerInternal`**parent:** `MonitoringDataProducerInternal`**5.2.309** `MonitoringDataProducerPrometheus: MonitoringDataProducer`**parent:** `MonitoringDataProducer`**Parameter:** `urls`**Type:** list of strings**Description:** One or more URLs to try connect to**Parameter:** `timeout`**Type:** unsigned integer**Description:** Http get timeout**Parameter:** `passEnvironment`**Type:** boolean**Description:** Pass the entity environment to the script**Parameter:** `username`**Type:** string**Description:** Username used in http call**Parameter:** `password`**Type:** string**Description:** Password used in http call**Parameter:** `https`**Type:** boolean**Description:** https**Parameter:** `caPath`**Type:** string**Description:** CA certificate path**Parameter:** `privateKeyPath`**Type:** string**Description:** Certificate path**Parameter:** `certificatePath`**Type:** string**Description:** Private key path**Parameter:** `staleTracking`**Type:** boolean**Description:** Enable automatic tracking of stale metrics**Parameter:** `withCertificate`**Type:** boolean

Description: Pass the cmdaemon certificate to make the call

Parameter: includeProducerJobName

Type: boolean

Description: Automatically include producer job name in Prometheus label

Parameter: includeEntityName

Type: boolean

Description: Automatically include entity name in Prometheus label

5.2.310 MonitoringDataProducerRackSensor: MonitoringDataProducerInternal

parent: MonitoringDataProducerInternal

5.2.311 MonitoringDataProducerRedFishSubscription: MonitoringDataProducerInternal

parent: MonitoringDataProducerInternal

5.2.312 MonitoringDataProducerScript: MonitoringDataProducer

parent: MonitoringDataProducer

Parameter: script

Type: string

Description: Script

Parameter: timeout

Type: unsigned integer

Description: Script timeout

Parameter: arguments

Type: list of strings

Description: Additional arguments to pass to the script

Parameter: format

Type: enum

Description: Expected output format

5.2.313 MonitoringDataProducerSingleLineHealthCheckScript: MonitoringDataProducerSingleLineScript

parent: MonitoringDataProducerSingleLineScript

5.2.314 MonitoringDataProducerSingleLineMetricScript: MonitoringDataProducerSingleLineScript

parent: MonitoringDataProducerSingleLineScript

Parameter: minimum

Type: float

Description: Minimum

Parameter: maximum

Type: float

Description: Maximum

Parameter: `cumulative`

Type: boolean

Description: Cumulative

Parameter: `unit`

Type: string

Description: Unit

5.2.315 `MonitoringDataProducerSingleLineScript`: `MonitoringDataProducer`

parent: `MonitoringDataProducer`

Parameter: `script`

Type: string

Description: Script

Parameter: `typeClass`

Type: string

Description: Type class, slash(/) separated for levels

Parameter: `timeout`

Type: unsigned integer

Description: Script timeout

Parameter: `arguments`

Type: list of strings

Description: Additional arguments to pass to the script

Parameter: `runInBash`

Type: boolean

Description: Run the script in a bash session

5.2.316 `MonitoringDataProducerSwitch`: `MonitoringDataProducerInternal`

parent: `MonitoringDataProducerInternal`

5.2.317 `MonitoringDataProducerSysBlockStat`: `MonitoringDataProducerInternal`

parent: `MonitoringDataProducerInternal`

Parameter: `excludeVirtualDisks`

Type: boolean

Description: Exclude virtual disks

Parameter: `excludeDisks`

Type: list of strings

Description: Exclude disks

5.2.318 `MonitoringDataProducerSysInfo: MonitoringDataProducerInternal`**parent:** `MonitoringDataProducerInternal`**5.2.319** `MonitoringDataProducerTest: MonitoringDataProducerInternal`**parent:** `MonitoringDataProducerInternal`**Parameter:** `instances`**Type:** unsigned integer**Description:** Number of instances per test**5.2.320** `MonitoringDataProducerTrustedTool: MonitoringDataProducer`**parent:** `MonitoringDataProducer`**Parameter:** `port`**Type:** unsigned integer**Description:** Port**Parameter:** `localhost`**Type:** boolean**Description:** Only listen on localhost**Parameter:** `secret`**Type:** string**Description:** Secret**5.2.321** `MonitoringDataProducerUserCount: MonitoringDataProducerInternal`**parent:** `MonitoringDataProducerInternal`**Parameter:** `customScript`**Type:** string**Description:** Custom script**Parameter:** `customScriptTimeout`**Type:** unsigned integer**Description:** Custom script timeout**Parameter:** `minimalUserId`**Type:** unsigned integer**Description:** Minimal user ID**Parameter:** `namesInInfoMessage`**Type:** boolean**Description:** Names in info message, could lead to lots of data**5.2.322** `MonitoringDataProducerWlmSlot: MonitoringDataProducer`**parent:** `MonitoringDataProducer`**5.2.323** `MonitoringDeviceStateSubSystemInfo: Entity`**parent:** `Entity`**Parameter:** `name`

Type: string

Description: Name

Parameter: up

Type: unsigned integer

Description: Number of up devices

Parameter: down

Type: unsigned integer

Description: Number of down devices

Parameter: closed

Type: unsigned integer

Description: Number of closed devices

Parameter: muted

Type: unsigned integer

Description: Number of muted devices

5.2.324 MonitoringDrainAction: MonitoringAction

parent: MonitoringAction

5.2.325 MonitoringDynamicExecutionMultiplexer: MonitoringExecutionMultiplexer

parent: MonitoringExecutionMultiplexer

Parameter: local

Type: boolean

Description: Run on the local node

Parameter: offload

Type: boolean

Description: Run on the nodes offloaded onto this node

5.2.326 MonitoringEmailAction: MonitoringAction

parent: MonitoringAction

Parameter: recipients

Type: list of strings

Description: Recipients

Parameter: allAdministrators

Type: boolean

Description: Also send e-mail to all administrator

Parameter: server

Type: string

Description: The SNMP server

Parameter: sender

Type: string

Description: The sender of the e-mail

Parameter: info

Type: string

Description: Extra information passed in the e-mail

Parameter: timeout

Type: unsigned integer

Description: Timeout

Parameter: mergeDelay

Type: float

Description: Maximal action delay in order to merge with others

Parameter: mergeTrigger

Type: boolean

Description: Merge action from multiple triggers into one

Parameter: mergeMeasurable

Type: boolean

Description: Merge action from multiple measurables into one

5.2.327 MonitoringEventAction: MonitoringAction

parent: MonitoringAction

Parameter: profiles

Type: list of strings

Description: Inform all sessions with the specified profile, none is all

Parameter: userNames

Type: list of strings

Description: Inform all sessions with the specified user names, none is all

Parameter: mergeDelay

Type: float

Description: Maximal action delay in order to merge with others

5.2.328 MonitoringExecutionFilter: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: filterOperation

Type: enum

Description: The filter operation to be performed

5.2.329 MonitoringExecutionMultiplexer: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: filterOperation

Type: enum

Description: The filter operation to be performed

5.2.330 MonitoringExpression: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

5.2.331 MonitoringGroupedExpression: MonitoringExpression

parent: MonitoringExpression

Parameter: op

Type: enum

Description: Operator

Parameter: allowMissing

Type: boolean

Description: Allow missing sub expressions

Parameter: expressions

Type: list of MonitoringCompareExpression

Description: Expressions

5.2.332 MonitoringHealthOverview: Entity

parent: Entity

Parameter: ref_entity_uuid

Type: UUID

Description: Entity

Parameter: alertLevelMaximum

Type: unsigned integer

Description: Maximal severity of all failed triggers

Parameter: alertLevelSum

Type: unsigned integer

Description: Total severity of all failed triggers

Parameter: alertLevelCount

Type: unsigned integer

Description: Total count of all failed triggers

Parameter: timestamp

Type: unsigned integer

Description: Timestamp of data

Parameter: info

Type: string

Description: Info

5.2.333 MonitoringImageUpdateAction: MonitoringAction

parent: MonitoringAction

5.2.334 MonitoringJobMetricSettings: Entity

parent: Entity

Parameter: excludeDevices

Type: list of strings

Description: Exclude block devices from metric collection (by default all the devices are sampled)

Parameter: includeDevices

Type: list of strings

Description: Only these devices will be sampled if the set is not empty

Parameter: enableAdvancedMetrics

Type: boolean

Description: Sample advanced metrics as well as basic metrics

Parameter: mapJobsToGpus

Type: boolean

Description: Associate job with GPUs where the job processes run when possible

Parameter: excludeMetrics

Type: list of strings

Description: Exclude metrics by name from collection

Parameter: includeMetrics

Type: list of strings

Description: Only these metrics will be samples if the set is not empty

Parameter: cgroupBaseDirectory

Type: string

Description: CGroup base directory

Parameter: `cgroupSearch`

Type: `string`

Description: Search field for finding the WLM CGroup

Parameter: `keepAliveSleep`

Type: `float`

Description: Time the cgroup keepalive process sleeps

Parameter: `samplingType`

Type: `enum`

Description: Type of metrics sampling

Parameter: `pickupInterval`

Type: `float`

Description: High initial pickup interval

Parameter: `pickupTimes`

Type: `unsigned integer`

Description: Number of times to apply the high initial pickup interval

Parameter: `pickupPriority`

Type: `unsigned integer`

Description: Priority of the pickup interval change

5.2.335 `MonitoringLuaExecutionFilter: MonitoringExecutionFilter`

parent: `MonitoringExecutionFilter`

Parameter: `code`

Type: `string`

Description: Lua code

Parameter: `notes`

Type: `string`

Description: Notes

5.2.336 `MonitoringLuaExecutionMultiplexer: MonitoringExecutionMultiplexer`

parent: `MonitoringExecutionMultiplexer`

Parameter: `code`

Type: `string`

Description: Lua code

Parameter: `notes`

Type: `string`

Description: Notes

5.2.337 MonitoringMeasurable: Entity**parent:** Entity**Parameter:** producer**Type:** reference to MonitoringDataProducer**Description:** Monitoring data producer**Parameter:** name**Type:** string**Description:** Name**Parameter:** parameter**Type:** string**Description:** Parameter**Parameter:** maxAge**Type:** float**Description:** Maximal age of historic data, 0 for infinite**Parameter:** maxSamples**Type:** unsigned integer**Description:** Maximal samples of historic data, 0 for infinite**Parameter:** disabled**Type:** boolean**Description:** Disable: do not process or save to disk**Parameter:** disableTriggers**Type:** boolean**Description:** Disable triggers from being evaluated**Parameter:** gap**Type:** unsigned integer**Description:** Number of missed samples before we add a NaN**Parameter:** introduceNaN**Type:** boolean**Description:** Introduce NaN if device goes up/down/up**Parameter:** description**Type:** string**Description:** Description**Parameter:** typeClass**Type:** string**Description:** Type class, slash(/) separated for levels

Parameter: `sourceType`

Type: `enum`

Description: Source of the measurable

Parameter: `consolidator`

Type: reference to `MonitoringConsolidator` or `None`

Description: Consolidator configuration

Parameter: `suppressedByGoingDown`

Type: `boolean`

Description: Suppress running action if device is going down

Parameter: `access`

Type: `enum`

Description: User access control

Parameter: `associatedUser`

Type: `string`

Description: User associated with this measurable

5.2.338 `MonitoringMeasurableEnum: MonitoringMeasurable`

parent: `MonitoringMeasurable`

5.2.339 `MonitoringMeasurableHealthCheck: MonitoringMeasurable`

parent: `MonitoringMeasurable`

5.2.340 `MonitoringMeasurableMetric: MonitoringMeasurable`

parent: `MonitoringMeasurable`

Parameter: `minimum`

Type: `float`

Description: Minimum

Parameter: `maximum`

Type: `float`

Description: Maximum

Parameter: `cumulative`

Type: `boolean`

Description: Cumulative

Parameter: `unit`

Type: `string`

Description: Unit

5.2.341 `MonitoringNodeListExecutionFilter: MonitoringExecutionFilter`

parent: `MonitoringExecutionFilter`

Parameter: `nodes`

Type: list of references to Node

Description: List of nodes belonging to this group

5.2.342 MonitoringNodeListExecutionMultiplexer: MonitoringExecutionMultiplexer

parent: MonitoringExecutionMultiplexer

Parameter: nodes

Type: list of references to Node

Description: List of nodes belonging to this group

5.2.343 MonitoringOffloadBackupInformation: Entity

parent: Entity

Parameter: ref_monitoring_node_uuid

Type: UUID

Description: Node

Parameter: ref_backup_node_uuids

Type: list of unsigned numbers

Description: Node

5.2.344 MonitoringOffloadInformation: Entity

parent: Entity

Parameter: ref_monitoring_node_uuid

Type: UUID

Description: Node

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: ref_best_monitoring_node_uuid

Type: UUID

Description: Node

Parameter: ref_viable_monitoring_node_uuids

Type: list of unsigned numbers

Description: Node

5.2.345 MonitoringOverlayListExecutionFilter: MonitoringExecutionFilter

parent: MonitoringExecutionFilter

Parameter: overlays

Type: list of references to ConfigurationOverlay

Description: List of overlays belonging to this group

5.2.346 MonitoringOverlayListExecutionMultiplexer: MonitoringExecutionMultiplexer**parent:** MonitoringExecutionMultiplexer**Parameter:** overlays**Type:** list of references to ConfigurationOverlay**Description:** List of overlays belonging to this group**5.2.347 MonitoringPickupInterval: Entity****parent:** Entity**Parameter:** ref_node_uuid**Type:** UUID**Description:** Node**Parameter:** interval**Type:** float**Description:** Interval on which the RPC will be done**Parameter:** times**Type:** unsigned integer**Description:** Number of times the RPC will be done with the interval**Parameter:** priority**Type:** unsigned integer**Description:** Priority of the current pickup interval**5.2.348 MonitoringPlotterSubSystemInfo: Entity****parent:** Entity**Parameter:** name**Type:** string**Description:** Name**Parameter:** first**Type:** unsigned integer**Description:** First plot request**Parameter:** last**Type:** unsigned integer**Description:** Last plot request**Parameter:** count**Type:** unsigned integer**Description:** Number of plot requests**Parameter:** samples**Type:** unsigned integer

Description: Number of data samples

Parameter: `sources`

Type: unsigned integer

Description: Number of sources

5.2.349 `MonitoringPowerAction: MonitoringAction`

parent: `MonitoringAction`

5.2.350 `MonitoringPowerOffAction: MonitoringPowerAction`

parent: `MonitoringPowerAction`

5.2.351 `MonitoringPowerOnAction: MonitoringPowerAction`

parent: `MonitoringPowerAction`

5.2.352 `MonitoringPowerResetAction: MonitoringPowerAction`

parent: `MonitoringPowerAction`

5.2.353 `MonitoringRebootAction: MonitoringAction`

parent: `MonitoringAction`

Parameter: `runPreHaltOperations`

Type: boolean

Description: Run pre-halt operations

Parameter: `preHaltOperationTimeout`

Type: unsigned integer

Description: Run pre-halt operation timeout

5.2.354 `MonitoringResourceExecutionFilter: MonitoringExecutionFilter`

parent: `MonitoringExecutionFilter`

Parameter: `resources`

Type: list of strings

Description: Resources

Parameter: `op`

Type: enum

Description: Operator

5.2.355 `MonitoringResourceExecutionMultiplexer: MonitoringExecutionMultiplexer`

parent: `MonitoringExecutionMultiplexer`

Parameter: `resources`

Type: list of strings

Description: Resources

Parameter: `op`

Type: enum

Description: Operator

5.2.356 MonitoringRole: Role

parent: Role

Parameter: numberOfBackups

Type: unsigned integer

Description: Minimum number of backups of the monitoring data

Parameter: backupRing

Type: unsigned integer

Description: Only backup to nodes within the same ring

Parameter: maximumNumberOfNodes

Type: unsigned integer

Description: Maximum number of nodes the monitoring can handle, set to 0 for no limit

Parameter: delayAfterUp

Type: unsigned integer

Description: Delay after node becomes up before it can take over from other nodes

Parameter: delayAfterDown

Type: unsigned integer

Description: Delay after node goes down before the workload will be offloaded to other nodes

Parameter: backupOnShutdown

Type: boolean

Description: Take a backup when the node is shutdown via RPC

Parameter: backupOnReboot

Type: boolean

Description: Take a backup when the node is reboot via RPC

Parameter: backupOnPowerOff

Type: boolean

Description: Take a backup when the node is power reset via RPC

Parameter: backupOnPowerReset

Type: boolean

Description: Take a backup when the node is powered off via RPC

Parameter: backupOnTerminate

Type: boolean

Description: Take a backup when the node is terminated via RPC

Parameter: nodeFilters

Type: list of MonitoringExecutionFilter

Description: Filter nodes that can be monitored by this node, clear this list for automatic

5.2.357 `MonitoringScriptAction: MonitoringAction`

parent: `MonitoringAction`

Parameter: `script`

Type: `string`

Description: `Script`

Parameter: `arguments`

Type: `list of strings`

Description: `Arguments`

Parameter: `timeout`

Type: `unsigned integer`

Description: `Timeout`

Parameter: `nodeEnvironment`

Type: `boolean`

Description: Pass the node environment to the script

Parameter: `runInShell`

Type: `boolean`

Description: `Run in shell`

Parameter: `mergeDelay`

Type: `float`

Description: Maximal action delay in order to merge with others

Parameter: `mergeTrigger`

Type: `boolean`

Description: Merge action from multiple triggers into one

Parameter: `mergeMeasurable`

Type: `boolean`

Description: Merge action from multiple measurables into one

5.2.358 `MonitoringServiceAction: MonitoringAction`

parent: `MonitoringAction`

Parameter: `service`

Type: `string`

Description: `Service`

Parameter: `arguments`

Type: `list of strings`

Description: `Arguments`

5.2.359 `MonitoringServiceRestartAction: MonitoringServiceAction`**parent:** `MonitoringServiceAction`**5.2.360** `MonitoringServiceStartAction: MonitoringServiceAction`**parent:** `MonitoringServiceAction`**5.2.361** `MonitoringServiceStopAction: MonitoringServiceAction`**parent:** `MonitoringServiceAction`**5.2.362** `MonitoringServiceSubSystemInfo: Entity`**parent:** `Entity`**Parameter:** `name`**Type:** `string`**Description:** Name**Parameter:** `stopped`**Type:** `boolean`**Description:** Stopped**Parameter:** `suspended`**Type:** `boolean`**Description:** Suspended**Parameter:** `last`**Type:** `unsigned integer`**Description:** Last sample time**Parameter:** `queued`**Type:** `unsigned integer`**Description:** Queued items**Parameter:** `handled`**Type:** `unsigned integer`**Description:** Handled items**Parameter:** `cacheMiss`**Type:** `unsigned integer`**Description:** Miss cached count**5.2.363** `MonitoringShutdownAction: MonitoringAction`**parent:** `MonitoringAction`**Parameter:** `runPreHaltOperations`**Type:** `boolean`**Description:** Run pre-halt operations**Parameter:** `preHaltOperationTimeout`**Type:** `unsigned integer`

Description: Run pre-halt operation timeout

5.2.364 MonitoringStorageSubSystemInfo: Entity

parent: Entity

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: name

Type: string

Description: Name

Parameter: elements

Type: unsigned integer

Description: Elements

Parameter: disksize

Type: unsigned integer

Description: Disk size

Parameter: freespace

Type: unsigned integer

Description: Free disk space

Parameter: usage

Type: float

Description: Usage

5.2.365 MonitoringSubSystemInfo: SubSystemInfo

parent: SubSystemInfo

Parameter: storage

Type: list of MonitoringStorageSubSystemInfo

Description: Storage

Parameter: service

Type: list of MonitoringServiceSubSystemInfo

Description: Service

Parameter: plotter

Type: list of MonitoringPlotterSubSystemInfo

Description: Plotter

Parameter: dataCache

Type: list of MonitoringDataCacheSubSystemInfo

Description: DataCache

Parameter: cache

Type: list of MonitoringCacheSubSystemInfo

Description: Cache

Parameter: deviceState

Type: list of MonitoringDeviceStateSubSystemInfo

Description: DeviceState

5.2.366 MonitoringTrigger: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: disabled

Type: boolean

Description: Disable

Parameter: severity

Type: unsigned integer

Description: Severity

Parameter: markEntityAsFailed

Type: boolean

Description: Mark entity as failed

Parameter: markEntityAsUnknown

Type: boolean

Description: Mark entity as unknown

Parameter: stateFlappingPeriod

Type: float

Description: Time period to check for state flapping

Parameter: stateFlappingCount

Type: unsigned integer

Description: Number of times states need to change in the specified period before it is considered stateflapping

Parameter: expression

Type: MonitoringExpression

Description: Expression

Parameter: enterActions

Type: list of references to MonitoringAction

Description: Actions to execute when the expression enters 'true' state

Parameter: duringActions

Type: list of references to MonitoringAction

Description: Actions to execute when the expression is and has been 'true'

Parameter: leaveActions

Type: list of references to MonitoringAction

Description: Actions to execute when the expression is was 'true' and no longer is

Parameter: stateFlappingActions

Type: list of references to MonitoringAction

Description: Actions to execute when the expression is state flapping

5.2.367 MonitoringTypeExecutionFilter: MonitoringExecutionFilter

parent: MonitoringExecutionFilter

Parameter: headNode

Type: boolean

Description: Head node

Parameter: physicalNode

Type: boolean

Description: Physical node

Parameter: cloudNode

Type: boolean

Description: Cloud node

Parameter: liteNode

Type: boolean

Description: Lite node

Parameter: dpuNode

Type: boolean

Description: DPU node

5.2.368 MonitoringTypeExecutionMultiplexer: MonitoringExecutionMultiplexer

parent: MonitoringExecutionMultiplexer

Parameter: types

Type: list of strings

Description: Types

5.2.369 MonitoringUndrainAction: MonitoringAction

parent: MonitoringAction

5.2.370 MsgQueue: Entity

parent: Entity

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: msqid

Type: integer

Description: Message queue ID

Parameter: ipcperm

Type: IPCPerm

Description: IPC permissions

Parameter: size

Type: unsigned integer

Description: Size in bytes

Parameter: qnum

Type: unsigned integer

Description: Number of messages in the queue

5.2.371 NetQSettings: Entity

parent: Entity

Parameter: server

Type: string

Description: NetQ server

Parameter: username

Type: string

Description: Username to use for NetQ API calls

Parameter: password

Type: string

Description: Password to use for NetQ API calls

Parameter: port

Type: unsigned integer

Description: Port

Parameter: verifySSL

Type: boolean

Description: Verify SSL host certificate

5.2.372 Network: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: IPv6

Type: boolean

Description: IPv6 enabled

Parameter: ipv6NetmaskBits

Type: unsigned integer

Description: Netmask or Classless Inter-Domain Routing for IPv6

Parameter: netmaskBits

Type: unsigned integer

Description: Netmask or Classless Inter-Domain Routing

Parameter: ipv6BaseAddress

Type: IP

Description: Base IP address for Ipv6

Parameter: baseAddress

Type: IP

Description: Base IP address

Parameter: domainName

Type: string

Description: Domain name

Parameter: type

Type: enum

Description: Type of network, internal: local cluster network, external: connection to outside world, global: unique network accros the cloud, tunnel: cloud network, netmap: virtual network user by cloud nodes to connect to nodes inside the cluster

Parameter: mtu

Type: unsigned integer

Description: The maximum transmission unit.

Parameter: bootable

Type: boolean

Description: If set compute nodes can boot using this network

Parameter: dynamicRangeStart

Type: IP

Description: First IP address in the networks dynamic range

Parameter: dynamicRangeEnd

Type: IP

Description: Last IP address in the networks dynamic range

Parameter: lockDownDhcpd

Type: boolean

Description: Don't respond to dhcp request of new nodes via this network

Parameter: management

Type: boolean

Description: If set, the network can be used as a management network

Parameter: gateway

Type: IP

Description: Gateway

Parameter: ipv6Gateway

Type: IP

Description: IPv6 Gateway

Parameter: notes

Type: string

Description: Administrator notes

Parameter: cloudSubnetID

Type: string

Description: The Cloud ID of the subnet

Parameter: EC2AvailabilityZone

Type: string

Description: The AWS availability zone inside which the subnet exists

Parameter: allowAutosign

Type: enum

Description: Specify if certificate request from node installers can be signed automatically

Parameter: generateDNSZone

Type: enum

Description: Specify which DNS zones should be written

Parameter: excludeFromSearchDomain

Type: boolean

Description: Exclude from search domain in /etc/resolv.conf file

Parameter: searchDomainIndex

Type: unsigned integer

Description: Search domain index in /etc/resolv.conf file, set to 0 for automatic

Parameter: disableAutomaticExports

Type: boolean

Description: Disable creation of automatic filesystem exports

5.2.373 NetworkAliasInterface: NetworkInterface

parent: NetworkInterface

5.2.374 NetworkBmcInterface: NetworkInterface

parent: NetworkInterface

Parameter: gateway

Type: IP

Description: Gateway IP address, usually the head node's IP on the BMC network.

Parameter: vlanid

Type: unsigned integer

Description: VLAN ID setting for the BMC card. When set to 0, VLAN capabilities are disabled.

Parameter: lanchannel

Type: unsigned integer

Description: LAN channel for BMC interface

5.2.375 NetworkBondInterface: NetworkInterface

parent: NetworkInterface

Parameter: mode

Type: integer

Description: Bonding mode, see bonding.txt in the kernel documentation.

Parameter: options

Type: string

Description: Options to pass to the bonding driver, see kernel documentation.

Parameter: interfaces

Type: list of strings

Description: List of interfaces which should be channel-bonded.

5.2.376 NetworkBridgeInterface: NetworkInterface

parent: NetworkInterface

Parameter: stp

Type: boolean

Description: Spanning Tree Protocol enabled.

Parameter: forward_delay

Type: unsigned integer

Description: Frame forward delay (in seconds)

Parameter: interfaces

Type: list of strings

Description: List of interfaces which should be bridged.

5.2.377 *NetworkConnection: Entity*

parent: Entity

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: source

Type: IP

Description: The source IP address

Parameter: sourcePort

Type: unsigned integer

Description: The source port

Parameter: destination

Type: IP

Description: The destination IP address

Parameter: destinationPort

Type: unsigned integer

Description: The destination port

Parameter: type

Type: enum

Description: The connection type

Parameter: state

Type: enum

Description: The connection state

5.2.378 *NetworkInterface: Entity*

parent: Entity

Parameter: name

Type: string

Description: The network interface device name

Parameter: ip

Type: IP

Description: The interfaces IP address

Parameter: ipv6Ip

Type: IP

Description: The interfaces IPv6 IP address

Parameter: dhcp

Type: boolean

Description: Get the ip via DHCP, leave ip blank

Parameter: ipv6Dhcp

Type: boolean

Description: Get the IPv6IP via DHCP, leave IPv6IP blank

Parameter: bringupduringinstall

Type: enum

Description: Brings up interface during install if on

Parameter: network

Type: reference to Network or None

Description: Network the interface is connected to

Parameter: alternativeHostname

Type: string

Description: An alternative hostname to use if this is second (startif != always) IP address on the same network

Parameter: additionalHostnames

Type: list of strings

Description: List of additional hostnames that should resolve to the interfaces IP address

Parameter: startIf

Type: enum

Description: Only run this service in the specified state

Parameter: onNetworkPriority

Type: unsigned integer

Description: Priority of DNS resolution queries for the interface on its network

Parameter: connectedMode

Type: boolean

Description: IB connected mode

Parameter: switchPorts

Type: list of SwitchPort

Description: Switch ports

5.2.379 NetworkNetMapInterface: NetworkInterface

parent: NetworkInterface

5.2.380 NetworkPhysicalInterface: NetworkInterface

parent: NetworkInterface

Parameter: mac

Type: MAC

Description: The interfaces MAC address

Parameter: speed

Type: string

Description: The interfaces network speed.

Parameter: cardtype

Type: string

Description: The type of network interface.

5.2.381 NetworkTunnelInterface: NetworkInterface

parent: NetworkInterface

5.2.382 NetworkVLANInterface: NetworkInterface

parent: NetworkInterface

Parameter: reorder_hdr

Type: boolean

Description: When set to true the VLAN device will move the ethernet header around to make it look exactly like a real ethernet device.

5.2.383 NewNode: Entity

parent: Entity

Parameter: switchPort

Type: SwitchPort or None

Description: Switch port the new node is connected to

Parameter: mac

Type: MAC

Description: MAC address of the new node

Parameter: type

Type: enum

Description: Type of device

Parameter: firstSeen

Type: unsigned integer

Description: Uptime when the new node was first seen

Parameter: lastSeen

Type: unsigned integer

Description: Uptime when the new node was last seen

Parameter: count

Type: unsigned integer

Description: Number of times the node was reported as new

Parameter: stop

Type: boolean

Description: Force the request to stop

Parameter: info

Type: string

Description: Free text information string passed by node-installer

Parameter: appeared

Type: timestamp

Description: Timestamp when the new node first appeared

5.2.384 NginxReverseProxy: Entity

parent: Entity

Parameter: port

Type: unsigned integer

Description: Port

Parameter: address

Type: IP

Description: Destination Network Address

Parameter: node

Type: reference to Node

Description: Destination hostname(only for nodes)

Parameter: destport

Type: unsigned integer

Description: Port

Parameter: description

Type: string

Description: Description

5.2.385 NginxRole: BaseNginxRole

parent: BaseNginxRole

Parameter: nginxReverseProxy

Type: list of NginxReverseProxy

Description: Nginx Reverse Proxy Configuration

5.2.386 Node: Device

parent: Device

Parameter: cmdaemonUrl

Type: string

Description: none

Parameter: `interfaces`

Type: list of `NetworkInterface`

Description: Ip on the management network

Parameter: `provisioningInterface`

Type: `NetworkInterface`

Description: Network interface on which the node will receive software image updates

Parameter: `fsmounts`

Type: list of `FSMount`

Description: Configure the entries placed in `/etc/fstab`

Parameter: `fsexports`

Type: list of `FSExport`

Description: Configure the entries placed in `/etc/exports`

Parameter: `staticRoutes`

Type: list of `StaticRoute`

Description: Configure static routes for the interfaces

Parameter: `roles`

Type: list of `Role`

Description: Assign the roles the node should play

Parameter: `services`

Type: list of `OSServiceConfig`

Description: Manage operating system services

Parameter: `pxelabel`

Type: string

Description: PXE Label to be displayed when this node boots

Parameter: `customRemoteConsoleScript`

Type: string

Description: Script that will be used to remote console a device

Parameter: `customRemoteConsoleScriptArgument`

Type: string

Description: Argument for the custom remote console script

Parameter: `provisioningTransport`

Type: enum

Description: Defines what transport protocol should be used for provisioning. Options are RSYNC-SSH or RSYNCDAEMON. The latter is the default, is a bit less secure but faster.

Parameter: `gpuSettings`

Type: list of `GPUSettings`

Description: Configure the GPUs

Parameter: `excludeListManipulateScript`

Type: `string`

Description: A user defined script that can be used to do custom last minute changes to the exclude lists used by `cmdaemon` to `rsync`

Parameter: `ioScheduler`

Type: `string`

Description: The I/O scheduler for the disks

Parameter: `useExclusivelyFor`

Type: `string`

Description: Use node exclusively for desired function: stop all other services

Parameter: `disableFabricNVME`

Type: `boolean`

Description: Disable fabric NVME

Parameter: `bmcSettings`

Type: `BMCSettings` or `None`

Description: Configure the baseboard management controller settings

Parameter: `seLinuxSettings`

Type: `SELinuxSettings` or `None`

Description: Configure the SELinux settings

Parameter: `proxySettings`

Type: `ProxySettings` or `None`

Description: Configure the proxy server settings

Parameter: `versionConfigFiles`

Type: `boolean`

Description: Keep old versions of all config files for this node

Parameter: `forceFullEnvironment`

Type: `boolean`

Description: Force this node to create the environment for all nodes

Parameter: `biosSetup`

Type: free JSON object

Description: BIOS setup

Parameter: `timeZoneSettings`

Type: `TimeZoneSettings` or `None`

Description: Time zone

5.2.387 NodeGroup: Entity**parent:** Entity**Parameter:** name**Type:** string**Description:** Name**Parameter:** nodes**Type:** list of references to Node**Description:** List of nodes belonging to this group**5.2.388 NodeHierarchyResult: Entity****parent:** Entity**Parameter:** responsibility**Type:** enum**Description:** Responsibility**Parameter:** nodes**Type:** list of unsigned numbers**Description:** Node**Parameter:** rules**Type:** list of unsigned numbers**Description:** Rules from which nodes were derived**Parameter:** responsible**Type:** list of unsigned numbers**Description:** List of nodes that are responsible for the node**5.2.389 NodeHierarchyRule: Entity****parent:** Entity**Parameter:** name**Type:** string**Description:** Name**Parameter:** description**Type:** string**Description:** description**Parameter:** disabled**Type:** boolean**Description:** Disabled**Parameter:** priority**Type:** unsigned integer

Description: Priority

Parameter: allowSelf

Type: boolean

Description: Allow node to serve itself

Parameter: locationMatch

Type: boolean

Description: Source and target node locations need to match

Parameter: sources

Type: list of NodeHierarchyRuleSelection

Description: Source selection

Parameter: targets

Type: list of NodeHierarchyRuleSelection

Description: Target selection

Parameter: director

Type: boolean

Description: Director

Parameter: dhcp

Type: boolean

Description: DHCP

Parameter: dns

Type: boolean

Description: DNS

Parameter: ntp

Type: boolean

Description: NTP

Parameter: vpn

Type: boolean

Description: VPN

Parameter: rsyslog

Type: boolean

Description: rsyslog

Parameter: ldap

Type: boolean

Description: LDAP

Parameter: bios

Type: boolean

Description: BIOS

Parameter: provisioning

Type: boolean

Description: Provisioning

Parameter: mount

Type: boolean

Description: Mount

Parameter: sshProxy

Type: boolean

Description: SSH proxy

Parameter: cmdaemonConfiguration

Type: boolean

Description: Configuration

Parameter: cmdaemonRpcForward

Type: boolean

Description: RPC forward

Parameter: cmdaemonEvents

Type: boolean

Description: Events

Parameter: cmdaemonStatus

Type: boolean

Description: Status

Parameter: cmdaemonWebSocket

Type: boolean

Description: Web socket for lite nodes

Parameter: monitoringOffload

Type: boolean

Description: Monitoring offload

Parameter: distribution

Type: enum

Description: Distribution

5.2.390 NodeHierarchyRuleCategorySelection: NodeHierarchyRuleSelection

parent: NodeHierarchyRuleSelection

Parameter: categories

Type: list of references to Category

Description: List of categories

5.2.391 `NodeHierarchyRuleCloudRegionSelection: NodeHierarchyRuleSelection`

parent: NodeHierarchyRuleSelection

Parameter: regions

Type: list of references to CloudRegion

Description: List of regions

5.2.392 `NodeHierarchyRuleDeviceSelection: NodeHierarchyRuleSelection`

parent: NodeHierarchyRuleSelection

Parameter: devices

Type: list of references to Device

Description: List of devices

5.2.393 `NodeHierarchyRuleEdgeSiteSelection: NodeHierarchyRuleSelection`

parent: NodeHierarchyRuleSelection

Parameter: edgesites

Type: list of references to EdgeSite

Description: List of edgesites

5.2.394 `NodeHierarchyRuleNodeGroupSelection: NodeHierarchyRuleSelection`

parent: NodeHierarchyRuleSelection

Parameter: nodegroups

Type: list of references to NodeGroup

Description: List of nodegroups

5.2.395 `NodeHierarchyRuleNodeSelection: NodeHierarchyRuleSelection`

parent: NodeHierarchyRuleSelection

Parameter: nodes

Type: list of references to Node

Description: List of nodes

5.2.396 `NodeHierarchyRuleRackSelection: NodeHierarchyRuleSelection`

parent: NodeHierarchyRuleSelection

Parameter: racks

Type: list of references to Rack

Description: List of racks

5.2.397 `NodeHierarchyRuleRoleSelection: NodeHierarchyRuleSelection`

parent: NodeHierarchyRuleSelection

Parameter: edgeDirector

Type: boolean

Description: Edge director

Parameter: cloudDirector
Type: boolean
Description: Cloud director

Parameter: boot
Type: boolean
Description: Boot

Parameter: provisioning
Type: boolean
Description: Provisioning

Parameter: dns
Type: boolean
Description: DNS

Parameter: ldap
Type: boolean
Description: LDAP

Parameter: monitoring
Type: boolean
Description: Monitoring

5.2.398 NodeHierarchyRuleSelection: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: operation
Type: enum
Description: Operation

5.2.399 NodeHierarchyRuleTypeSelection: NodeHierarchyRuleSelection
parent: NodeHierarchyRuleSelection

Parameter: headNode
Type: boolean
Description: Head node

Parameter: physicalNode
Type: boolean
Description: Physical node

Parameter: cloudNode
Type: boolean

Description: Cloud node

Parameter: liteNode

Type: boolean

Description: Lite node

Parameter: dpuNode

Type: boolean

Description: Lite node

Parameter: networkSwitch

Type: boolean

Description: Network switch

Parameter: fabricSwitch

Type: boolean

Description: Fabric switch

Parameter: fabricResourceBox

Type: boolean

Description: Fabric switch

Parameter: rackSensor

Type: boolean

Description: Rack sensor

Parameter: powerDistributionUnit

Type: boolean

Description: Power distribution unit

Parameter: genericDevice

Type: boolean

Description: Generic device

Parameter: unmanagedNode

Type: boolean

Description: Unmanaged node

Parameter: chassis

Type: boolean

Description: Chassis

5.2.400 NvidiaGPUSettings: GPUSettings

parent: GPUSettings

Parameter: powerLimit

Type: unsigned integer

Description: An upper limit on how much power a GPU can use

Parameter: `eccMode`

Type: `enum`

Description: Set the ECC mode in which the GPU runs

Parameter: `computeMode`

Type: `enum`

Description: Set the compute mode in which the GPU runs

Parameter: `clockSyncBoostMode`

Type: `enum`

Description: Set the clock sync boost among the GPUs in group

Parameter: `multiProcessorClockSpeed`

Type: `unsigned integer`

Description: Set the streaming multiprocessor clock speed of the GPU

Parameter: `memoryClockSpeed`

Type: `unsigned integer`

Description: Set the streaming memory clock speed of the GPU

Parameter: `migProfiles`

Type: `list of strings`

Description: MIG profiles that will be applied to the GPU

5.2.401 OCIDisk:Entity

parent: `Entity`

Parameter: `name`

Type: `string`

Description: Name of the disk

Parameter: `size`

Type: `unsigned integer`

Description: Size of the drive

Parameter: `kmsKeyId`

Type: `string`

Description: The OCID of the Vault service key to assign as the master encryption key for the volume

Parameter: `vpusPerGb`

Type: `unsigned integer`

Description: The number of volume performance units (VPUs) that will be applied to this volume per GB, representing the Block Volume service's elastic performance options

Parameter: `maxVPUsPerGB`

Type: `unsigned integer`

Description: This will be the maximum VPU's/GB performance level that the volume will be auto-tuned temporarily based on performance monitoring. This parameter has an effect only if performance based autotune is enabled

Parameter: `enablePerformanceBasedAutotune`

Type: `boolean`

Description: If a volume is being throttled at the current setting for a certain period of time, auto-tune will gradually increase the volume's performance limited up to Maximum VPU's/GB. After the volume has been idle at the current setting for a certain period of time, auto-tune will gradually decrease the volume's performance limited down to Default/Minimum VPU's/GB

Parameter: `enableDetachedAutotune`

Type: `boolean`

Description: Volume's performance will be tuned to the lower cost settings once detached

5.2.402 `OCIInstancePool: Entity`

parent: `Entity`

Parameter: `name`

Type: `string`

Description: User-defined name of the instance pool

Parameter: `provider`

Type: reference to `CloudProvider`

Description: Cloud provider

Parameter: `region`

Type: reference to `OCIRegion`

Description: Region for instance

Parameter: `isClusterNetwork`

Type: `boolean`

Description: Is instance pool a part of cluster network

Parameter: `instancePoolId`

Type: `string`

Description: Instance pool OCID (generated automatically by default)

Parameter: `clusterNetworkId`

Type: `string`

Description: Cluster network OCID (if applicable, generated automatically by default)

5.2.403 `OCIPlatformConfig: Entity`

parent: `Entity`

Parameter: `platformType`

Type: `string`

Description: The type of platform being configured.

Parameter: `isSecureBootEnabled`

Type: `enum`

Description: Whether Secure Boot is enabled on the instance.

Parameter: `isTrustedPlatformModuleEnabled`

Type: `enum`

Description: Whether the Trusted Platform Module (TPM) is enabled on the instance.

Parameter: `isMeasuredBootEnabled`

Type: `enum`

Description: Whether the Measured Boot feature is enabled on the instance.

Parameter: `isMemoryEncryptionEnabled`

Type: `enum`

Description: Whether the instance is a confidential instance.

Parameter: `numaNodesPerSocket`

Type: `string`

Description: The number of NUMA nodes per socket (NPS).

Parameter: `isSymmetricMultiThreadingEnabled`

Type: `enum`

Description: Whether symmetric multithreading is enabled on the instance. Symmetric multithreading is also called simultaneous multithreading (SMT) or Intel Hyper-Threading. Intel and AMD processors have two hardware execution threads per core (OCPU). SMT permits multiple independent threads of execution, to better use the resources and increase the efficiency of the CPU. When multithreading is disabled, only one thread is permitted to run on each core, which can provide higher or more predictable performance for some workloads.

Parameter: `isAccessControlServiceEnabled`

Type: `enum`

Description: Whether the Access Control Service is enabled on the instance. When enabled, the platform can enforce PCIe device isolation, required for VFIO device pass-through.

Parameter: `areVirtualInstructionsEnabled`

Type: `enum`

Description: Whether virtualization instructions are available. For example, Secure Virtual Machine for AMD shapes or VT-x for Intel shapes.

Parameter: `isInputOutputMemoryManagementUnitEnabled`

Type: `enum`

Description: Whether the input-output memory management unit is enabled.

Parameter: `percentageOfCoresEnabled`

Type: `unsigned integer`

Description: The percentage of cores enabled. Value must be a multiple of 25%. If the requested percentage results in a fractional number of cores, the system rounds up the number of cores across processors and provisions an instance with a whole number of cores. If the applications that you run on the instance use a core-based licensing model and need fewer cores than the full size of the shape, you can disable cores to reduce your licensing costs. The instance itself is billed for the full shape, regardless of whether all cores are enabled.

5.2.404 OCIProvider: CloudProvider

parent: CloudProvider

Parameter: defaultNodeInstallerImageId

Type: string

Description: Default node-installer image, can be overridden in cloudsettings

Parameter: defaultCompartmentId

Type: string

Description: Default compartment ID used, others are listed in <https://cloud.oracle.com/identity/compartments>.

Parameter: defaultRegion

Type: reference to OCIRegion or None

Description: Default region to start virtual machine in.

Parameter: defaultShape

Type: reference to OCIShape or None

Description: Default cloud node VM shape.

Parameter: APIRegionName

Type: string

Description: OCI region name to be used for listing available regions

Parameter: regions

Type: list of references to OCIRegion

Description: *none*

Parameter: securityGroupNode

Type: string

Description: Security group ID of the cloud nodes

Parameter: authUser

Type: string

Description: User ocid. Format is ocid1.user.oc1..<unique ID>, can be found in Profile->User Settings

Parameter: authKeyContent

Type: string

Description: API private key file's content (PEM format) to connect to OCI

Parameter: authFingerprint

Type: string

Description: Fingerprint of API Keys. Format is 12:34:56:78:90:ab:cd:ef:12:34:56:78:90:ab:cd:ef, can be found in Identity->Users->User Details->API Keys

Parameter: authTenancy

Type: string

Description: Usually one company will have a single tenancy. Format is ocid1.tenancy.oc1..<unique ID>, can be found in <https://cloud.oracle.com/tenancy>

Parameter: imagesCompartmentId

Type: string

Description: Compartment OCID to search for custom images

Parameter: imagesManifestBaseURL

Type: string

Description: Base URL to download images manifests

5.2.405 OCIRegion: CloudRegion

parent: CloudRegion

5.2.406 OCISettings: CloudSettings

parent: CloudSettings

Parameter: compartmentId

Type: string

Description: Compartment ID

Parameter: availabilityDomain

Type: string

Description: Availability domain

Parameter: instanceId

Type: string

Description: Instance ID in OCI

Parameter: imageId

Type: string

Description: ID of the image used to create instance ('latest': use latest AMI, '': inherit AMI from cloud provider)

Parameter: ocpus

Type: unsigned integer

Description: Oracle CPUs. If set to 0 then the default value from the shape will be used

Parameter: memory

Type: unsigned integer

Description: Size of the node's main memory. If set to 0 then the default value from the shape will be used

Parameter: `disks`

Type: list of `OCIDisk`

Description: Definitions of storage devices of the VM

Parameter: `shape`

Type: reference to `OCIShape` or `None`

Description: Instance shape

Parameter: `region`

Type: reference to `OCIRegion` or `None`

Description: Region for instance

Parameter: `instancePool`

Type: reference to `OCIInstancePool` or `None`

Description: Instance pool to place the VM in

Parameter: `useKernelAndInitrdFromTheSoftwareImage`

Type: boolean

Description: Make the cloud node's node-installer download the kernel and the initrd from the software image configured for this cloud node and then reboot the cloud node to use those, instead of using the kernel and initrd already present on the node-installer's cloud image.

Parameter: `capacityType`

Type: enum

Description: Instance capacity type

Parameter: `capacityReservationId`

Type: string

Description: Capacity Reservation ID

Parameter: `platformConfig`

Type: `OCIPlatformConfig`

Description: The platform configuration requested for the instance.

5.2.407 `OCIShape: CloudType`

parent: `CloudType`

Parameter: `maxVnics`

Type: unsigned integer

Description: The maximum number of VNIC attachments available for this shape.

Parameter: `networkPorts`

Type: unsigned integer

Description: The number of physical network interface card (NIC) ports available for this shape.

Parameter: `rdmaPorts`

Type: unsigned integer

Description: The number of networking ports available for the remote direct memory access (RDMA) network between nodes in a high performance computing (HPC) cluster network. If the shape does not support cluster networks, this value is 0.

Parameter: `isFlexible`

Type: `boolean`

Description: Whether the shape supports creating flexible instances. A flexible shape is a shape that lets you customize the number of OCPUs and the amount of memory when launching or resizing your instance.

Parameter: `cpusMin`

Type: `unsigned integer`

Description: The maximum number of OCPUs.

Parameter: `cpusMax`

Type: `unsigned integer`

Description: The maximum number of OCPUs.

Parameter: `memoryMin`

Type: `unsigned integer`

Description: The minimum amount of memory.

Parameter: `memoryMax`

Type: `unsigned integer`

Description: The maximum amount of memory.

Parameter: `memoryMinPerCpu`

Type: `unsigned integer`

Description: The minimum amount of memory per OCPU available for this shape.

Parameter: `memoryMaxPerCpu`

Type: `unsigned integer`

Description: The maximum amount of memory per OCPU available for this shape.

5.2.408 `OpenShiftClientRole`: `OpenShiftRole`

parent: `OpenShiftRole`

5.2.409 `OpenShiftProxyRole`: `BaseNginxRole`

parent: `BaseNginxRole`

Parameter: `unmanagedNodeConfiguration`

Type: reference to `UnmanagedNodeConfiguration`

Description: The unmanaged nodeconfiguration this role is linked with

Parameter: `httpPort`

Type: `unsigned integer`

Description: HTTP port to forward as nginx stream

Parameter: httpsPort

Type: unsigned integer

Description: HTTPs port to forward as nginx stream

5.2.410 OpenShiftRole: Role

parent: Role

Parameter: unmanagedNodeConfiguration

Type: reference to UnmanagedNodeConfiguration

Description: The unmanaged nodeconfiguration this role is linked with

5.2.411 OpenShiftWorkerRole: OpenShiftRole

parent: OpenShiftRole

Parameter: containerStoragePath

Type: string

Description: Container storage path

5.2.412 OpenStackIntermediateStorage: CMJobIntermediateStorage

parent: CMJobIntermediateStorage

Parameter: container

Type: string

Description: Container name to place data into

5.2.413 OSCloudDisk: Entity

parent: Entity

Parameter: name

Type: string

Description: Name of the disk

Parameter: bootIndex

Type: integer

Description: Defines the order in which a hypervisor will try devices when attempting to boot the guest from storage. Setting a negative value indicates that the device should not be used for booting

Parameter: size

Type: unsigned integer

Description: Size of the disk

Parameter: diskBus

Type: string

Description: Hypervisor-specific details about disk bus type

Parameter: deviceType

Type: string

Description: Hypervisor-specific details about disk device type

Parameter: `removeOnTermination`

Type: `boolean`

Description: If true, the drive will be removed when the instance it is attached to gets terminated

5.2.414 `OSCloudEphemeralDisk: OSCloudDisk`

parent: `OSCloudDisk`

Parameter: `format`

Type: `string`

Description: Filesystem to format the disk

5.2.415 `OSCloudExtension: Entity`

parent: `Entity`

Parameter: `name`

Type: `string`

Description: User-defined name of the private cloud

Parameter: `region`

Type: reference to `OSCloudRegion`

Description: Region of the cluster extension

Parameter: `network`

Type: reference to `Network`

Description: Network associated with the extension

Parameter: `floatingIpNetworkId`

Type: `string`

Description: Floating IP Network UUID or name

Parameter: `stackId`

Type: `string`

Description: Heat stack ID

Parameter: `defaultDirectorSecGroupId`

Type: `string`

Description: Default security group ID/name for the cloud director

Parameter: `defaultCnodeSecGroupId`

Type: `string`

Description: Default security group ID/name for the cloud nodes

Parameter: `extraField`

Type: list of strings

Description: A list of various advanced options

5.2.416 `OSCloudFlavor: CloudType`**parent:** CloudType**Parameter:** id**Type:** string**Description:** The ID of the flavor**5.2.417** `OSCloudProvider: CloudProvider`**parent:** CloudProvider**Parameter:** cloudApiType**Type:** string**Description:** Cloud provider type**Parameter:** authUrl**Type:** string**Description:** Keystone URL**Parameter:** username**Type:** string**Description:** Username**Parameter:** password**Type:** string**Description:** Password**Parameter:** projectId**Type:** string**Description:** Project ID**Parameter:** projectName**Type:** string**Description:** Project Name**Parameter:** projectDomainId**Type:** string**Description:** Project Domain Id**Parameter:** userDomainId**Type:** string**Description:** User Domain Id**Parameter:** keyPairName**Type:** string**Description:** SSH Key Pair Name**Parameter:** openStackVersion**Type:** string

Description: OpenStack release version (e.g. 2015.1.3)

Parameter: `openStackVersionName`

Type: string

Description: OpenStack release codename (e.g. Kilo)

Parameter: `extensions`

Type: list of `OSCloudExtension`

Description: List of extensions

Parameter: `defaultRegion`

Type: reference to `OSCloudRegion` or None

Description: Default region to start instances

Parameter: `defaultFlavor`

Type: reference to `OSCloudFlavor` or None

Description: Default cloud node flavor

Parameter: `defaultDirectorFlavor`

Type: reference to `OSCloudFlavor` or None

Description: Default cloud director Flavor

Parameter: `defaultImage`

Type: string

Description: Default node-installer image, can be overridden in the OS disk

5.2.418 `OSCloudRegion: CloudRegion`

parent: `CloudRegion`

Parameter: `id`

Type: string

Description: The ID of the region

5.2.419 `OSCloudSettings: CloudSettings`

parent: `CloudSettings`

Parameter: `instanceId`

Type: string

Description: Unique ID of the instance in OpenStack (the UUID).

Parameter: `secGroupId`

Type: string

Description: Security group name/ID

Parameter: `region`

Type: reference to `OSCloudRegion` or None

Description: The region of the cloud the VM is located in.

Parameter: `flavor`

Type: reference to `OSCloudFlavor` or `None`

Description: Instance Flavor (the type of the VM).

Parameter: `image`

Type: `string`

Description: The name of the cloud image used for creating the VM.

Parameter: `disks`

Type: list of `OSCloudDisk`

Description: Definitions of storage devices of the VM.

Parameter: `availabilityZone`

Type: `string`

Description: Availability zone the VM is supposed to be created in. If left empty, the availability zone will be automatically assigned by the cloud.

Parameter: `externalIP`

Type: `IP`

Description: The external IP address as set by the cloudprovider

Parameter: `useKernelAndInitrdFromTheSoftwareImage`

Type: `boolean`

Description: Make the cloud node's node-installer download the kernel and the initrd from the software image configured for this cloud node and then reboot the cloud node to use those, instead of using the kernel and initrd already present on the node-installer's cloud image.

5.2.420 `OSCloudSwapDisk: OSCloudDisk`

parent: `OSCloudDisk`

5.2.421 `OSCloudVolumeDisk: OSCloudDisk`

parent: `OSCloudDisk`

Parameter: `imageId`

Type: `string`

Description: Image ID to use as source for this disk

Parameter: `snapshotId`

Type: `string`

Description: Snapshot ID to use as source for this disk

Parameter: `volumeId`

Type: `string`

Description: Volume ID to use as source for this disk

5.2.422 `OSService: Entity`

parent: `Entity`

Parameter: `ref_osservice_config_uuid`

Type: UUID

Description: OSServiceConfig

Parameter: name

Type: string

Description: none

Parameter: status

Type: enum

Description: none

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: isRealService

Type: boolean

Description: none

Parameter: sicknessMessage

Type: string

Description: none

5.2.423 OSServiceConfig:Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: monitored

Type: boolean

Description: CMDaemon will periodically check if the service is running

Parameter: autostart

Type: boolean

Description: CMDaemon will restart a failed service

Parameter: runIf

Type: enum

Description: Only run this service in the specified state

Parameter: belongsToRole

Type: boolean

Description: Service is initialized as part of an assigned role

Parameter: addFromRole

Type: boolean

Description: *none*

Parameter: fromGenericRole

Type: boolean

Description: *none*

Parameter: ref_role_uuid

Type: UUID

Description: *none*

Parameter: ref_extra_uuid

Type: UUID

Description: *none*

Parameter: internal

Type: boolean

Description: *none*

Parameter: serviceType

Type: unsigned integer

Description: *none*

Parameter: sicknessCheckScript

Type: string

Description: Script for sickness checking (no script means no sickness checks)

Parameter: sicknessCheckScriptTimeout

Type: unsigned integer

Description: Timeout after which the script is killed

Parameter: sicknessCheckInterval

Type: unsigned integer

Description: Sickness checks interval (rounded up to 30s monitoring interval)

Parameter: scriptTimeout

Type: integer

Description: Service operation timeout

5.2.424 Package: Entity

parent: Entity

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: type

Type: enum

Description: Type of package manager

Parameter: path

Type: string

Description: Path

Parameter: name

Type: string

Description: Name

Parameter: version

Type: string

Description: Version

Parameter: release

Type: string

Description: Release

Parameter: arch

Type: string

Description: Version

Parameter: buildDate

Type: timestamp

Description: Build date

Parameter: installDate

Type: timestamp

Description: Install date

Parameter: size

Type: unsigned integer

Description: Size

Parameter: installed

Type: boolean

Description: Installed

5.2.425 Partition: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: clusterName

Type: string

Description: Cluster name

Parameter: clusterReferenceArchitecture

Type: string

Description: Cluster reference architecture

Parameter: primaryHeadNode

Type: reference to HeadNode

Description: Primary head node

Parameter: failover

Type: CMDaemonFailover

Description: Manage failover setup for this cluster

Parameter: timeZoneSettings

Type: TimeZoneSettings or None

Description: Time zone

Parameter: adminEmail

Type: list of strings

Description: Administrator's email

Parameter: slaveName

Type: string

Description: Default prefix to identify nodes. eg node003 (basename = node)

Parameter: slaveDigits

Type: unsigned integer

Description: Number of digits used to identify nodes. eg node003 (digits = 3)

Parameter: nameServers

Type: list of signed numbers

Description: Name servers

Parameter: nameServersFromDhcp

Type: list of signed numbers

Description: Name servers provided by DHCP, edit the name servers property instead

Parameter: timeServers

Type: list of strings

Description: NTP time servers

Parameter: searchDomains

Type: list of strings

Description: DNS search domains

Parameter: externallyVisibleIp

Type: IP

Description: IP that external sites see when headnode connects

Parameter: externalNetwork

Type: reference to Network

Description: External network

Parameter: defaultCategory

Type: reference to Category

Description: Default category for new nodes

Parameter: archOS

Type: list of ArchOS

Description: Architecture operating system

Parameter: burnConfigs

Type: list of BurnConfig

Description: Burn configurations

Parameter: failoverGroups

Type: list of CMDaemonFailoverGroup

Description: Failover group configurations

Parameter: resourcePools

Type: list of ResourcePool

Description: Resource pools

Parameter: defaultBurnConfig

Type: BurnConfig

Description: Default burn configuration

Parameter: bmcSettings

Type: BMCSettings or None

Description: Configure the baseboard management controller settings

Parameter: snmpSettings

Type: SNMPSettings or None

Description: Configure the cluster wide SNMP settings

Parameter: dpuSettings

Type: DPUSettings or None

Description: Configure the DPU settings

Parameter: ztpSettings

Type: ZTPSettings or None

Description: Configure the ZTP settings

Parameter: `ztpNewSwitchSettings`

Type: `ZTPNewSwitchSettings` or `None`

Description: Configure the ZTP settings

Parameter: `seLinuxSettings`

Type: `SELinuxSettings` or `None`

Description: Configure the SELinux settings

Parameter: `accessSettings`

Type: `AccessSettings` or `None`

Description: Configure the cluster wide Access settings

Parameter: `netQSettings`

Type: `NetQSettings` or `None`

Description: Configure NetQ settings

Parameter: `managementNetwork`

Type: reference to `Network`

Description: Determines what network should be used for management traffic.

Parameter: `notes`

Type: `string`

Description: Administrator notes

Parameter: `provisioningSettings`

Type: `ProvisioningSettings`

Description: Configure the provisioning settings

Parameter: `relayHost`

Type: `string`

Description: SMTP mail relay host

Parameter: `noZeroConf`

Type: `boolean`

Description: Add nozeroconf to network configuration

Parameter: `proxySettings`

Type: `ProxySettings` or `None`

Description: Configure the proxy server settings

Parameter: `fabricConfigurations`

Type: list of `FabricConfiguration`

Description: Cluster wide fabric configuration

Parameter: `autosign`

Type: `enum`

Description: Sign certificates for node installer request according to network settings.

5.2.426 PBSJob: Job

parent: Job

5.2.427 PBSJobQueue: JobQueue

parent: JobQueue

Parameter: queueType

Type: enum

Description: Pbs Pro queue type

Parameter: fromRouteOnly

Type: boolean

Description: Receive jobs from route queues only

Parameter: routeHeldJobs

Type: boolean

Description: Specifies whether jobs in the held state can be routed from this queue

Parameter: routeWaitingJobs

Type: boolean

Description: Specifies whether jobs whose execution_time attribute value is in the future can be routed from this queue

Parameter: routeLifetime

Type: unsigned integer

Description: The maximum time a job is allowed to reside in a routing queue

Parameter: routeRetryTime

Type: unsigned integer

Description: Route retry time in routing queue

Parameter: routes

Type: list of strings

Description: Route of queue path (route_destination parameter in qmgr)

Parameter: defaultQueue

Type: boolean

Description: Specifies the queue which is to accept jobs when no queue is requested

Parameter: minWalltime

Type: string

Description: Minimum runtime of jobs running in a queue

Parameter: maxWalltime

Type: string

Description: Maximum runtime of jobs running in a queue

Parameter: defaultWalltime

Type: string

Description: Default maximum runtime of jobs running in a queue

Parameter: maxQueued

Type: unsigned integer

Description: Maximum number allowed to reside in a queue at any given time (0 is the same as infinite)

Parameter: maxRunning

Type: unsigned integer

Description: Maximum number of jobs allowed to run at any given time (0 is the same as infinite)

Parameter: priority

Type: integer

Description: Priority of a queue against other queues of the same type [-1024; 1024]

Parameter: enabled

Type: boolean

Description: When true, a queue will accept new jobs; when false, a queue is disabled and will not accept jobs

Parameter: started

Type: boolean

Description: Jobs may be scheduled for execution from this queue; when false, a queue is considered stopped

Parameter: aclHostEnable

Type: boolean

Description: When true directs the server to use the acl_hosts access list for the named queue

5.2.428 PBSJobQueueStat: JobQueueStat

parent: JobQueueStat

Parameter: held

Type: unsigned integer

Description: Held jobs

Parameter: waiting

Type: unsigned integer

Description: Waiting jobs

5.2.429 PbsPelog: Entity

parent: Entity

Parameter: enabled

Type: boolean

Description: Enable hook

Parameter: name

Type: string

Description: Hook name in PBS

Parameter: events

Type: list of strings

Description: List of hook events

Parameter: path

Type: string

Description: Fully qualified pathname of a hook script

Parameter: defaultAction

Type: enum

Description: PBS prolog/epilog default action

Parameter: enableParallel

Type: boolean

Description: Enable parallel prologues/epilogues that run on sister nodes

Parameter: verboseUserOutput

Type: boolean

Description: Provide verbose hook output to the user's .o/.e file

Parameter: torqueCompatible

Type: boolean

Description: Make torque compatible

Parameter: order

Type: unsigned integer

Description: Hook order

Parameter: alarm

Type: unsigned integer

Description: Hook alarm time (timeout)

Parameter: debug

Type: boolean

Description: Enable hook debug (in PBS)

5.2.430 PbsProCgroupsSettings: WlmCgroupsSettings

parent: WlmCgroupsSettings

Parameter: jobCgroupTemplate

Type: string

Description: Template for job cgroup path (\$ESCAPE_JOBID will be replaced by systemd-escape of job id)

Parameter: `cgroupPrefix`

Type: `string`

Description: Cgroup prefix that used by PBS when the cgroup is created

Parameter: `enabled`

Type: `boolean`

Description: When set the cgroups hook is enabled (in the hook config: `enabled`)

Parameter: `nvidiaSmi`

Type: `string`

Description: The location of the nvidia-smi command (in the hook config: `nvidia-smi`)

Parameter: `killTimeout`

Type: `unsigned integer`

Description: Maximum number of seconds the hook spends attempting to kill job processes before destroying cgroups (in the hook config: `kill_timeout`)

Parameter: `serverTimeout`

Type: `unsigned integer`

Description: Maximum number of seconds the hook spends attempting to fetch node info from the server (in the hook config: `server_timeout`)

Parameter: `useHyperthreads`

Type: `boolean`

Description: All CPU threads are made available to jobs (in the hook config: `use_hyperthreads`)

Parameter: `ncpusAreCores`

Type: `boolean`

Description: `ncpus` of a vnode is the number of cores, and the hook assigns all threads of each core to a job (in the hook config: `ncpus_are_cores`)

Parameter: `cpuacctEnabled`

Type: `boolean`

Description: Enable `cpuacct` cgroup controller for jobs

Parameter: `cpusetEnabled`

Type: `boolean`

Description: Enable `cpuset` cgroup controller for jobs

Parameter: `devicesEnabled`

Type: `boolean`

Description: Enable `devices` cgroup controller for jobs

Parameter: `devicesAllow`

Type: list of strings

Description: Parameter specifies how access to devices will be controlled

Parameter: `hugetlbEnabled`

Type: boolean

Description: Enable hugetlb cgroup controller for jobs

Parameter: `hugetlbDefault`

Type: unsigned integer

Description: The amount of huge page memory assigned to the cgroup when the job does not request hpmem

Parameter: `hugetlbReservePercent`

Type: unsigned integer

Description: The percentage of available huge page memory (hpmem) that is not to be assigned to jobs

Parameter: `hugetlbReserveAmount`

Type: unsigned integer

Description: An amount of available huge page memory (hpmem) that is not to be assigned to jobs

Parameter: `memoryEnabled`

Type: boolean

Description: Enable memory cgroup controller for jobs

Parameter: `memorySoftLimit`

Type: boolean

Description: If false PBS uses hard memory limits which prevent the processes from ever exceeding their requested memory usage

Parameter: `memoryDefault`

Type: unsigned integer

Description: Amount of memory assigned to the job if it doesn't request any memory

Parameter: `memoryReservePercent`

Type: unsigned integer

Description: The percentage of available physical memory that is not to be assigned to jobs

Parameter: `memoryReserveAmount`

Type: unsigned integer

Description: A specific amount of available physical memory that is not to be assigned to jobs

Parameter: `memswEnabled`

Type: boolean

Description: Enable memsw cgroup controller for jobs

Parameter: `memswDefault`

Type: unsigned integer

Description: Specifies the amount of memory + swap assigned to the job if it doesn't request any memory

Parameter: memswReservePercent

Type: unsigned integer

Description: Percentage of available swap that is not to be assigned to jobs

Parameter: memswReserveAmount

Type: unsigned integer

Description: An amount of available swap that is not to be assigned to jobs

5.2.431 PbsProClientRole: PbsProRole

parent: PbsProRole

Parameter: slots

Type: string

Description: Number of slots available on this node/category

Parameter: queues

Type: list of references to PbsProJobQueue

Description: Queues this node/nodes in this category belongs to

Parameter: allQueues

Type: boolean

Description: When set, the role will provide all available queues. (The queues property will then be ignored.)

Parameter: gpus

Type: unsigned integer

Description: Number of gpus

Parameter: gpuDevices

Type: list of strings

Description: /dev/* available to workload management

Parameter: properties

Type: list of strings

Description: Node properties (a 'pnames' node attribute)

Parameter: IMEX

Type: boolean

Description: Start IMEX daemon from prolog/epilog

Parameter: momSettings

Type: PbsProMomSettings

Description: Submode containing pbs_mom daemon settings

Parameter: commSettings

Type: PbsProCommSettings

Description: Submode containing pbs_comm settings

Parameter: nodeCustomizations

Type: list of WlmNodeCustomizationEntry

Description: PBS Pro node custom properties

5.2.432 PbsProCommSettings: Entity

parent: Entity

Parameter: commRouters

Type: list of strings

Description: Tells a pbs_comm where to find its fellow communication daemons (PBS_COMM_ROUTERS parameter in pbs.conf)

Parameter: commThreads

Type: unsigned integer

Description: Tells pbs_comm how many threads to start (PBS_COMM_THREADS parameter in pbs.conf)

Parameter: startComm

Type: boolean

Description: Configure pbs_com daemon start (PBS_START_COMM parameter in pbs.conf)

5.2.433 PbsProJob: PBSJob

parent: PBSJob

5.2.434 PbsProJobQueue: PBSJobQueue

parent: PBSJobQueue

5.2.435 PbsProJobQueueStat: PBSJobQueueStat

parent: PBSJobQueueStat

5.2.436 PbsProMomSettings: Entity

parent: Entity

Parameter: outputHostname

Type: string

Description: Host to which all job standard output and standard error are delivered (PBS_OUTPUT_HOST_NAME parameter in pbs.conf)

Parameter: leafRouters

Type: list of strings

Description: Location of endpoint's pbs_comm daemon (PBS_LEAF_ROUTERS parameter in pbs.conf)

Parameter: leafName

Type: string

Description: Leaf name (PBS_LEAF_NAME parameter in pbs.conf)

Parameter: leafManagementFqdn

Type: boolean

Description: Leaf name in pbs.conf is appended with FQDN from management network

Parameter: startMom

Type: boolean

Description: Configure pbs_mom daemon start (PBS_START_MOM parameter in pbs.conf)

Parameter: spool

Type: string

Description: PBS Pro mom spool directory

5.2.437 PbsProRole: Role

parent: Role

Parameter: wlmCluster

Type: reference to PbsProWlmCluster

Description: WLM cluster link to this WLM role

5.2.438 PbsProServerRole: PbsProRole

parent: PbsProRole

Parameter: externalServer

Type: boolean

Description: PBS Pro server daemons are running on some external machine

Parameter: commSettings

Type: PbsProCommSettings

Description: Submode containing pbs_comm settings

5.2.439 PbsProSubmitRole: WlmSubmitRole

parent: WlmSubmitRole

Parameter: pbsProWlmClusters

Type: list of references to PbsProWlmCluster

Description: List of PbsPro clusters which the role belongs to

5.2.440 PbsProWlmCluster: WlmCluster

parent: WlmCluster

Parameter: version

Type: string

Description: Major PBS Pro version

Parameter: placeholders

Type: list of JobQueuePlaceholder

Description: Job queue node placeholders mode

Parameter: cgroups

Type: PbsProCgroupsSettings

Description: Submode containing PBS Pro related cgroups settings

Parameter: `pelogs`

Type: list of `PbsPelog`

Description: Submode containing a list of PBS Pro related prolog and epilog (pelog) hook settings

Parameter: `enableJobHistory`

Type: boolean

Description: Keep all job attribute information in PBS Pro

Parameter: `jobHistoryDuration`

Type: string

Description: Specifies the length of time that PBS will keep each job's history

Parameter: `prefix`

Type: string

Description: PBS Pro installation directory

Parameter: `spool`

Type: string

Description: PBS Pro server spool directory

Parameter: `subType`

Type: enum

Description: PBS Pro subtype

Parameter: `flatUid`

Type: boolean

Description: Specifies whether a username at the submission host must be the same as the one at the server host

Parameter: `maxRunning`

Type: unsigned integer

Description: Maximum number of jobs allowed to run at any given time (0 is the same as infinite)

5.2.441 `PDUPort: Entity`

parent: `Entity`

Parameter: `pdu`

Type: reference to `PowerDistributionUnit`

Description: Pointer to a power distribution unit

Parameter: `prt`

Type: unsigned integer

Description: Port number on the power distribution unit

5.2.442 `PhysicalNode: ComputeNode`**parent:** `ComputeNode`**5.2.443** `PingResult: Entity`**parent:** `Entity`**Parameter:** `source`**Type:** `UUID`**Description:** `Source`**Parameter:** `destination`**Type:** `UUID`**Description:** `Destination`**Parameter:** `result`**Type:** `enum`**Description:** `Result of the ping operation`**Parameter:** `latency`**Type:** `float`**Description:** `Round trip latency`**Parameter:** `sequenceId`**Type:** `unsigned integer`**Description:** `Sequence ID`**5.2.444** `PingStatistics: Entity`**parent:** `Entity`**Parameter:** `totalOk`**Type:** `unsigned integer`**Description:** `Total number of pings that returned OK`**Parameter:** `totalError`**Type:** `unsigned integer`**Description:** `Total number of pings that returned error`**Parameter:** `totalFailed`**Type:** `unsigned integer`**Description:** `Total number of pings that returned failed`**Parameter:** `totalTimeout`**Type:** `unsigned integer`**Description:** `Total number of pings that returned timeout`**Parameter:** `totalNoAddress`**Type:** `unsigned integer`

Description: Total number of pings had no address

Parameter: totalUnreachable

Type: unsigned integer

Description: Total number of pings that returned unreachable

Parameter: total

Type: unsigned integer

Description: Total number of pings done

Parameter: pairInformation

Type: list of PingStatisticsPairInformation

Description: Ping pair information statistics

Parameter: sourceInformation

Type: list of PingStatisticsSourceInformation

Description: Ping source information statistics

Parameter: globalInformation

Type: PingStatisticsGlobalInformation

Description: Ping global information statistics

Parameter: results

Type: list of PingResult

Description: Raw ping results

5.2.445 PingStatisticsGlobalInformation: Entity

parent: Entity

Parameter: count

Type: unsigned integer

Description: none

Parameter: average

Type: float

Description: none

Parameter: minimum

Type: float

Description: none

Parameter: maximum

Type: float

Description: none

Parameter: uniformity

Type: float

Description: *none*

5.2.446 PingStatisticsPairInformation: Entity

parent: Entity

Parameter: *source*

Type: UUID

Description: *none*

Parameter: *destination*

Type: UUID

Description: *none*

Parameter: *count*

Type: unsigned integer

Description: *none*

Parameter: *average*

Type: float

Description: *none*

Parameter: *minimum*

Type: float

Description: *none*

Parameter: *maximum*

Type: float

Description: *none*

Parameter: *uniformity*

Type: float

Description: *none*

5.2.447 PingStatisticsSourceInformation: Entity

parent: Entity

Parameter: *source*

Type: UUID

Description: *none*

Parameter: *count*

Type: unsigned integer

Description: *none*

Parameter: *average*

Type: float

Description: *none*

Parameter: minimum

Type: float

Description: none

Parameter: maximum

Type: float

Description: none

Parameter: uniformity

Type: float

Description: none

5.2.448 PowerDistributionUnit: Device

parent: Device

Parameter: ip

Type: IP

Description: IP address

Parameter: network

Type: reference to Network or None

Description: Network to which this unit is connected

Parameter: model

Type: string

Description: PowerDistributionUnit model name

Parameter: ports

Type: integer

Description: Number of outlets

Parameter: banks

Type: integer

Description: Number of banks

Parameter: phases

Type: integer

Description: Number of phases

Parameter: snmpSettings

Type: SNMPSettings or None

Description: Configure the cluster wide SNMP settings

Parameter: firmware

Type: string

Description: Firmware revision

Parameter: controlScript

Type: string

Description: none

Parameter: controlScriptTimeout

Type: unsigned integer

Description: none

5.2.449 PowerOperation: Entity

parent: Entity

Parameter: devices

Type: list of unsigned numbers

Description: Devices

Parameter: pdus

Type: list of unsigned numbers

Description: A list of (PDU, port) pairs

Parameter: pdu_ports

Type: list of unsigned numbers

Description: A list of (PDU, port) pairs

Parameter: session_uuid

Type: UUID

Description: Session

Parameter: force

Type: boolean

Description: Set to true to also do power operation on closed devices

Parameter: delay

Type: unsigned integer

Description: Delay between sequential operations in milliseconds

Parameter: deviceDelay

Type: list of unsigned numbers

Description: Individual device delay in milliseconds

Parameter: headIndex

Type: unsigned integer

Description: Should be 0

Parameter: operation

Type: enum

Description: Operation to be performed

Parameter: gpus

Type: list of unsigned numbers

Description: GPUs

Parameter: retryCount

Type: unsigned integer

Description: Number of times to retry on failure

Parameter: retryDelay

Type: unsigned integer

Description: Delay between consecutive tries in milliseconds

5.2.450 PowerOperationHistory: Entity

parent: Entity

Parameter: ref_device_uuid

Type: UUID

Description: Device

Parameter: executionTime

Type: unsigned integer

Description: Execution time in milliseconds after epoch

Parameter: operation

Type: enum

Description: Operation

Parameter: success

Type: boolean

Description: Success

5.2.451 PowerOperationStatus: Entity

parent: Entity

Parameter: state

Type: enum

Description: State of the operation

Parameter: operation

Type: enum

Description: Operation to be performed

Parameter: executionTime

Type: timestamp

Description: Execution time

Parameter: info

Type: string

Description: Extra information about the power operation

Parameter: `retries`

Type: unsigned integer

Description: Number of retries

Parameter: `devices`

Type: list of unsigned numbers

Description: Devices

Parameter: `index`

Type: list of unsigned numbers

Description: Indexes of power operation

Parameter: `gpus`

Type: list of unsigned numbers

Description: GPUs

5.2.452 `PowerStatus: Entity`

parent: Entity

Parameter: `device`

Type: UUID

Description: Device

Parameter: `host`

Type: UUID

Description: *none*

Parameter: `powerDistributionUnit`

Type: UUID

Description: *none*

Parameter: `gpu`

Type: integer

Description: *none*

Parameter: `prt`

Type: unsigned integer

Description: *none*

Parameter: `name`

Type: string

Description: *none*

Parameter: `state`

Type: enum

Description: *none*

Parameter: `msg`

Type: string

Description: *none*

Parameter: extendedMsg

Type: string

Description: *none*

Parameter: indexes

Type: list of unsigned numbers

Description: *none*

Parameter: tracker

Type: unsigned integer

Description: *none*

Parameter: retries

Type: unsigned integer

Description: *none*

5.2.453 PreJobOutput: Entity

parent: Entity

Parameter: measurable

Type: UUID

Description: *none*

Parameter: value

Type: float

Description: *none*

Parameter: output

Type: string

Description: *none*

Parameter: failed

Type: boolean

Description: *none*

Parameter: reschedule

Type: boolean

Description: *none*

5.2.454 PreJobResult: Entity

parent: Entity

Parameter: hostname

Type: string

Description: *none*

Parameter: `node_uuid`

Type: UUID

Description: Node

Parameter: `output`

Type: list of PreJobOutput

Description: *none*

5.2.455 Process: Entity

parent: Entity

Parameter: `ref_node_uuid`

Type: UUID

Description: Node

Parameter: `pid`

Type: integer

Description: Process ID

Parameter: `ppid`

Type: integer

Description: Parent PID

Parameter: `uid`

Type: integer

Description: Owner UID

Parameter: `gid`

Type: integer

Description: Process' group ID

Parameter: `state`

Type: string

Description: Process' state

Parameter: `cmd`

Type: string

Description: The command name

Parameter: `size`

Type: unsigned integer

Description: Virtual memory size

Parameter: `rss`

Type: unsigned integer

Description: Resident memory size

Parameter: nbthreads

Type: unsigned integer

Description: Number of threads spawned

Parameter: nbfiledescriptors

Type: unsigned integer

Description: Number of held file descriptors

Parameter: cputime

Type: unsigned integer

Description: CPU time

Parameter: cpuuse

Type: float

Description: CPU usage

Parameter: username

Type: string

Description: Owner name

Parameter: groupname

Type: string

Description: Group name

5.2.456 Processor: Entity

parent: Entity

Parameter: IDs

Type: list of unsigned numbers

Description: ID

Parameter: physicalIDs

Type: list of unsigned numbers

Description: Physical ID

Parameter: coreIDs

Type: list of unsigned numbers

Description: Core ID

Parameter: vendor

Type: string

Description: Vendor

Parameter: model

Type: string

Description: Model

Parameter: cores

Type: unsigned integer

Description: Cores

Parameter: speed

Type: float

Description: Speed

Parameter: cacheSize

Type: unsigned integer

Description: Cache size

Parameter: bogomips

Type: float

Description: Bogomips

5.2.457 Profile: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: tokens

Type: list of strings

Description: Tokens

Parameter: accessServices

Type: list of strings

Description: Services

Parameter: nonuser

Type: boolean

Description: True if profile not assignable to users.

5.2.458 ProgramRunnerInput: Entity

parent: Entity

Parameter: user

Type: string

Description: none

Parameter: startInShell

Type: boolean

Description: none

Parameter: cmd
Type: string
Description: none

Parameter: info
Type: string
Description: none

Parameter: args
Type: list of strings
Description: none

Parameter: env
Type: list of strings
Description: none

Parameter: datacin
Type: string
Description: none

Parameter: mergeCoutCerr
Type: boolean
Description: none

Parameter: maxruntime
Type: unsigned integer
Description: none

Parameter: updateinterval
Type: unsigned integer
Description: none

Parameter: priority
Type: integer
Description: none

Parameter: tracker
Type: UUID
Description: none

Parameter: logger
Type: enum
Description: none

5.2.459 ProgramRunnerKill: Entity
parent: Entity

Parameter: node

Type: UUID

Description: Node key

Parameter: running

Type: integer

Description: Running

Parameter: trackers

Type: list of unsigned numbers

Description: Tackers

Parameter: results

Type: list of signed numbers

Description: results

5.2.460 ProgramRunnerOutput: Entity

parent: Entity

Parameter: node

Type: UUID

Description: none

Parameter: datacout

Type: string

Description: none

Parameter: datacerr

Type: string

Description: none

Parameter: exitcode

Type: integer

Description: none

Parameter: signal

Type: integer

Description: none

Parameter: pid

Type: integer

Description: none

Parameter: runtime

Type: unsigned integer

Description: none

Parameter: state

Type: unsigned integer

Description: *none*

5.2.461 ProgramRunnerStatus: Entity

parent: Entity

Parameter: startTime

Type: timestamp

Description: *none*

Parameter: runtime

Type: unsigned integer

Description: *none*

Parameter: session_uuid

Type: UUID

Description: *none*

Parameter: running

Type: integer

Description: *none*

Parameter: unknown

Type: integer

Description: *none*

Parameter: internal

Type: boolean

Description: *none*

Parameter: nodes

Type: list of unsigned numbers

Description: *none*

Parameter: state

Type: list of unsigned numbers

Description: *none*

Parameter: input

Type: ProgramRunnerInput

Description: *none*

5.2.462 ProjectManager: Entity

parent: Entity

Parameter: users

Type: list of strings

Description: List of users managed

Parameter: `accounts`

Type: list of strings

Description: List of accounts managed

Parameter: `op`

Type: enum

Description: Job needs to belong to one of the users and/or accounts

5.2.463 `PrometheusQuery: Entity`

parent: Entity

Parameter: `name`

Type: string

Description: Name

Parameter: `alias`

Type: string

Description: Alternative name

Parameter: `query`

Type: string

Description: PromQL Query

Parameter: `typeClass`

Type: string

Description: Type class, slash(/) separated for levels

Parameter: `description`

Type: string

Description: Description

Parameter: `notes`

Type: string

Description: Notes

Parameter: `startTime`

Type: string

Description: Default query start time

Parameter: `endTime`

Type: string

Description: Default end start time

Parameter: `interval`

Type: float

Description: Interval

Parameter: `access`

Type: enum

Description: User access control

Parameter: unit

Type: string

Description: Unit of measure for the query results

Parameter: price

Type: float

Description: Optional price associated with the query results per unit

Parameter: currency

Type: string

Description: Currency

Parameter: preference

Type: unsigned integer

Description: The query with the highest preference be shown by default

Parameter: drilldown

Type: list of PrometheusQueryDrilldown

Description: Manage the drilldown queries

5.2.464 PrometheusQueryDrilldown: Entity

parent: Entity

Parameter: name

Type: string

Description: The name of the drill down

Parameter: parameters

Type: list of strings

Description: Parameters to be passed to the drill down query

Parameter: query

Type: reference to PrometheusQuery or None

Description: Query to execute

5.2.465 ProvisioningNodeStatus: Entity

parent: Entity

Parameter: ref_node_uuid

Type: UUID

Description: Provisioning node

Parameter: ref_image_uuids

Type: list of unsigned numbers

Description: Software images

Parameter: `ref_category_uuids`

Type: list of unsigned numbers

Description: Categories

Parameter: `ref_nodegroup_uuids`

Type: list of unsigned numbers

Description: Node groups

Parameter: `ref_rack_uuids`

Type: list of unsigned numbers

Description: Racks

Parameter: `slotsCapacity`

Type: unsigned integer

Description: Number of provisioning requests this node can handle in parallel.

Parameter: `slotsUsed`

Type: unsigned integer

Description: Number of provisioning requests currently being handled by this node.

Parameter: `drained`

Type: boolean

Description: Drained and not available for future request

Parameter: `upToDate`

Type: list of booleans

Description: *none*

5.2.466 `ProvisioningProcessorJob`: Entity

parent: Entity

Parameter: `job_uuid`

Type: UUID

Description: Internal provisioning system job UUID.

Parameter: `request_uuid`

Type: UUID

Description: Provisioning request UUID.

Parameter: `source`

Type: reference to Node

Description: Source node.

Parameter: `sourcePath`

Type: string

Description: Path on the source node.

Parameter: `destination`

Type: reference to Node

Description: Destination node.

Parameter: `destinationPath`

Type: string

Description: Path on the destination node.

Parameter: `isFromNodeInstaller`

Type: boolean

Description: Set if the request came from the node-installer.

Parameter: `isBackupFromBackup`

Type: boolean

Description: Set if the request came a backup of a backup.

Parameter: `userName`

Type: string

Description: Rsync username.

Parameter: `password`

Type: string

Description: Rsync password.

Parameter: `rsyncdPort`

Type: unsigned integer

Description: Rsync port.

Parameter: `includelist`

Type: string

Description: Rsync include list.

Parameter: `excludelist`

Type: string

Description: Rsync exclude list.

Parameter: `dryrun`

Type: boolean

Description: If set, a dry run will be performed, no data is written.

Parameter: `syncMode`

Type: unsigned integer

Description: Sync mode.

Parameter: `state`

Type: unsigned integer

Description: Job state.

Parameter: errorMessage

Type: string

Description: Error message.

Parameter: errorDetails

Type: string

Description: Error details.

Parameter: fspart

Type: reference to FSPart

Description: FSPart

Parameter: index

Type: unsigned integer

Description: Index

5.2.467 ProvisioningRequestStatus: Entity

parent: Entity

Parameter: request_uuids

Type: list of unsigned numbers

Description: Provisioning request UUIDs.

Parameter: sourceNode

Type: UUID

Description: Source node handling the provisioning request.

Parameter: sourcePath

Type: string

Description: Path on the source node.

Parameter: destinationNode

Type: UUID

Description: Destination node for the provisioning request.

Parameter: destinationPath

Type: string

Description: Path on the destination node.

Parameter: dryRun

Type: boolean

Description: In dry-run mode no data is actually written. See provisioning log for results.

Parameter: syncMode

Type: unsigned integer

Description: Sync mode used for the provisioning request.

Parameter: `state`

Type: unsigned integer

Description: State of the provisioning request.

Parameter: `errorMessage`

Type: string

Description: Error message.

Parameter: `errorDetails`

Type: string

Description: Detailed error message.

Parameter: `jobFailureCounter`

Type: unsigned integer

Description: Number of times the provisioning job has failed.

Parameter: `isFromNodeInstaller`

Type: boolean

Description: Set if the request came from the node-installer.

Parameter: `requesterSessions`

Type: list of unsigned numbers

Description: *none*

Parameter: `schedulerInfo`

Type: list of strings

Description: Details on how the provisioning request was scheduled.

5.2.468 **ProvisioningRole: Role**

parent: Role

Parameter: `maxProvisioningNodes`

Type: unsigned integer

Description: Maximum number of nodes that can be provisioned in parallel

Parameter: `loadWeight`

Type: float

Description: Load weight factor, higher factor will reduce the virtual load on the node and make it be used less. Value will be set to 1 if defined lower as lower than 1.

Parameter: `localImages`

Type: list of references to SoftwareImage

Description: List of software images provided from local disk

Parameter: `includeRevisionsOfLocalImages`

Type: boolean

Description: Include revisions of local images

Parameter: `sharedImages`

Type: list of references to `SoftwareImage`

Description: List of software images provided from shared storage

Parameter: `allImages`

Type: enum

Description: When set, the role will provide all available images. (The images property will then be ignored.)

Parameter: `nodegroups`

Type: list of references to `NodeGroup`

Description: List of node groups for which to provide images

Parameter: `categories`

Type: list of references to `Category`

Description: List of categories for which to provide images

Parameter: `racks`

Type: list of references to `Rack`

Description: List of racks for which to provide images

Parameter: `localProvisioning`

Type: boolean

Description: Speeds up initial provisioning of cloud directors and cloud provisioning nodes. When enabled, if a software image is used as the rootfs of the provisioning node and is also to be used by that node to provision other cloud nodes, during the initial FULL install that image will be transferred only once to the provisioning node, instead of twice.

5.2.469 `ProvisioningSettings`: Entity

parent: Entity

Parameter: `dirtyAutoUpdateTimeout`

Type: unsigned integer

Description: Delay after which a provisioning node is considered out of date and automatically updated when needed (0 to disable automatic updates)

Parameter: `autoUpdatePeriod`

Type: unsigned integer

Description: Period after which all provisioning nodes are automatically updated (0 to disable automatic updates)

Parameter: `noRestartRequiredPeriod`

Type: unsigned integer

Description: Period in which a second request doesn't require a restart of a recently started rsync

Parameter: `minimalLoadForOffload`

Type: float

Description: Minimal provisioning load on the active head node before which dirty provisioning nodes are updated

Parameter: headNodeLoadMultiplier

Type: float

Description: Load multiplier to reduce the work for the head node and offload more to the provisioning nodes

Parameter: useGNSSLocationData

Type: boolean

Description: Use GNSS location data where available to find and prefer the closest provisioning node

5.2.470 ProvisioningStatus: Entity

parent: Entity

Parameter: provisioningRequestStatusList

Type: list of ProvisioningRequestStatus

Description: none

Parameter: provisioningNodeStatusList

Type: list of ProvisioningNodeStatus

Description: none

5.2.471 ProxySettings: Entity

parent: Entity

Parameter: proxyHttp

Type: string

Description: HTTP proxy address which will be used for the node connections to HTTP resources

Parameter: proxyHttpUser

Type: string

Description: HTTP proxy username for authentication

Parameter: proxyHttpPass

Type: string

Description: HTTP proxy password for authentication

Parameter: proxyHttps

Type: string

Description: HTTPS proxy address which will be used for the node connections to HTTPS resources

Parameter: proxyHttpsUser

Type: string

Description: HTTPS proxy username for authentication

Parameter: proxyHttpsPass

Type: string

Description: HTTPS proxy password for authentication

Parameter: proxyFtp

Type: string

Description: FTP proxy address which will be used for the node connections to FTP resources

Parameter: proxyFtpUser

Type: string

Description: FTP proxy username for authentication

Parameter: proxyFtpPass

Type: string

Description: FTP proxy password for authentication

Parameter: noProxy

Type: list of strings

Description: Hosts to be accessed without proxy

5.2.472 Rack: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: room

Type: string

Description: Name of the room

Parameter: xCoordinate

Type: unsigned integer

Description: Position in the room

Parameter: yCoordinate

Type: unsigned integer

Description: Position in the room

Parameter: height

Type: unsigned integer

Description: Height

Parameter: width

Type: unsigned integer

Description: Width

Parameter: depth

Type: unsigned integer

Description: Depth

Parameter: angle

Type: unsigned integer

Description: Angle of the rack, 90 face right, 180 face backwards, 270 face left

Parameter: inverted

Type: boolean

Description: Inverted racks have position 1 at the bottom

Parameter: notes

Type: string

Description: Administrator notes

5.2.473 RackPosition: Entity

parent: Entity

Parameter: rack

Type: reference to Rack

Description: Name of the rack in which the device resides

Parameter: position

Type: unsigned integer

Description: Position of the node in the rack, top is 1

Parameter: height

Type: unsigned integer

Description: Height of the node

5.2.474 RackSensor: Device

parent: Device

Parameter: ip

Type: IP

Description: Ip address

Parameter: network

Type: reference to Network or None

Description: Network to which this switch is connected

Parameter: model

Type: string

Description: RackSensor model name

Parameter: sensors

Type: list of Sensor

Description: Sensors in the rackmon kit

Parameter: `snmpSettings`

Type: `SNMPSettings` or `None`

Description: Configure the cluster wide SNMP settings

5.2.475 `RadosGatewayRole: Role`

parent: `Role`

Parameter: `serverRoot`

Type: `string`

Description: Fast CGI server root path

Parameter: `serverSocket`

Type: `string`

Description: Fast CGI server socket

Parameter: `serverPort`

Type: unsigned integer

Description: Gateway port

Parameter: `serverScript`

Type: `string`

Description: Fast CGI server script content

Parameter: `module`

Type: `string`

Description: Apache fastcgi module file name

Parameter: `nssDbPath`

Type: `string`

Description: Path to NSS database directory

5.2.476 `RemoteNodeInstallerInteraction: Entity`

parent: `Entity`

Parameter: `type`

Type: `enum`

Description: `Type`

Parameter: `node`

Type: reference to `ComputeNode`

Description: The node requesting interaction

Parameter: `description`

Type: `string`

Description: The description of the interaction

Parameter: `message`

Type: `string`

Description: The message send back via the manager

Parameter: payload

Type: string

Description: The resulting payload for the interaction

Parameter: firstSeen

Type: unsigned integer

Description: The first time this interaction was requested

Parameter: lastSeen

Type: unsigned integer

Description: The last time this interaction was requested

Parameter: wasConfirmed

Type: boolean

Description: Whether the interaction has been confirmed

Parameter: wasDenied

Type: boolean

Description: Whether the interaction has been denied (rejected)

Parameter: invalid

Type: boolean

Description: Whether the interaction was found to be invalid

Parameter: force

Type: boolean

Description: Flag to indicate a forced passphrase change

Parameter: reset

Type: boolean

Description: Flag to indicate a custom passphrase should be reset to blank

5.2.477 RemoteSetupExecution: Entity

parent: Entity

Parameter: id

Type: integer

Description: A unique identified of the remote cm-*-setup execution.

Parameter: inputConfig

Type: string

Description: cm-*-setup yaml input configuration file (used with '-c' flag).

Parameter: exitCode

Type: integer

Description: The return exit code from cm-setup (once the execution has been completed).

Parameter: signal

Type: integer

Description: Number identifying the signal which interrupted the execution.

Parameter: datacout

Type: list of strings

Description: Data which was emitted on stdout from cm-*-setup.

5.2.478 ReportQuery: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: query

Type: string

Description: Report query

Parameter: description

Type: string

Description: Description

Parameter: notes

Type: string

Description: Notes

Parameter: interval

Type: float

Description: Interval

5.2.479 ResourcePool: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: nodes

Type: list of references to Node

Description: List of nodes who share the resources

Parameter: configurationOverlay

Type: reference to ConfigurationOverlay

Description: Configuration overlay which defines the nodes that share the resources

Parameter: `priority`

Type: list of floating point numbers

Description: Distribution priorities for the nodes

Parameter: `hostname`

Type: string

Description: Hostname all IP resources will point to

Parameter: `resources`

Type: list of BasicResource

Description: Resources to be divided among the given nodes

Parameter: `waitTime`

Type: unsigned integer

Description: How long to wait after a node goes down before migrating it's resources

Parameter: `disabled`

Type: boolean

Description: Disabled the entire resource pool

Parameter: `generateDNSZone`

Type: enum

Description: Specify which DNS zones should be written

5.2.480 ResourcePoolStatus: Entity

parent: Entity

Parameter: `nodes`

Type: list of unsigned numbers

Description: Nodes

Parameter: `nodeStatus`

Type: list of unsigned numbers

Description: Node status

Parameter: `resources`

Type: list of unsigned numbers

Description: Resources

Parameter: `resourceStatus`

Type: list of unsigned numbers

Description: Resource status

Parameter: `resourceMessages`

Type: list of strings

Description: Resource message

5.2.481 Role: Entity**parent:** Entity**Parameter:** name**Type:** string**Description:** Name**Parameter:** addServices**Type:** boolean**Description:** Add services to nodes which belong to this node. Be careful setting this to false.**5.2.482** Route: Entity**parent:** Entity**Parameter:** ref_node_uuid**Type:** UUID**Description:** Node**Parameter:** destination**Type:** IP**Description:** The destination network or destination host.**Parameter:** gateway**Type:** IP**Description:** Gateway**Parameter:** netmask**Type:** IP**Description:** The netmask for the destination**Parameter:** flags**Type:** string**Description:** Flags**Parameter:** metric**Type:** unsigned integer**Description:** The 'distance' to the target (usually counted in hops)**Parameter:** ref**Type:** unsigned integer**Description:** Number of references to this route**Parameter:** use**Type:** unsigned integer**Description:** Number of lookups for the route**Parameter:** interface**Type:** string

Description: *none*

5.2.483 ScaleAdvancedSettings: Entity

parent: Entity

Parameter: debug2

Type: boolean

Description: Print very low level debug messages to the log

Parameter: maxThreads

Type: unsigned integer

Description: Maximum number of threads for sequential operations

Parameter: powerOperationTimeout

Type: unsigned integer

Description: Power Operation Timeout (in seconds)

Parameter: connectionRetryInterval

Type: unsigned integer

Description: Connection to CMDaemon retry interval (in seconds)

Parameter: logFile

Type: string

Description: Path to cm-scale logs file

Parameter: pinQueues

Type: boolean

Description: Pin workload to its queue nodes

Parameter: mixLocations

Type: boolean

Description: Allow to map workload to different locations (for example, cloud and local)

Parameter: failedNodeIsHealthy

Type: boolean

Description: Do not start a new node instead of a failed one

Parameter: azureDiskAccountNodes

Type: unsigned integer

Description: Number of nodes that can share the same Azure disk account

Parameter: azureDiskImageName

Type: string

Description: Image name for Azure disks

Parameter: azureDiskContainerName

Type: string

Description: Container name for Azure disks

Parameter: `azureDiskAccountPrefix`

Type: `string`

Description: Prefix for randomly generated Azure disk account names

Parameter: `nodeSelection`

Type: `enum`

Description: Type of node selection used by Auto Scaler

Parameter: `nodeSelectionUptimePeriod`

Type: `unsigned integer`

Description: Period of time in which Auto Scaler calculates total uptime for the nodes during selection

Parameter: `options`

Type: `list of strings`

Description: Additional parameters that will be passed to cm-scale daemon

5.2.484 `ScaleDynamicNodesProvider: ScaleResourceProvider`

parent: `ScaleResourceProvider`

Parameter: `templateNode`

Type: `reference to Node`

Description: Template node

Parameter: `nodeRange`

Type: `string`

Description: Node range

Parameter: `networkInterface`

Type: `string`

Description: Which node network interface will be changed on cloning (incremented)

Parameter: `startTemplateNode`

Type: `boolean`

Description: Should template node be started automatically

Parameter: `stopTemplateNode`

Type: `boolean`

Description: Should template node be stopped automatically

Parameter: `removeNodes`

Type: `boolean`

Description: Should nodes be removed from Bright Cluster Manager configuration upon the node termination

Parameter: `leaveFailedNodes`

Type: `boolean`

Description: Failed nodes will not be touched in order to allow administrator to investigate why they were failed

Parameter: `neverTerminate`

Type: unsigned integer

Description: Number of nodes that cm-scale powers off and allows to remain, instead of terminating

Parameter: `neverTerminateNodes`

Type: list of references to Node

Description: List of particular nodes that cm-scale powers off and allows to remain, instead of terminating

5.2.485 `ScaleEngine: Entity`

parent: Entity

Parameter: `name`

Type: string

Description: HPC workload engine name

Parameter: `trackers`

Type: list of ScaleTracker

Description: Workload trackers

Parameter: `workloadsPerNode`

Type: unsigned integer

Description: Number of workloads that can be scheduled to the same node at the same time

Parameter: `priority`

Type: unsigned integer

Description: Workload engine priority

Parameter: `ageFactor`

Type: float

Description: Fairsharing coefficient for workload age significance

Parameter: `engineFactor`

Type: float

Description: Fairsharing coefficient for engine priority significance

Parameter: `externalPriorityFactor`

Type: float

Description: Fairsharing coefficient for external priority significance

Parameter: `maxNodes`

Type: unsigned integer

Description: Allowed running nodes limit

Parameter: `notes`

Type: string

Description: Engine related notes

Parameter: options

Type: list of strings

Description: Additional engine related parameters that will be passed to cm-scale daemon

5.2.486 ScaleGenericEngine: ScaleEngine

parent: ScaleEngine

5.2.487 ScaleGenericTracker: ScaleTracker

parent: ScaleTracker

Parameter: handler

Type: string

Description: Full path to python module that produces workload entities for cm-scale

5.2.488 ScaleHpcEngine: ScaleEngine

parent: ScaleEngine

Parameter: wlmCluster

Type: reference to WlmCluster

Description: WLM cluster that will be used by cm-scale

5.2.489 ScaleHpcQueueTracker: ScaleTracker

parent: ScaleTracker

Parameter: queue

Type: string

Description: Tracking job queue

5.2.490 ScaleKubeEngine: ScaleEngine

parent: ScaleEngine

Parameter: cluster

Type: reference to KubeCluster

Description: Kubernetes cluster which pods will be tracked

Parameter: cpuBusyThreshold

Type: float

Description: CPU load % that defines if node is too busy for new pods

Parameter: memoryBusyThreshold

Type: float

Description: Memory load % that defines if node is too busy for new pods

5.2.491 ScaleKubeNamespaceTracker: ScaleTracker

parent: ScaleTracker

Parameter: controllerNamespace

Type: string
Description: Tracking Kubernetes namespace name

Parameter: object
Type: enum
Description: Type of Kubernetes objects to track

5.2.492 ScalePendingWorkload: Entity

parent: Entity

Parameter: workloadId
Type: string
Description: Workload that waits for nodes

Parameter: nodes
Type: list of references to Node
Description: List of managed nodes

5.2.493 ScaleResourceProvider: Entity

parent: Entity

Parameter: name
Type: string
Description: Resource provider name

Parameter: enabled
Type: boolean
Description: Resource provider is currently enabled

Parameter: priority
Type: unsigned integer
Description: Node provider priority

Parameter: wholeTime
Type: unsigned integer
Description: A compute node running time (in minutes) before it is stopped if no workload requires it

Parameter: stoppingAllowancePeriod
Type: unsigned integer
Description: A time (in minutes) just before the end of the wholeTime period prior to which all power off (or terminate) operations must be started

Parameter: keepRunning
Type: string
Description: Nodes that should not be stopped or terminated even if they are unused (range format)

Parameter: extraNodes

Type: list of strings

Description: Nodes that should be started before regular nodes

Parameter: `extraNodeIdleTime`

Type: unsigned integer

Description: Time, in seconds, that extra nodes can remain unused (after this time they are stopped)

Parameter: `extraNodeStart`

Type: boolean

Description: Automatically start extra node before the first compute node is started

Parameter: `extraNodeStop`

Type: boolean

Description: Automatically stop extra node after the last compute node stops

Parameter: `allocationProlog`

Type: string

Description: Script that is executed when a node is allocated to a workload

Parameter: `allocationEpilog`

Type: string

Description: Script that is executed when a node is deallocated

Parameter: `allocationScriptsTimeout`

Type: unsigned integer

Description: Allocation scripts timeout in seconds

Parameter: `defaultResources`

Type: list of strings

Description: List of default resources in format [name=value]

Parameter: `shutdownEnabled`

Type: boolean

Description: Shutdown nodes instead of just power off, and wait until a set timeout before doing a hard power off

Parameter: `shutdownTimeout`

Type: unsigned integer

Description: Shutdown timeout before powering off

Parameter: `longStartingNodeAction`

Type: enum

Description: Action applied to nodes that start for too long

Parameter: `longStartingNodeTimeout`

Type: unsigned integer

Description: How long Auto Scaler should wait before the action is applied for long starting nodes

Parameter: options

Type: list of strings

Description: Additional resource provider related parameters that will be passed to cm-scale daemon

5.2.494 ScaleServerRole: Role

parent: Role

Parameter: engines

Type: list of ScaleEngine

Description: Submode containing workload engines settings

Parameter: resourceProviders

Type: list of ScaleResourceProvider

Description: List of resource providers

Parameter: dryRun

Type: boolean

Description: Run in dry run mode

Parameter: debug

Type: boolean

Description: Print debug messages to the log

Parameter: runInterval

Type: unsigned integer

Description: Frequency of cm-scale decision making (in seconds)

Parameter: advancedSettings

Type: ScaleAdvancedSettings

Description: Submode containing advanced settings

5.2.495 ScaleStaticNodesProvider: ScaleResourceProvider

parent: ScaleResourceProvider

Parameter: nodes

Type: list of references to Node

Description: List of managed nodes

Parameter: nodegroups

Type: list of references to NodeGroup

Description: List of managed nodegroups

5.2.496 ScaleTracker: Entity

parent: Entity

Parameter: name

Type: string

Description: Tracker name

Parameter: enabled

Type: boolean

Description: Tracker is currently enabled or disabled

Parameter: assignCategory

Type: reference to Category or None

Description: Category that should be assigned to managed nodes

Parameter: primaryOverlays

Type: list of references to ConfigurationOverlay

Description: Configuration overlays that managed nodes are added to when they are required by workload

Parameter: allowedResourceProviders

Type: list of strings

Description: Only the specified resource providers will be used for a workload of this tracker (if empty than all allowed)

Parameter: queueLengthThreshold

Type: unsigned integer

Description: Number of pending workloads/jobs that triggers the nodes bursting

Parameter: ageThreshold

Type: unsigned integer

Description: Workload/job pending time threshold that triggers the nodes bursting for this workload (in seconds)

Parameter: workloadsPerNode

Type: unsigned integer

Description: Number of workloads that can be scheduled to the same node at the same time (0 means no limit)

Parameter: options

Type: list of strings

Description: Additional tracker related parameters

5.2.497 SELinuxSettings: Entity

parent: Entity

Parameter: initialize

Type: boolean

Description: Determines whether SELinux is to be initialized by the node installer

Parameter: rebootAfterContextRestore

Type: boolean

Description: This directive determines whether the compute node is to reboot after performing a full filesystem security context restore

Parameter: `allowNFSHomeDirectories`

Type: `boolean`

Description: This directive determines whether to allow using a remote NFS server for the home directories on the node

Parameter: `contextActionAutoInstall`

Type: `enum`

Description: This directive specifies the action which is to be performed by the Node Installer when the node is being installed in the AUTO mode

Parameter: `contextActionFullInstall`

Type: `enum`

Description: This directive specifies the action which is to be performed by the Node Installer when the node is being installed in the FULL mode

Parameter: `contextActionNoSyncInstall`

Type: `enum`

Description: This directive specifies the action which is to be performed by the Node Installer when the node is being installed in the NOSYNC mode

Parameter: `mode`

Type: `enum`

Description: Process policy mode

Parameter: `policy`

Type: `enum`

Description: Process protection policy

Parameter: `keyValueSettings`

Type: `KeyValueSettings` or `None`

Description: Key value settings which can be used to override SELinux options

5.2.498 Semaphore: Entity

parent: `Entity`

Parameter: `ref_node_uuid`

Type: `UUID`

Description: Node

Parameter: `semid`

Type: `integer`

Description: Semaphore Set ID

Parameter: `ipcperm`

Type: `IPCPerm`

Description: IPC permissions

Parameter: `nsems`

Type: unsigned integer

Description: Number of semaphores in the set

5.2.499 *Sensor: Entity*

parent: Entity

Parameter: `type`

Type: enum

Description: Sensor type

Parameter: `name`

Type: string

Description: Sensor name

Parameter: `prt`

Type: unsigned integer

Description: Sensor port

5.2.500 *Session: Entity*

parent: Entity

Parameter: `eventCounter`

Type: unsigned integer

Description: *none*

Parameter: `queuedEventSize`

Type: unsigned integer

Description: *none*

Parameter: `clientType`

Type: unsigned integer

Description: *none*

Parameter: `acknowledgedKeepAlive`

Type: integer

Description: *none*

Parameter: `ref_node_uuid`

Type: UUID

Description: Node

Parameter: `remoteAddress`

Type: IP

Description: *none*

Parameter: username

Type: string

Description: none

Parameter: group

Type: string

Description: none

5.2.501 SharedMemory: Entity

parent: Entity

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: shmid

Type: integer

Description: Shared memory ID

Parameter: ipcperm

Type: IPCPerm

Description: IPC permissions

Parameter: size

Type: unsigned integer

Description: Size in bytes

Parameter: cpid

Type: integer

Description: Creator PID

Parameter: nattch

Type: integer

Description: Number of attaches

5.2.502 SlurmAccountingRole: Role

parent: Role

Parameter: dbdPort

Type: unsigned integer

Description: The port number that the Slurm Database Daemon (slurmdbd) listens to for work

Parameter: storageHost

Type: string

Description: Defines the name of the host the MySQL database is running where slurmdbd is going to store the data

Parameter: storagePort

Type: unsigned integer

Description: The port number that the Slurm Database Daemon (slurmdbd) communicates with the database

Parameter: storageLoc

Type: string

Description: The name of the database as the location where slurmdbd accounting records are written

Parameter: storageUser

Type: string

Description: Defines the name of the user to connect to the MySQL database with to store the job accounting data

Parameter: slurmWlmClusters

Type: list of references to SlurmWlmCluster

Description: List of Slurm clusters which can make use of this SlurmAccountingRole (slurmdbd)

5.2.503 SlurmCgroupsSettings: WlmCgroupsSettings

parent: WlmCgroupsSettings

Parameter: constrainCores

Type: boolean

Description: If true then constrain allowed cores to the subset of allocated resources

Parameter: constrainRAMSpace

Type: boolean

Description: If true then constrain the job's RAM usage

Parameter: constrainSwapSpace

Type: boolean

Description: If true then constrain the job's swap space usage

Parameter: constrainDevices

Type: boolean

Description: If true constrain the job's allowed devices based on GRES allocated resources

Parameter: allowedRamSpace

Type: float

Description: Constrain the job cgroup RAM to this percentage of the allocated memory. If the AllowedRAMSpace limit is exceeded, the job steps will be killed and a warning message will be written to standard error. Also see ConstrainRAMSpace.

Parameter: allowedSwapSpace

Type: float

Description: Constrain the job cgroup swap space to this percentage of the allocated memory

Parameter: maxRAM

Type: float

Description: Set an upper bound of total RAM on the RAM constraint for a job

Parameter: `maxSwap`

Type: `float`

Description: Set an upper bound (of total RAM) on the amount of RAM+Swap that may be used for a job

Parameter: `minRAMSpace`

Type: `unsigned integer`

Description: Set a lower bound on the memory limits defined by `AllowedRAMSpace` and `AllowedSwapSpace`

Parameter: `jobCgroupTemplate`

Type: `string`

Description: Template for job cgroup path (\$UID will be replaced to user ID, \$JOBID will be replaced to job id)

Parameter: `allowedKmemSpace`

Type: `unsigned integer`

Description: Constrain the job cgroup kernel memory to this amount of the allocated memory

Parameter: `constrainKmemSpace`

Type: `boolean`

Description: Specifies if Slurm will constrain the job's Kmem RAM usage

Parameter: `minKmemSpace`

Type: `unsigned integer`

Description: Set a lower bound on the memory limits defined by `AllowedKmemSpace`

Parameter: `maxKmem`

Type: `float`

Description: Set an upper bound of total Kmem for a job

Parameter: `memorySwappiness`

Type: `float`

Description: Configure the kernel's priority for swapping out anonymous pages (such as program data) verses file cache pages for the job cgroup (either `ConstrainRAMSpace` or `ConstrainSwapSpace` must be enabled in order for this parameter to be applied)

5.2.504 `SlurmClientRole: SlurmRole`

parent: `SlurmRole`

Parameter: `slots`

Type: `string`

Description: Number of slots available on this node/category (set 0 for default)

Parameter: `queues`

Type: list of references to `SlurmJobQueue`

Description: Queues this node/nodes in this category belongs to

Parameter: `allQueues`

Type: `boolean`

Description: When set, the role will provide all available queues (the queues property will then be ignored)

Parameter: `nodeAddr`

Type: `string`

Description: Name that a node should be referred to in establishing a communications path

Parameter: `coresPerSocket`

Type: `unsigned integer`

Description: Number of cores in a single physical processor socket

Parameter: `features`

Type: `list of strings`

Description: A list of arbitrary strings indicative of some characteristic associated with the node

Parameter: `tcpPort`

Type: `unsigned integer`

Description: The port number that the Slurm compute node daemon, slurmd, listens to for work on this particular node

Parameter: `realMemory`

Type: `unsigned integer`

Description: Size of real memory on the node - The value will be truncated to the MiB

Parameter: `sockets`

Type: `unsigned integer`

Description: Number of physical processor sockets/chips on the node

Parameter: `threadsPerCore`

Type: `unsigned integer`

Description: Number of logical threads in a single physical core

Parameter: `tmpDisk`

Type: `unsigned integer`

Description: Total size of temporary disk storage in TmpFS in MegaBytes

Parameter: `weight`

Type: `integer`

Description: The priority of the node for scheduling purposes

Parameter: `boards`

Type: `unsigned integer`

Description: Number of baseboards in nodes with a baseboard controller

Parameter: socketsPerBoard

Type: unsigned integer

Description: Number of physical processor sockets/chips on a baseboard

Parameter: reason

Type: string

Description: Identifies the reason for a node being in a particular state

Parameter: cpuSpecList

Type: list of strings

Description: A comma delimited list of Slurm abstract CPU IDs on which Slurm compute node daemons (slurmd, slurmstepd) will be confined

Parameter: coreSpecCount

Type: unsigned integer

Description: Number of cores in a single physical processor socket

Parameter: memSpecLimit

Type: unsigned integer

Description: Limit on combined real memory allocation for compute node daemons (slurmd, slurmstepd)

Parameter: autoDetect

Type: enum

Description: Detect NVIDIA (nvidia) or AMD (rsmi) or Intel (oneapi) GPUs automatically (per node). GPU configuration is part of Slurm GRES.

Parameter: nodeCustomizations

Type: list of WlmNodeCustomizationEntry

Description: Slurm node custom properties

Parameter: genericResources

Type: list of SlurmGenericResource

Description: Slurm generic resources settings

Parameter: cpuBind

Type: enum

Description: Bindings from task to resources

Parameter: hardwareAutoDetection

Type: boolean

Description: The actual hardware configuration probed by slurmd -C

Parameter: memoryAutoDetectionSlack

Type: float

Description: Autodetected memory will be reduced by this percentage when put in slurm.conf

Parameter: IMEX

Type: boolean

Description: Start IMEX daemon from prolog/epilog

5.2.505 SlurmGenericResource: Entity

parent: Entity

Parameter: alias

Type: string

Description: Unique alias name of the generic resource

Parameter: name

Type: string

Description: Name of the generic resource in Slurm

Parameter: count

Type: string

Description: Number of resources of this type available on this node (a suffix K, M, G, T or P may be used to multiply the number by 1024, 1048576, etc. respectively)

Parameter: cores

Type: string

Description: Specify the first thread CPU index numbers for the specific cores which can use this resource (e.g. '0,1,2,3' or '0-3')

Parameter: type

Type: string

Description: An arbitrary string identifying the type of device

Parameter: file

Type: string

Description: Fully qualified pathname of the device files associated with a resource (simple regular expressions are supported)

Parameter: consumable

Type: boolean

Description: Multiple jobs can use the same generic resource

Parameter: addToGresConfig

Type: boolean

Description: Add the generic resource entity to gres.conf

Parameter: Flags

Type: list of strings

Description: Optional flags that can be specified to change configured behavior of the GRES

Parameter: `Links`

Type: list of unsigned numbers

Description: A list of numbers identifying the number of connections between this device and other devices to allow coscheduling of better connected devices

Parameter: `MultipleFiles`

Type: list of strings

Description: A list of device file paths (in the range format) associated with the GRES

5.2.506 `SlurmJob: Job`

parent: `Job`

5.2.507 `SlurmJobQueue: JobQueue`

parent: `JobQueue`

Parameter: `allocNodes`

Type: string

Description: Comma separated list of nodes from which users can submit jobs in the partition

Parameter: `defaultQueue`

Type: boolean

Description: Set this as the default queue

Parameter: `minNodes`

Type: string

Description: Minimal nodes one job has to use

Parameter: `maxNodes`

Type: string

Description: Maximal nodes one job can use

Parameter: `defaultTime`

Type: string

Description: Default job runtime

Parameter: `maxTime`

Type: string

Description: Maximal job runtime

Parameter: `priorityJobFactor`

Type: integer

Description: Partition factor used by priority/multifactor plugin in calculating job priority

Parameter: `priorityTier`

Type: integer

Description: Jobs submitted to a partition with a higher priority tier value will be dispatched before pending jobs in partition with lower priority tier value

Parameter: `hidden`

Type: `boolean`

Description: Hide from all

Parameter: `disableRoot`

Type: `boolean`

Description: Do not allow root to run jobs

Parameter: `rootOnly`

Type: `boolean`

Description: Only allow root to run jobs

Parameter: `allowGroups`

Type: `string`

Description: Specify user groups which are allowed to run jobs

Parameter: `overSubscribe`

Type: `string`

Description: Controls the ability of the partition to execute more than one job at a time on each resource

Parameter: `alternate`

Type: `string`

Description: Partition name of alternate partition to be used if the state of this partition is DRAIN or INACTIVE

Parameter: `graceTime`

Type: `unsigned integer`

Description: Specifies, in units of seconds, the preemption grace time to be extended to a job which has been selected for preemption

Parameter: `defMemPerCPU`

Type: `string`

Description: Default real memory size available per allocated CPU in MegaBytes

Parameter: `maxMemPerCPU`

Type: `string`

Description: Maximum real memory size available per allocated CPU in MegaBytes

Parameter: `defMemPerNode`

Type: `string`

Description: Default real memory size available per allocated node in MegaBytes

Parameter: `maxMemPerNode`

Type: `string`

Description: Maximum real memory size available per allocated node in MegaBytes

Parameter: preemptMode

Type: string

Description: Mechanism used to preempt jobs from this partition

Parameter: reqResv

Type: string

Description: Specifies users of this partition are required to designate a reservation when submitting a job

Parameter: SelectTypeParameters

Type: string

Description: Partition-specific resource allocation type

Parameter: allowAccounts

Type: string

Description: Specify accounts which are allowed to run jobs

Parameter: allowQos

Type: string

Description: Specify qos which are allowed to run jobs

Parameter: denyAccounts

Type: string

Description: Specify accounts which are denied to run jobs

Parameter: denyQos

Type: string

Description: Specify qos which are denied to run jobs

Parameter: lln

Type: boolean

Description: Schedule resources to jobs on the least loaded nodes

Parameter: maxCPUsPerNode

Type: string

Description: Maximum number of CPUs on any node available to all jobs from this partition

Parameter: tresBillingWeights

Type: list of strings

Description: Billing weights of each TRES type that will be used in calculating the usage of a job

Parameter: defMemPerGPU

Type: string

Description: Default real memory size available per allocated GPU in megabytes

Parameter: defCpuPerGPU

Type: string

Description: Default count of CPUs allocated per allocated GPU

Parameter: `cpuBind`

Type: `enum`

Description: How tasks are bound to allocated CPUs

Parameter: `qos`

Type: `string`

Description: Used to extend the limits available to a QOS on a partition

Parameter: `exclusiveUser`

Type: `boolean`

Description: If set to YES then nodes will be exclusively allocated to users

Parameter: `ordering`

Type: `integer`

Description: Positioning of the jobqueue. Smaller values go first in the configuration file.

5.2.508 `SlurmJobQueueAccessList: Entity`

parent: `Entity`

Parameter: `wlmCluster`

Type: reference to `WlmCluster`

Description: WLM cluster link to this job queue access list

Parameter: `slurmJobQueue`

Type: list of references to `SlurmJobQueue`

Description: List of queues that can be submitted to. If none is specified, this access list will submit to all job queues in the specified `WlmCluster`.

5.2.509 `SlurmJobQueueStat: JobQueueStat`

parent: `JobQueueStat`

Parameter: `memory`

Type: `string`

Description: Memory

Parameter: `cpus`

Type: unsigned integer

Description: CPUs

Parameter: `total`

Type: unsigned integer

Description: Total nodes

Parameter: `usable`

Type: unsigned integer

Description: Usable nodes

Parameter: free

Type: unsigned integer

Description: Free nodes

Parameter: nodeLimit

Type: unsigned integer

Description: Node limit

Parameter: timeLimit

Type: string

Description: Time limit

Parameter: other

Type: string

Description: Other traits

5.2.510 SlurmOCISettings:Entity

parent: Entity

Parameter: containerPath

Type: string

Description: Override path pattern for placement of the generated OCI Container bundle directory.

Parameter: createEnvFile

Type: boolean

Description: Create environment file for container.

Parameter: runTimeCreate

Type: string

Description: Pattern for OCI runtime create operation.

Parameter: runTimeDelete

Type: string

Description: Pattern for OCI runtime delete operation.

Parameter: runTimeKill

Type: string

Description: Pattern for OCI runtime kill operation.

Parameter: runTimeQuery

Type: string

Description: Pattern for OCI runtime query operation.

Parameter: runTimeRun

Type: string

Description: Pattern for OCI runtime run operation.

Parameter: `runTimeStart`

Type: `string`

Description: Pattern for OCI runtime start operation.

5.2.511 `SlurmRole: Role`

parent: `Role`

Parameter: `wlmCluster`

Type: reference to `SlurmWlmCluster`

Description: WLM cluster link to this WLM role

5.2.512 `SlurmServerRole: SlurmRole`

parent: `SlurmRole`

Parameter: `externalServer`

Type: `boolean`

Description: Slurm server daemons are running on some external machine

5.2.513 `SlurmSubmitRole: WlmSubmitRole`

parent: `WlmSubmitRole`

Parameter: `slurmJobQueueAccessList`

Type: list of `SlurmJobQueueAccessList`

Description: List of slurm clusters and their associated queues that can be submitted to

5.2.514 `SlurmWlmCluster: WlmCluster`

parent: `WlmCluster`

Parameter: `placeholders`

Type: list of `JobQueuePlaceholder`

Description: Job queue node placeholders mode

Parameter: `cgroups`

Type: `SlurmCgroupsSettings`

Description: Submode containing Slurm related cgroups settings

Parameter: `powerSavingEnabled`

Type: `boolean`

Description: Enable power saving options into `slurm.conf`

Parameter: `suspendTime`

Type: `integer`

Description: Nodes which remain idle for this number of seconds will be placed into power save mode by `SuspendProgram`

Parameter: `suspendTimeout`

Type: `unsigned integer`

Description: Maximum time permitted (in second) between when a node suspend request is issued and when the node shutdown

Parameter: `resumeTimeout`

Type: unsigned integer

Description: Maximum time permitted (in second) between when a node is resume request is issued and when the node is actually available for use

Parameter: `suspendProgram`

Type: string

Description: Program that will be executed when a node remains idle for an extended period of time

Parameter: `resumeProgram`

Type: string

Description: Program that will be executed when a suspended node is needed by a submitted jobs

Parameter: `prologSlurmctld`

Type: string

Description: Fully qualified pathname of a program for the slurmctld daemon to execute before granting a new job allocation

Parameter: `epilogSlurmctld`

Type: string

Description: Fully qualified pathname of a program for the slurmctld to execute upon termination of a job allocation

Parameter: `prolog`

Type: string

Description: Fully qualified pathname of a program for the slurmd to execute whenever it is asked to run a job step from a new job allocation

Parameter: `epilog`

Type: string

Description: Fully qualified pathname of a script to execute as user root on every node when a user's job completes

Parameter: `taskProlog`

Type: string

Description: Fully qualified pathname of a script to execute prior to launching job step (invoked by slurmstepd).

Parameter: `taskEpilog`

Type: string

Description: Fully qualified pathname of a script to execute after completion of job step (invoked by slurmstepd).

Parameter: `srunProlog`

Type: string

Description: Fully qualified pathname of a script to execute prior to launching job step (invoked by srun).

Parameter: `srunEpilog`

Type: string

Description: Fully qualified pathname of a script to execute after completion of job step (invoked by srun).

Parameter: `fastSchedule`

Type: unsigned integer

Description: Controls how a node's configuration specifications in `slurm.conf` are used

Parameter: `gresTypes`

Type: list of strings

Description: A list of generic resources to be managed

Parameter: `prologEpilogTimeout`

Type: unsigned integer

Description: The interval in seconds Slurm waits for Prolog and Epilog before terminating them (value 0 removes the parameter from `slurm.conf`)

Parameter: `batchStartTimeout`

Type: unsigned integer

Description: The maximum time (in seconds) that a batch job is permitted for launching before being considered missing and releasing the allocation (value 0 removes the parameter from `slurm.conf`)

Parameter: `prefix`

Type: string

Description: Slurm root installation directory

Parameter: `etc`

Type: string

Description: Slurm configuration files directory

Parameter: `stateSave`

Type: string

Description: Directory into which the Slurm controller saves its state

Parameter: `version`

Type: string

Description: Major Slurm version

Parameter: `slurmConfFileTemplate`

Type: string

Description: Template for `slurm.conf` file

Parameter: `gresConfFileTemplate`

Type: string

Description: Template for gres.conf file

Parameter: autoDetect

Type: enum

Description: Detect NVIDIA (nvidia) or AMD (rsmi) or Intel (oneapi) GPUs automatically (global option). GPU configuration is part of Slurm GRES.

Parameter: configureMigs

Type: boolean

Description: Detect and configure MIG profiles as GPU types in Slurm

Parameter: slurmdParameters

Type: list of strings

Description: Parameters specific to the Slurmd

Parameter: scheduler

Type: string

Description: Scheduler to use in combination with slurm

Parameter: schedulerParameters

Type: list of strings

Description: Parameters specific to the scheduler. The interpretation of them varies by SchedulerType

Parameter: slurmctldParameters

Type: list of strings

Description: Parameters specific to the Slurmctld

Parameter: prologFlags

Type: list of strings

Description: Flags to control the prolog behavior

Parameter: selectType

Type: string

Description: The type of resource selection algorithm to be used (slurm: SelectType)

Parameter: selectTypeParameters

Type: list of strings

Description: Parameters specific to Select Type (slurm: SelectTypeParameters)

Parameter: accountingStorageTRES

Type: list of strings

Description: List of resources you wish to track on the cluster (slurm: AccountingStorageTRES)

Parameter: ociSettings

Type: SlurmOCISettings or None

Description: OCI container settings for Slurm

5.2.515 *SNMPSettings: Entity*

parent: Entity

Parameter: version

Type: enum

Description: Version of SNMP that should be use to read information from the device

Parameter: timeout

Type: float

Description: SNMP timeout, set to 0 for default

Parameter: vlanTimeout

Type: float

Description: SNMP timeout for VLAN calls, set to 0 for default

Parameter: retries

Type: integer

Description: SNMP retries, set to -1 for default

Parameter: readString

Type: string

Description: SNMP read-only community string

Parameter: writeString

Type: string

Description: SNMP read-write community string

Parameter: securityName

Type: string

Description: Security name

Parameter: context

Type: string

Description: *none*

Parameter: authProtocol

Type: enum

Description: Authentication protocol

Parameter: privProtocol

Type: enum

Description: Privacy protocol

Parameter: authKey

Type: string

Description: Authentication key

Parameter: `privKey`

Type: string

Description: Privacy key

Parameter: `securityLevel`

Type: enum

Description: Security level

Parameter: `filename`

Type: string

Description: Filename for SNMP testing

5.2.516 `SnmpTrapRole: Role`

parent: Role

Parameter: `event`

Type: boolean

Description: Enable events

Parameter: `mail`

Type: boolean

Description: Enable mail

Parameter: `recipients`

Type: list of strings

Description: Recipients

Parameter: `allAdministrators`

Type: boolean

Description: Also send e-mail to all administrators as defined in partition

Parameter: `access`

Type: string

Description: Access string

Parameter: `server`

Type: string

Description: The SNMP server

Parameter: `sender`

Type: string

Description: The sender of the e-mail

Parameter: `arguments`

Type: list of strings

Description: Additional script arguments

Parameter: `alternativeScript`

Type: `string`

Description: Alternative script

5.2.517 `SoftwareImage: Entity`

parent: `Entity`

Parameter: `name`

Type: `string`

Description: Name

Parameter: `path`

Type: `string`

Description: Base directory of the image

Parameter: `originalImage`

Type: `UUID`

Description: Image from which this one will be cloned

Parameter: `fileOperationInProgress`

Type: `boolean`

Description: *none*

Parameter: `kernelVersion`

Type: `string`

Description: Kernel version used

Parameter: `kernelParameters`

Type: `string`

Description: Kernel parameters passed to the kernel at boot time

Parameter: `kernelOutputConsole`

Type: `string`

Description: Kernel output console used at boot time

Parameter: `creationTime`

Type: `timestamp`

Description: Creation time

Parameter: `modules`

Type: `list of KernelModule`

Description: Manage kernel modules loaded in this image

Parameter: `enableSOL`

Type: `boolean`

Description: Enable Serial console Over LAN

Parameter: SOLPort

Type: string

Description: Serial port to use for SOL, usually ttyS0 or ttyS1

Parameter: SOLSpeed

Type: string

Description: Baud rate to use for SOL

Parameter: SOLFlowControl

Type: boolean

Description: Enable to use hardware flow control for SOL

Parameter: notes

Type: string

Description: Administrator notes

Parameter: fspart

Type: reference to FSPart or None

Description: Internal pointer to the FSPart associated with this image

Parameter: bootfspart

Type: reference to FSPart or None

Description: Internal pointer to the FSPart associated with the boot directory of this image

Parameter: revisionID

Type: integer

Description: *none*

Parameter: parentSoftwareImage

Type: reference to SoftwareImage or None

Description: *none*

Parameter: revisionHistory

Type: list of SoftwareImageRevisionInfo

Description: *none*

5.2.518 SoftwareImageFileSelection: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: patterns

Type: list of strings

Description: Patterns to be included

Parameter: watch

Type: boolean

Description: Watch files with inotify

5.2.519 SoftwareImageProxy: Entity

parent: Entity

Parameter: parentSoftwareImage

Type: reference to SoftwareImage

Description: Parent software image

Parameter: revisionID

Type: integer

Description: Revision ID

5.2.520 SoftwareImageRevisionInfo: Entity

parent: Entity

Parameter: image

Type: reference to SoftwareImage or None

Description: none

Parameter: revisionID

Type: integer

Description: Revision ID

Parameter: creationTime

Type: timestamp

Description: Revision creation time

Parameter: removalTime

Type: timestamp

Description: Revision removal time

Parameter: description

Type: string

Description: Revision Description

5.2.521 StandaloneMonitoredEntity: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: type

Type: string

Description: Optional type in case name matches an other entity

Parameter: data

Type: string

Description: Data that will be passed to the script environment

Parameter: notes

Type: string

Description: Notes

5.2.522 StaticRoute: Entity

parent: Entity

Parameter: name

Type: string

Description: Generally a unique combination of gateway ip and netmaskbits

Parameter: ip

Type: IP

Description: Destination IP

Parameter: gateway

Type: IP

Description: Gateway IP address

Parameter: netmaskBits

Type: unsigned integer

Description: Destination netmask bits

Parameter: metric

Type: unsigned integer

Description: Network metric

Parameter: network

Type: reference to Network or None

Description: Destination network the interface is connected to

Parameter: networkDeviceName

Type: string

Description: Name of network device

Parameter: notes

Type: string

Description: Administrator notes

5.2.523 StatusCollectorSubSystemInfo: StatusSubSystemInfo**parent:** StatusSubSystemInfo**Parameter:** nodes**Type:** unsigned integer**Description:** none**Parameter:** updates**Type:** unsigned integer**Description:** none**Parameter:** merges**Type:** unsigned integer**Description:** none**5.2.524** StatusControllerSubSystemInfo: StatusSubSystemInfo**parent:** StatusSubSystemInfo**Parameter:** updates**Type:** unsigned integer**Description:** none**Parameter:** reports**Type:** unsigned integer**Description:** none**Parameter:** nodes**Type:** unsigned integer**Description:** none**Parameter:** icmpPingCount**Type:** unsigned integer**Description:** none**Parameter:** checkUrlCount**Type:** unsigned integer**Description:** none**Parameter:** customScriptCount**Type:** unsigned integer**Description:** none**Parameter:** customFunctionCount**Type:** unsigned integer**Description:** none

Type: unsigned integer

Description: *none*

5.2.529 StatusTransitionSubSystemInfo: StatusSubSystemInfo

parent: StatusSubSystemInfo

Parameter: handled

Type: unsigned integer

Description: *none*

Parameter: transitions

Type: list of unsigned numbers

Description: Transition matrices: from -> to

5.2.530 StorageNodePolicy: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: exportedDirectories

Type: list of strings

Description: Exported directories

Parameter: minStorageVolumeSize

Type: unsigned integer

Description: Minimal size of storage volume

Parameter: defaultJobOutputSize

Type: unsigned integer

Description: Default size of job output data

Parameter: storageVolumeFilesystem

Type: string

Description: Filesystem type of storage volume

Parameter: shareStorageVolumeBetweenJobs

Type: boolean

Description: Share storage volumes between jobs

Parameter: scalingUpFactor

Type: float

Description: Scaling up factor

Parameter: storageNodeNamePrefix

Type: string

Description: Storage node name prefix

Parameter: `storagePrototype`

Type: reference to `CloudNode`

Description: Template node used for instantiating cloud storage nodes

Parameter: `maxStorageNodeCount`

Type: unsigned integer

Description: Maximum number of storage nodes

Parameter: `maxJobsPerNode`

Type: unsigned integer

Description: Maximum number of jobs that can be run on a single storage node simultaneously

Parameter: `storageNodeIdleTimeLimit`

Type: unsigned integer

Description: After that timeout storage node will be shut down

Parameter: `terminateStorageNodes`

Type: boolean

Description: Terminate storage nodes instead of powering them off

Parameter: `cloudOperationTimeout`

Type: unsigned integer

Description: Timeout for various cloud job operations

Parameter: `maxDownloadTime`

Type: unsigned integer

Description: Maximum time job results data transfer can take

Parameter: `maxUploadTime`

Type: unsigned integer

Description: Maximum time job input data transfer can take

Parameter: `intermediateStorage`

Type: `CMJobIntermediateStorage`

Description: Place to store data to be accessible from storage node

Parameter: `restartNFSServer`

Type: boolean

Description: Restarts the NFS server on the storage node before umounting.

Parameter: `extraOptions`

Type: list of strings

Description: Extra options for jobs

5.2.531 `StorageRole: Role`**parent:** `Role`**Parameter:** `nfsThreads`**Type:** unsigned integer**Description:** Number of nfs threads (0 for don't touch the current config file value)**Parameter:** `disableNFS1`**Type:** boolean**Description:** Disable NFS1, NFS threads needs to bet set**Parameter:** `disableNFS2`**Type:** boolean**Description:** Disable NFS2, NFS threads needs to bet set**Parameter:** `disableNFS3`**Type:** boolean**Description:** Disable NFS3, NFS threads needs to bet set**Parameter:** `disableNFS4`**Type:** boolean**Description:** Disable NFS4, NFS threads needs to bet set**Parameter:** `nfs4grace`**Type:** unsigned integer**Description:** NFS4 grace period (0 for don't touch the current config file value)**Parameter:** `statdPort`**Type:** unsigned integer**Description:** Stat daemon port (0 for don't touch the current config file value)**Parameter:** `statdOutgoingPort`**Type:** unsigned integer**Description:** Stat daemon outgoing port (0 for don't touch the current config file value)**Parameter:** `mountdPort`**Type:** unsigned integer**Description:** Mount daemon port (0 for don't touch the current config file value)**Parameter:** `rquotadPort`**Type:** unsigned integer**Description:** Rquota daemon port (0 for don't touch the current config file value)**Parameter:** `lockdTcpPort`**Type:** unsigned integer**Description:** Lock daemon TCP port (0 for don't touch the current config file value)

Parameter: `lockdUdpPort`

Type: unsigned integer

Description: Lock daemon UDP port (0 for don't touch the current config file value)

Parameter: `rdmaPort`

Type: unsigned integer

Description: RDMA port (0 for don't touch the current config file value)

5.2.532 `StringListObject: Entity`

parent: Entity

Parameter: `list`

Type: list of strings

Description: List

5.2.533 `SubnetManagerRole: Role`

parent: Role

Parameter: `interconnect`

Type: enum

Description: Type of interconnect

Parameter: `ibl2mtu`

Type: enum

Description: IB L2 MTU Value

5.2.534 `SubSystemInfo: Entity`

parent: Entity

Parameter: `ref_node_uuid`

Type: UUID

Description: Node

Parameter: `name`

Type: string

Description: Name

Parameter: `timestamp`

Type: timestamp

Description: Time

5.2.535 `Switch: Device`

parent: Device

Parameter: `ip`

Type: IP

Description: IP address

Parameter: `network`

Type: reference to Network or None

Description: Network to which this switch is connected

Parameter: ports

Type: integer

Description: Number of ports

Parameter: model

Type: string

Description: The switch model

Parameter: snmpSettings

Type: SNMPSettings or None

Description: Configure the cluster wide SNMP settings

Parameter: accessSettings

Type: AccessSettings or None

Description: Configure the cluster wide Access settings

Parameter: members

Type: list of references to Switch

Description: List of switches belonging to this stack

Parameter: controlScript

Type: string

Description: Custom control script that provides switch functionality

Parameter: controlScriptTimeout

Type: unsigned integer

Description: Control script timeout

Parameter: priority

Type: unsigned integer

Description: Devices on multiple switches will be listed under the switch with the largest priority

Parameter: lowestPort

Type: integer

Description: Lowest port

Parameter: uplinks

Type: list of unsigned numbers

Description: List of ports connected to other switches.

Parameter: disablePortDetection

Type: boolean

Description: Disable port detection for this switch

Parameter: `disablePortMapping`

Type: `boolean`

Description: Disable port index mapping

Parameter: `vlanCacheTime`

Type: `unsigned integer`

Description: Time to cache VLAN information

Parameter: `hasClientDaemon`

Type: `boolean`

Description: Switch runs a python cluster manager client daemon

Parameter: `ztpSettings`

Type: `ZTPSettings` or `None`

Description: Configure the ZTP settings

Parameter: `guid`

Type: `UUID`

Description: The switch GUID

Parameter: `subnetManager`

Type: `boolean`

Description: Indicate the subnet manager is running

Parameter: `disableSNMP`

Type: `boolean`

Description: Disable SNMP calls

Parameter: `services`

Type: `list of OSServiceConfig`

Description: Manage operating system services

Parameter: `cumulusMode`

Type: `enum`

Description: Cumulus mode

Parameter: `cumulusFile`

Type: `string`

Description: Cumulus file

Parameter: `cumulusConfiguration`

Type: `free JSON object`

Description: Cumulus

5.2.536 `SwitchPort:Entity`

parent: `Entity`

Parameter: `networkSwitch`

Type: reference to Switch

Description: Switch

Parameter: prt

Type: unsigned integer

Description: Port number on the switch

5.2.537 SyncInfo: Entity

parent: Entity

Parameter: node

Type: reference to Node

Description: *none*

Parameter: provisioningNode

Type: reference to Node

Description: *none*

Parameter: fspart

Type: reference to FSPart

Description: *none*

Parameter: mode

Type: enum

Description: *none*

Parameter: type

Type: enum

Description: *none*

Parameter: dryRun

Type: boolean

Description: *none*

Parameter: startTime

Type: timestamp

Description: *none*

Parameter: endTime

Type: timestamp

Description: *none*

Parameter: exitCode

Type: integer

Description: *none*

Parameter: signal

Type: integer

Description: *none*

Parameter: `numberOfFiles`

Type: unsigned integer

Description: The count of all 'files' (in the generic sense), which includes directories, symlinks, etc.

Parameter: `numberOfTransferredFiles`

Type: unsigned integer

Description: The count of normal files that were updated via rsync's delta-transfer algorithm, which does not include created dirs, symlinks, etc.

Parameter: `numberOfCreatedFiles`

Type: unsigned integer

Description: The count of normal files that were created.

Parameter: `numberOfDeletedFiles`

Type: unsigned integer

Description: The count of normal files that were deleted.

Parameter: `totalFileSize`

Type: unsigned integer

Description: The total sum of all file sizes in the transfer. This does not count any size for directories or special files, but does include the size of symlinks.

Parameter: `totalTransferredFileSize`

Type: unsigned integer

Description: The total sum of all files sizes for just the transferred files.

Parameter: `literalData`

Type: unsigned integer

Description: How much unmatched file-update data we had to send to the receiver for it to recreate the updated files.

Parameter: `matchedData`

Type: unsigned integer

Description: How much data the receiver got locally when recreating the updated files.

Parameter: `fileListSize`

Type: unsigned integer

Description: How big the file-list data was when the sender sent it to the receiver. This is smaller than the in-memory size for the file list due to some compressing of duplicated data when rsync sends the list.

Parameter: `fileListGenerationTime`

Type: float

Description: The number of seconds that the sender spent creating the file list. This requires a modern rsync on the sending side for this to be present.

Parameter: `fileListTransferTime`

Type: float

Description: The number of seconds that the sender spent sending the file list to the receiver.

Parameter: totalSent

Type: unsigned integer

Description: The count of all the bytes that rsync sent from the client side to the server side.

Parameter: totalReceived

Type: unsigned integer

Description: The count of all non-message bytes that rsync received by the client side from the server side. 'Non-message' bytes means that we don't count the bytes for a verbose message that the server sent to us, which makes the stats more consistent.

Parameter: transferSpeed

Type: float

Description: Transfer speed

Parameter: speedup

Type: float

Description: Speedup

5.2.538 SyncSource: Entity

parent: Entity

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: fspart

Type: reference to FSPart

Description: none

Parameter: priority

Type: unsigned integer

Description: none

5.2.539 SyncTarget: Entity

parent: Entity

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: fspart

Type: reference to FSPart

Description: none

Parameter: target

Type: string

Description: none

Parameter: prefix

Type: string

Description: none

Parameter: excludeList

Type: string

Description: none

Parameter: root

Type: boolean

Description: none

Parameter: priority

Type: unsigned integer

Description: none

5.2.540 SysInfoCollector: Entity

parent: Entity

Parameter: ref_device_uuid

Type: UUID

Description: Device

Parameter: processors

Type: list of Processor

Description: none

Parameter: disks

Type: list of DiskInfo

Description: none

Parameter: gpus

Type: list of GPUInfo

Description: none

Parameter: dpus

Type: list of DPUInfo

Description: none

Parameter: fpgas

Type: list of FPGAInfo

Description: none

Parameter: memory

Type: list of MemoryInfo

Description: *none*

Parameter: biosVersion

Type: string

Description: *none*

Parameter: biosVendor

Type: string

Description: *none*

Parameter: biosDate

Type: string

Description: *none*

Parameter: motherboardManufacturer

Type: string

Description: *none*

Parameter: motherboardName

Type: string

Description: *none*

Parameter: memoryTotal

Type: unsigned integer

Description: *none*

Parameter: memorySwap

Type: unsigned integer

Description: *none*

Parameter: diskCount

Type: unsigned integer

Description: *none*

Parameter: diskTotalSpace

Type: unsigned integer

Description: *none*

Parameter: osName

Type: string

Description: *none*

Parameter: osVersion

Type: string

Description: *none*

Parameter: osFlavor

Type: string

Description: *none*

Parameter: vendorTag

Type: string

Description: *none*

Parameter: systemName

Type: string

Description: *none*

Parameter: systemManufacturer

Type: string

Description: *none*

Parameter: nics

Type: list of strings

Type: boolean

Description: *none*

Parameter: fips
Type: boolean
Description: *none*

Parameter: fabric
Type: boolean
Description: *none*

Parameter: clusterRandomNumber
Type: unsigned integer
Description: *none*

Parameter: updateCount
Type: unsigned integer
Description: *none*

Parameter: timestamp
Type: timestamp
Description: *none*

5.2.541 SystemctlUnit: Entity

parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: unit
Type: string
Description: Unit

Parameter: load
Type: string
Description: Load

Parameter: active
Type: string
Description: Active

Parameter: sub
Type: string
Description: The low-level unit activation state, values depend on unit type

Parameter: description
Type: string
Description: Description

5.2.542 TimeZoneSettings: Entity

parent: Entity

Parameter: timeZone

Type: string

Description: Time zone

Parameter: biosUTC

Type: boolean

Description: Store BIOS time in UTC

5.2.543 UGECgroupsSettings: WlmCgroupsSettings

parent: WlmCgroupsSettings

Parameter: enabled

Type: boolean

Description: If true then settings are configured

Parameter: cpuset

Type: boolean

Description: If true then UGE puts the job into a cpuset cgroup with the specific CPU ids assigned

Parameter: freezer

Type: boolean

Description: If true then the whole job is frozen by the kernel

Parameter: freezePeTasks

Type: boolean

Description: If false then slave tasks are not put in the freezer, otherwise all slave tasks are frozen (also slaves on remote hosts)

Parameter: killing

Type: boolean

Description: If true then UGE signals all processes forked/started by the job until all of them are killed

Parameter: forcedNuma

Type: boolean

Description: If true then on NUMA machines only local memory is allowed to be used when the job requested memory allocation with -mbind cores:strict

Parameter: vmemLimit

Type: boolean

Description: Specifies if virtual memory can be limited with cgroups (h_vmem_limit)

Parameter: memFreeHard

Type: boolean

Description: If true then kernel ensures that the job does not use more main memory than required (m_mem_free_hard)

Parameter: memFreeSoft

Type: boolean

Description: If true (and hard memory limit is turned off) then the requested memory with m_mem_free is a soft limit (m_mem_free_soft)

Parameter: minMemoryLimit

Type: string

Description: A host based minimum memory limit, in bytes or values like 10M, 1G (min_memory_limit)

Parameter: jobCgroupTemplate

Type: string

Description: Template for job cgroup path (\$JOBID will be replaced to job id, \$TASKID to array task id)

Parameter: options

Type: list of strings

Description: Additional UGE cgroup options

Parameter: devices

Type: list of strings

Description: Configurations for cgroup devices

5.2.544 UGEClientRole: UGERole

parent: UGERole

Parameter: execHost

Type: boolean

Description: Specifies if host is allowed to run Grid Engine jobs

Parameter: adminHost

Type: boolean

Description: Specifies if host is administrative one

Parameter: slots

Type: string

Description: Number of slots available on this node/category

Parameter: queues

Type: list of references to UGEJobQueue

Description: Queues this node/nodes in this category belongs to

Parameter: allQueues

Type: boolean

Description: When set, the role will provide all available queues. (The queues property will then be ignored.)

Parameter: gpus

Type: unsigned integer

Description: Number of gpus

Parameter: gpuDevices

Type: list of strings

Description: Custom gpu RSMAP

Parameter: micDevices

Type: list of strings

Description: Custom phi RSMAP

Parameter: cgroups

Type: UGECgroupsSettings

Description: Submode containing UGE related cgroups settings

Parameter: nodeCustomizations

Type: list of WlmNodeCustomizationEntry

Description: Grid Engine node custom properties

Parameter: prolog

Type: string

Description: Path to prolog script that is configured at local level (e.g. root@/cm/local/apps/cmd/scripts/prolog)

Parameter: epilog

Type: string

Description: Path to epilog script that is configured at global level

Parameter: dcgmPort

Type: unsigned integer

Description: NVIDIA's Data Center GPU Manager Port

Parameter: IMEX

Type: boolean

Description: Start IMEX daemon from prolog/epilog

5.2.545 UGEJob: GridEngineJob

parent: GridEngineJob

5.2.546 UGEJobQueue: GridEngineJobQueue

parent: GridEngineJobQueue

Parameter: pelist

Type: list of strings

Description: Parallel environments associated with queue

5.2.547 UGEJobQueueStat: GridEngineJobQueueStat

parent: GridEngineJobQueueStat

5.2.548 UGEParallelEnvironment: GridEngineParallelEnvironment

parent: GridEngineParallelEnvironment

Parameter: daemonForksSlaves

Type: boolean

Description: Defines if every task of a tightly integrated parallel job gets started individually

Parameter: masterForksSlaves

Type: boolean

Description: Indicates if limits set for the master task are multiplied by the number of slots granted on the host

5.2.549 UGERole: Role

parent: Role

Parameter: wlmCluster

Type: reference to UGEWlmCluster

Description: WLM cluster link to this WLM role

5.2.550 UGEServerRole: UGERole

parent: UGERole

Parameter: externalServer

Type: boolean

Description: Grid Engine server daemon is running on some external machine

Parameter: prolog

Type: string

Description: Path to prolog script that is configured at global level

Parameter: epilog

Type: string

Description: Path to epilog script that is configured at global level

5.2.551 UGESubmitRole: WlmSubmitRole

parent: WlmSubmitRole

Parameter: ugeWlmClusters

Type: list of references to UGEWlmCluster

Description: List of UGE clusters which the role belongs to

5.2.552 UGEWlmCluster: WlmCluster

parent: WlmCluster

Parameter: parallelEnvironments

Type: list of UGEParallelEnvironment

Description: UGE Parallel Environments

Parameter: cgroups

Type: UGECgroupsSettings

Description: Submode containing UGE related cgroups settings

Parameter: placeholders

Type: list of JobQueuePlaceholder

Description: Job queue node placeholders mode

Parameter: prefix

Type: string

Description: UGE installation directory

Parameter: cell

Type: string

Description: UGE cell directory location

Parameter: version

Type: string

Description: Major UGE version

Parameter: accountingSynchronization

Type: boolean

Description: Update UGE job final state in BCM by calling qstat periodically

5.2.553 UnmanagedNode: Device

parent: Device

Parameter: unmanagedNodeConfiguration

Type: reference to UnmanagedNodeConfiguration

Description: The unmanaged node configuration used for this node

Parameter: ip

Type: IP

Description: Ip address

Parameter: network

Type: reference to Network or None

Description: Network to which this switch is connected

Parameter: additionalHostnames

Type: list of strings

Description: List of additional hostnames that should resolve to the interfaces IP address

Parameter: pxelabel

Type: string

Description: PXE menu label to be used when this node boots

Parameter: bmcIp

Type: IP

Description: BMC ip address

Parameter: bmcType

Type: enum

Description: The type of BMC interface available

Parameter: bmcSettings

Type: BMCSettings or None

Description: Configure the baseboard management controller settings

Parameter: biosSetup

Type: free JSON object

Description: BIOS setup

Parameter: bootLoader

Type: enum

Description: Boot loader

Parameter: bootLoaderProtocol

Type: enum

Description: Boot loader protocol for retrieving initrd and vmlinuz

Parameter: bootLoaderFile

Type: string

Description: Alternative boot loader file

Parameter: keyValueSettings

Type: KeyValueSettings or None

Description: Key value settings unique to this node

5.2.554 UnmanagedNodeConfiguration: Entity

parent: Entity

Parameter: name

Type: string

Description: Name

Parameter: description

Type: string

Description: description

Parameter: pxeConfigurationTemplate

Type: string

Description: PXE configuration template used to write out pxelinux.cfg

Parameter: grubConfigurationTemplate

Type: string

Description: Grub configuration template used to write out grub.cfg

Parameter: image

Type: reference to FSPart or None

Description: Image filesystem part used to boot nodes from

Parameter: pxelabel

Type: string

Description: PXE menu label to be used when this node boots

Parameter: keyValueSettings

Type: KeyValueSettings or None

Description: Key value settings used for all unmanaged nodes in this configuration unless otherwise specified

Parameter: bmcSettings

Type: BMCSettings or None

Description: Configure the baseboard management controller settings

Parameter: bootLoader

Type: enum

Description: Boot loader

Parameter: bootLoaderProtocol

Type: enum

Description: Boot loader protocol for retrieving initrd and vmlinuz

Parameter: bootLoaderFile

Type: string

Description: Alternative boot loader file

5.2.555 User: Entity

parent: Entity

Parameter: name

Type: string

Description: User login (e.g. donald)

Parameter: ID

Type: string

Description: User ID number

Parameter: commonName

Type: string

Description: Full name (e.g. Donald Duck)

Parameter: `surname`

Type: `string`

Description: Surname (e.g. Duck)

Parameter: `groupID`

Type: `string`

Description: Base group of this user

Parameter: `loginShell`

Type: `string`

Description: Login shell

Parameter: `homeDirectory`

Type: `string`

Description: Home directory

Parameter: `password`

Type: `string`

Description: Password

Parameter: `homeDirOperation`

Type: `boolean`

Description: Set to false to not create or move home directory

Parameter: `shadowMin`

Type: `unsigned integer`

Description: Minimum number of days required between password changes

Parameter: `shadowMax`

Type: `unsigned integer`

Description: Maximum number of days for which the user password remains valid.

Parameter: `shadowWarning`

Type: `unsigned integer`

Description: Number of days of advance warning given to the user before the user password expires

Parameter: `shadowInactive`

Type: `unsigned integer`

Description: Number of days of inactivity allowed for the user

Parameter: `shadowLastChange`

Type: `unsigned integer`

Description: Number of days between January 1, 1970 and the day when the user password was last changed

Parameter: shadowExpire

Type: unsigned integer

Description: Date on which the user login will be disabled

Parameter: email

Type: string

Description: email

Parameter: profile

Type: string

Description: Profile for Authorization

Parameter: certSerialNumber

Type: integer

Description: Serial number of the certificate assigned to user

Parameter: certCloudJobSerialNumber

Type: integer

Description: Serial number of the cloudjob certificate assigned to user

Parameter: projectManager

Type: ProjectManager or None

Description: Project manager

Parameter: notes

Type: string

Description: Administrator notes

Parameter: homePage

Type: string

Description: Home page

Parameter: information

Type: string

Description: Information added by CMDaemon

Parameter: cloudJob

Type: boolean

Description: Create a certificate with the cloudjob profile for cmjob

Parameter: writeSshProxyConfig

Type: boolean

Description: Write ssh proxy config

5.2.556 Validation: Entity

parent: Entity

Parameter: ref_entity_uuid

Type: UUID

Description: Entity

Parameter: field

Type: string

Description: Field

Parameter: error_code

Type: enum

Description: Error

Parameter: message

Type: string

Description: Message

Parameter: severity

Type: enum

Description: Severity

5.2.557 VersionInfo: Entity

parent: Entity

Parameter: ref_node_uuid

Type: UUID

Description: Node

Parameter: cmVersion

Type: string

Description: none

Parameter: cmdaemonVersion

Type: string

Description: none

Parameter: cmdaemonBuildIndex

Type: unsigned integer

Description: none

Parameter: cmdaemonBuildHash

Type: string

Description: none

Parameter: databaseVersion

Type: unsigned integer

Description: none

5.2.558 WillChange: Entity**parent:** Entity**Parameter:** ref_base_type**Type:** string**Description:** Base type**Parameter:** ref_entity_uuid**Type:** UUID**Description:** Entity**Parameter:** parameter**Type:** string**Description:** Parameter**Parameter:** auto_change**Type:** enum**Description:** Auto change**5.2.559 WireguardInfo: Entity****parent:** Entity**Parameter:** ref_node_uuid**Type:** UUID**Description:** Node**Parameter:** interface**Type:** string**Description:** Interface name**Parameter:** publicKey**Type:** string**Description:** Public key**5.2.560 WlmAdvancedAccountingSettings: Entity****parent:** Entity**Parameter:** managedHierarchy**Type:** list of strings**Description:** Representation of account name as a list of organizational entities**Parameter:** separator**Type:** string**Description:** Separator of organizational entities in the account names**Parameter:** jobCommentFields**Type:** list of strings

Description: User provided job type as a regexp that is parsed and monitored

Parameter: `extractAccountingInfo`

Type: `boolean`

Description: Extract accounting information, set to false to keep inside account/comments fields

5.2.561 `WlmCgroupsSettings: Entity`

parent: `Entity`

Parameter: `mountPoint`

Type: `string`

Description: Where cgroups is mounted

Parameter: `autoMount`

Type: `boolean`

Description: If true then workload manager tries to mount a subsystem if it is not mounted yet

5.2.562 `WlmCluster: Entity`

parent: `Entity`

Parameter: `name`

Type: `string`

Description: Name

Parameter: `moduleFileTemplate`

Type: `string`

Description: Template content for system module file

Parameter: `primaryServer`

Type: reference to `Node` or `None`

Description: The WLM primary server (where the active WLM daemon will be running). This parameter has no effect in HA setup controlled by Bright.

Parameter: `topologySwitches`

Type: list of references to `Switch`

Description: List of switches that should be used to write the topology file

Parameter: `network`

Type: reference to `Network` or `None`

Description: Network that will be used to form FQDN node names

Parameter: `tracingJobs`

Type: list of strings

Description: A list of job ids to trace in `CMDaemon`

Parameter: `enablePrejob`

Type: `boolean`

Description: Enable Bright Cluster Manager powered prejob healthchecking in the workload manager

Parameter: accounting

Type: WlmAdvancedAccountingSettings or None

Description: Advanced accounting settings

5.2.563 WlmFairshareOverview: Entity

parent: Entity

Parameter: ref_wlm_cluster_uuid

Type: UUID

Description: WlmCluster

Parameter: fairshareTree

Type: free JSON object

Description: Accounting fairshare tree

5.2.564 WlmNodeCustomizationEntry: Entity

parent: Entity

Parameter: key

Type: string

Description: Name of the key

Parameter: value

Type: string

Description: Value for the key

Parameter: enabled

Type: boolean

Description: Add the key/value to workload menegment node configuration or not

Parameter: notes

Type: string

Description: Administrator notes

5.2.565 WlmNodeResource: Entity

parent: Entity

Parameter: name

Type: string

Description: Resource name (Example: gpu)

Parameter: extraName

Type: string

Description: Additional name (example: tesla)

Parameter: amount

Type: unsigned integer

Description: Resource amount

Parameter: unit

Type: boolean

Description: The unit the amount is expressed in

Parameter: ref_node_uuids

Type: list of unsigned numbers

Description: Node

Parameter: ref_wlm_cluster_uuid

Type: UUID

Description: WlmCluster

5.2.566 WlmSubmitRole: Role

parent: Role

5.2.567 ZTPNewSwitchSettings: Entity

parent: Entity

Parameter: ztpScriptTemplate

Type: string

Description: ZTP script template for new switches

Parameter: switchImage

Type: string

Description: Image loaded via ONIE

Parameter: keyValueSettings

Type: KeyValueSettings or None

Description: Key value settings which can be passed to the ZTP script

5.2.568 ZTPSettings: Entity

parent: Entity

Parameter: ztpScriptTemplate

Type: string

Description: ZTP script template

Parameter: switchImage

Type: string

Description: Image loaded via ONIE

Parameter: checkImageInBoot

Type: boolean

Description: Check image matches on boot, if not clear switch and start from scratch

Parameter: runZtpOnEachBoot

Type: boolean

Description: Run ZTP on each boot

Parameter: authorizedKeyFileRoot

Type: string

Description: Authorized key file to be copied for root user

Parameter: authorizedKeyFileCumulus

Type: string

Description: Authorized key file to be copied for cumulus user

Parameter: enableAPI

Type: boolean

Description: Enable

Parameter: enableExternalAccessAPI

Type: boolean

Description: Enable external access API instead of only localhost

Parameter: mergeKeyValueSettingsPartition

Type: boolean

Description: Merge key value settings partition

Parameter: keyValueSettings

Type: KeyValueSettings or None

Description: Key value settings which can be passed to the ZTP script

5.3 JSON Examples

complete.sh

```
#!/bin/bash
```

```
URL=https://localhost:8081/json/
```

```
user=root
```

```
pass=secretrootpassword
```

```
echo "===== login ====="
```

```
curl -c curl.cookiest.txt -i -k -X POST -d '{"service":"login", "username":"root", \
```

```
"password":"'${pass}'"}' $URL; echo
```

```
echo "===== master ====="
```

```
curl --cookie curl.cookiest.txt -i -k -X POST -d '{"service":"cmdevice","call":"getNode",\
```

```
"arg":"master"}' $URL; echo
```

```
echo "===== logout ====="
```

```
curl --cookie curl.cookiest.txt -i -k -X POST -d '{"service":"logout"}' $URL; echo
```

```
echo "===== denied ====="
```

```
curl --cookie curl.cookiest.txt -i -k -X POST -d '{"service":"cmdevice","call":"getNode",\
```

```
"arg":"master"}' $URL; echo
```

```
rm -f curl.cookiest.txt
```

```
echo "===== cert ====="
curl --cert $HOME/.cm/admin.pem --key $HOME/.cm/admin.key -i -k -X POST -d '{"service":\
"cmdevice","call":"getNode","arg":"master"}' $URL; echo
```

curl.sh

```
#!/bin/bash
```

```
URL=https://localhost:8081/json/
```

```
if [ -z "$1" ]; then
    read -p "pass: " -s $pass
else
    pass=$1
fi
```

```
curl -c curl.cookieiest.txt -i -k -X POST -d '{"service":"login", "username":"root", \

"call":"getBasicEntityInformation"}'
```

push_to_CMDaemon.sh

In the following example, the health check ManagedServicesOK, is pushed to CMDaemon with a FAIL value.

Example

```
[root@basecm10 ~]# cat push_to_CMDaemon.sh
#!/bin/bash
URL='https://master:8081/monitoring/push/ManagedServicesOk?info=bro1&class=Push/Single&healthcheck=yes'
value='FAIL'
curl --cert $HOME/.cm/admin.pem --key $HOME/.cm/admin.key -i -k -X POST -d "$value" $URL; echo
```

Its behavior can be verified by checking the latest value for ManagedServicesOK before and after the push_to_CMDaemon.sh script is run:

Example

```
[root@basecm10 ~]# curl --cert ~/.cm/admin.pem --key ~/.cm/admin.key -k
"https://master:8081/rest/v1/monitoring/latest?measurable=ManagedServicesOK&entity=basecm10&indent=1"
{
  "data": [
    {
      "age": 89.735,
      "entity": "basecm10",
```

```

    "measurable": "ManagedServicesOk",
    "raw": 0.0,
    "time": 1586450030968,
    "value": "PASS"
  }
]
}

[root@basecm10 ~]# ./push_to_CMDaemon.sh
HTTP/1.1 200 OK
Content-Length: 55
Content-Type: application/json

{
  "values": {
    "added": 1,
    "provided": 1
  }
}

[root@basecm10 ~]# curl --cert ~/.cm/admin.pem --key ~/.cm/admin.key -k
"https://master:8081/rest/v1/monitoring/latest?measurable=ManagedServicesOK&entity=basecm10&indent=1"
{
  "data": [
    {
      "age": 3.357,
      "entity": "basecm10",
      "info": "brol",
      "measurable": "ManagedServicesOk",
      "raw": 2.0,
      "time": 1586450124437,
      "value": "FAIL"
    }
  ]
}

```

A metric version of the push, using the measurable push-test-02 might look like:

```

#!/bin/bash
URL='https://localhost:8081/monitoring/push/push-test-02?info=brol&class=Push/Single&unit=s'
value=$(date +%s)
curl --cert $HOME/.cm/admin.pem --key $HOME/.cm/admin.key -i -k -X POST -d "$value" $URL; echo

```

A collection can be pushed as follows: To initialize (once):

```

#!/bin/bash
URL='https://localhost:8081/monitoring/initialize'
curl --cert $HOME/.cm/admin.pem --key $HOME/.cm/admin.key -i -k -X POST -d \
' [{"metric": "push-collection-01", "class": "Push/Collection"}, {"metric": "push-collection-02", \
"class": "Push/Collection"} ]' $URL; echo

```

After initializing, sampling can be done with:

```

#!/bin/bash
URL='https://localhost:8081/monitoring/push'
curl --cert $HOME/.cm/admin.pem --key $HOME/.cm/admin.key -i -k -X POST -d \
' [{"metric": "push-collection-01", "value": 31}, {"metric": "push-collection-02", "value": 32, "info" \
: "Some message"} ]' $URL; echo

```
