Rights and Restrictions
All statements, specifications, recommendations, and technical information contained herein are current or planned as of the date of publication of this document. They are reliable as of the time of this writing and are presented without warranty of any kind, expressed or implied. NVIDIA Corporation shall not be liable for technical or editorial errors or omissions which may occur in this document. NVIDIA Corporation shall not be liable for any damages resulting from the use of this document.

Limitation of Liability and Damages Pertaining to NVIDIA Corporation
The NVIDIA Base Command Manager product principally consists of free software that is licensed by the Linux authors free of charge. NVIDIA Corporation shall have no liability nor will NVIDIA Corporation provide any warranty for the NVIDIA Base Command Manager to the extent that is permitted by law. Unless confirmed in writing, the Linux authors and/or third parties provide the program as is without any warranty, either expressed or implied, including, but not limited to, marketability or suitability for a specific purpose. The user of the NVIDIA Base Command Manager product shall accept the full risk for the quality or performance of the product. Should the product malfunction, the costs for repair, service, or correction will be borne by the user of the NVIDIA Base Command Manager product. No copyright owner or third party who has modified or distributed the program as permitted in this license shall be held liable for damages, including general or specific damages, damages caused by side effects or consequential damages, resulting from the use of the program or the un-usability of the program (including, but not limited to, loss of data, incorrect processing of data, losses that must be borne by you or others, or the inability of the program to work together with any other program), even if a copyright owner or third party had been advised about the possibility of such damages unless such copyright owner or third party has signed a writing to the contrary.

Preface

Welcome to the Developer Manual for NVIDIA Base Command Manager 10.

0.1 About This Manual

This manual is aimed at helping developers who would like to program the NVIDIA Base Command Manager in order to enhance or alter its functionality. It is not intended for end users who simply wish to submit jobs that run programs to workload managers, which is discussed in the User Manual. The developer is expected to be reasonably familiar with the parts of the Administrator Manual that is to be dealt with—primarily CMDaemon, of which cmsh and cmgui are the front ends.

This manual discusses the Python API to CMDaemon, and also covers how to program for metric collections.

0.2 About The Manuals In General

Name Changes From Version 9.2 To 10

The cluster manager software was originally developed by Bright Computing and the name “Bright” featured previously in the product, repositories, websites, and manuals.

Bright Computing was acquired by NVIDIA in 2022. The corresponding name changes, to be consistent with NVIDIA branding and products, are a work in progress. There is some catching up to do in places. For now, some parts of the manual still refer to Bright Computing and Bright Cluster Manager. These remnants will eventually disappear during updates.

BCM in particular is a convenient abbreviation that happens to have the same letters as the former Bright Cluster Manager. With the branding change in version 10, Base Command Manager is the official full name for the product formerly known as Bright Cluster Manager, and BCM is the official abbreviation for Base Command Manager.

Regularly updated versions of the NVIDIA Base Command Manager 10 manuals are available on updated clusters by default at /cm/shared/docs/cm. The latest updates are always online at https://docs.nvidia.com/base-command-manager.

- The Administrator Manual describes the general management of the cluster.
- The Installation Manual describes installation procedures for a basic cluster.
- The User Manual describes the user environment and how to submit jobs for the end user.
- The Cloudbursting Manual describes how to deploy the cloud capabilities of the cluster.
- The Developer Manual has useful information for developers who would like to program with BCM.
- The Edge Manual describes how to deploy BCM Edge with BCM.
- The Machine Learning Manual describes how to install and configure machine learning capabilities with BCM.
- The Containerization Manual describes how to manage containers with BCM.
If the manuals are downloaded and kept in one local directory, then in most pdf viewers, clicking on a cross-reference in one manual that refers to a section in another manual opens and displays that section in the second manual. Navigating back and forth between documents is usually possible with keystrokes or mouse clicks.

For example: <Alt>-<Backarrow> in Acrobat Reader, or clicking on the bottom leftmost navigation button of xpdf, both navigate back to the previous document.

The manuals constantly evolve to keep up with the development of the BCM environment and the addition of new hardware and/or applications. The manuals also regularly incorporate feedback from administrators and users, and any comments, suggestions or corrections will be very gratefully accepted at manuals@brightcomputing.com.

There is also a feedback form available via Base View, via the Account icon, following the click-path:

 outing > Help — Feedback

0.3 Getting Administrator-Level Support

Support for BCM subscriptions from version 10 onwards is available via the NVIDIA Enterprise Support page at:

Section 16.2 of the Administrator Manual has more details on working with support.

0.4 Getting Developer-Level Support

Developer support is given free, within reason. For more extensive support, the BCM support team can be contacted in order to arrange a support contract.

0.5 Getting Professional Services

The BCM support team normally differentiates between

• regular support (customer has a question or problem that requires an answer or resolution), and

• professional services (customer asks for the team to do something or asks the team to provide some service).

Professional services can be provided via the NVIDIA Enterprise Services page at:
This chapter introduces the Python API of NVIDIA Base Command Manager.

The Python API package was completely overhauled in NVIDIA Base Command Manager 8.2. The `cmdaemon-pythoncm` package now provides a pure Python connection to the cluster manager, making it possible for cluster administrators to automate cluster operations via Python.

It also makes it possible to run Python code on any operating system that supports Python 3.5 and higher.

The BCM Python API uses the following extra modules:

1. pyOpenSSL
2. ply
3. lxml
4. tabulate
5. monotonic
6. humanfriendly
7. six

1.1 Getting Started

On the cluster head node itself the python3 module can simply be loaded:

Example

```
[root@basecm10 ~]# module load python3
```

To execute or develop the Python code on any other machine usually requires some extra steps:

- Python 3 (3.5, 3.6, 3.7, 3.8 will work) should be installed
- The 7 extra modules listed previously should be installed using Pip
- The `/cm/local/apps/cmd/pythoncm/lib/python3.9/site-packages/pythoncm` directory should be copied over to the site-packages directory of the development machine

The pythoncm module should then be loaded, to confirm everything was set up correctly:

Example
# NVIDIA Base Command Manager Python API

[alice@desktop ~]# python -c "import pythoncm"

If connecting from outside the cluster, then port 8081 must not be blocked by a firewall. A certificate is needed by the Python API to identify itself to CMDaemon. The existence of the certificate on the head node should be checked. It should be copied over to the development machine, if it is needed there.

Example

[root@basecm10 ~]# ls -al .cm/
-rw------- 1 root root 1708 Dec 11 09:25 admin.key
-rw------- 1 root root 1269 Dec 11 09:25 admin.pem

Example

[alice@basecm10 ~]# ls -al .cm/
-rw------- 1 root root 1708 Dec 11 09:25 cert.key
-rw------- 1 root root 1269 Dec 11 09:25 cert.pem

The developer may need to contact the cluster administrator to get a certificate.

## 1.2 Connecting To A Cluster

The first step when working with the Python API is to establish a connection to the CMDaemon process on the cluster:

```bash
#!/usr/bin/env python
from pythoncm.cluster import Cluster
from pythoncm.settings import Settings
cluster = Cluster()
```

If working outside the cluster, then the settings for connecting to the cluster must be specified:

```python
settings = Settings(host='head-node-hostname',
                    port=8081,
                    cert_file='/some/path/cert.pem',
                    key_file='/some/path/cert.key',
                    ca_file='.../site-packages/pythoncm/etc/cacert.pem')
if not settings.check_certificate_files():
    print('Unable to load certificates')
else:
    cluster = Cluster(settings)
```

## 1.3 Inspecting Settings

All settings in BCM are stored inside an entity. Each entity has a type and a unique name among the entities of the same type. To inspect an entity it should first be found inside the cluster:

```python
node001 = cluster.get_by_name('node001')
```

If the name node001 was also given a different entity, then the type must be specified to ensure that the correct entity is returned:

```python
node001 = cluster.get_by_name('node001', pythoncm.entity.Node)
node001 = cluster.get_by_name('node001', 'Node')
```
Once the node entity is found, inspecting the settings is a matter of printing the desired field:

```python
print(node001.hostname)
print(node001.mac)
```

Complex settings, such as network interfaces, have their own settings:

```python
for interfaces in node001.interfaces:
    print(interface.name, interface.ip)
```

Because many nodes could have a network interface called `eth0`, such a setting cannot be found from the cluster: The following code will return `None`.

```python
eth0 = cluster.get_by_name('eth0')
```

To find all `eth0` interfaces, all nodes need to be found, and then iterated over:

```python
nodes = cluster.get_by_type(pythoncm.entity.Node)
all_eth0 = [interface
            for node in nodes
            for interface in node.interfaces
            if interface.name == 'eth0']
```

## 1.4 Modifying Settings

Basic entity settings are exported as Python properties and can simply be changed:

```python
node001.mac = '00:00:00:00:00:00'
node001.category = cluster.get_by_name('gpu', 'Category')
```

Similarly interfaces settings can be accessed and changed directly:

```python
node001.interfaces[0].ip = '1.2.3.4'
node001.interfaces[0].network = cluster.get_by_name('ib', 'Network')
```

Removing an interface from a node can be done in various Pythonic ways:

```python
node001.interfaces.remove(0)
del node001.interfaces[0]
node001.interfaces = [interface for interface in node001.interfaces
if interface.name != 'eth0']
```

To add a new interface, the entity instance needs to be created first, and then added to the node:

```python
eth1 = pythoncm.entity.NetworkPhysicalInterface()
eth1.name = 'eth1'
eth1.ip = '1.2.3.4'
eth1.network = cluster.get_by_name('ib', 'Network')
node001.interfaces.append(eth1)
```

All changes are made on a local copy of the entity. The cluster has no knowledge of the changes until they are committed.

It is recommended to make many changes locally, and only commit once at the end.

The return value of the commit operation should always be checked.

Committing a badly-configured node will be blocked by the head node:

```python
commit_result = node001.commit()
if not commit_result.good:
    print(commit_result)
```

An entity found from via the `cluster` object is removed differently.

As with commit, the result should always be checked: a removal can fail if a node is UP:

```python
remove_result = node001.remove()
if not remove_result.good:
    print(remove_result)
1.5 Inspecting The Entire Cluster

The example directory contains a script to inspect the entire cluster.

Example

[root@basecm10 ~]# cd /cm/local/examples/cmd/pythoncm/
[root@basecm10 pythoncm]# module load python3
[root@basecm10 pythoncm]# ./print-all.py

The example directory also contains a script that prints all metadata for all available entities in BCM:

Example

[root@basecm10 pythoncm]# ./entity_info.py

1.6 Performing Operations On Entities

All Python API functionality is contained in /cm/local/apps/cmd/pythoncm/lib/python3.9/site-packages/pythoncm.

Methods are documented inside the python code itself.

node001 = cluster.get_by_name('node001')
node001.power_on()

When operating on multiple entities, it is possible to iterate over them and do each operation individually.

nodes = cluster.get_by_type('Node')
for node in nodes:
    node.power_on()

However the same can also be done with a parallel version of the operation. When possible the parallel version should be used, because it is faster and requires less network traffic.

nodes = cluster.get_by_type('Node')
cluster.parallel.power_on(nodes)

1.7 Monitoring

All monitoring data can be accessed using the Python API.

Monitoring is a set of operations performed on entities.

For example, to get latest data for a single entity:

print(node001.get_latest_monitoring_data())

Monitoring operations on multiple operations should be done using the monitoring module:

data = cluster.monitoring.get_latest_monitoring_data([node001, node002, node003])

1.8 Examples

The best way to get going is by looking at the examples. These can be found on the head node, at /cm/local/examples/cmd/pythoncm:

Example
1.8 Examples

The examples can be tried out after loading the Python environment:

Example

```
[root@basecm10 ~]# cd /cm/local/examples/cmd/pythoncm/
[root@basecm10 pythoncm]# module load python3
[root@basecm10 pythoncm]# ./power-status.py
success: True

Monitoring Data Producers

This chapter covers how to add a new metrics and health checks scripts with cmsh.

Five different types of Monitoring Data Producers can be added:

- **metric**: a script which produces a single value.
- **health check**: a script which produces a PASS, FAIL, UNKNOWN, or no data value.
- **collection**: a script that produces zero or more metrics, health checks, or a combination of both.
- **perpetual**: a script that is started once over the lifetime of the BCM cmd process. The script produces zero or more metrics, health checks, or a combination of both on its own timing mechanism.
- **prometheus**: one or more URLs to Prometheus metric exporters.

A monitoring data producer cannot be plotted in cmsh or Base View, because it contains no data. A producer defines measurables: metrics and/or health checks. It also generates data for these measurables, which can be plotted.

### 2.1 Measurables

There are three types of measurable:

- **metric**: a numeric value, or no data.
- **health check**: PASS/FAIL/UNKNOWN/no data.
- **enum metric**: one of a set of user-defined string based values, or no data.

### 2.2 Measurables Classes

All measurables are grouped into classes. A class is a user-defined free string field, with / as delimiters. Base View uses this class to build a tree for easy search and access.

### 2.3 Metric Monitoring Data Producers

A metric data producer script generates one data point. For example, as in the following script:

```
[root@basecm10 ~]# cat /path/to/my/metric
#!/bin/bash
echo $(RANDOM)
# Optionally provide extra information
echo "Extra information" >&3
```
The script can be defined as a metric script via the monitoring setup mode of cmsh:

Example

```
[basecm10]\% monitoring setup
[basecm10->monitoring->setup]\% add metric my-metric
[...my-metric]\% set script /path/to/my/metric
[...my-metric]\% set class My/Class
[...my-metric]\% set unit B
[...my-metric]\% set interval 1m
[...my-metric]\% commit
```

All nodes then execute the script every minute, and produce a random number.

### 2.4 Health Check Monitoring Data Producers

A health check data producer script generates one data point. The data point can be one of four possible values expected of it: **PASS**, **FAIL**, **UNKNOWN**, or **no data**. Other file descriptors can be used to provide extra information.

For example, as in the following script:

Example

```
[root@basecm10 ~]\# cat /path/to/my/health-check
#!/bin/bash
if [ $((RANDOM)) -gt 8000 ]; then
    echo "PASS"
else
    echo "FAIL"
    # Optionally provide extra information
    echo "Extra information" >&3
fi
```

The script can be defined as a health check script via the monitoring setup mode of cmsh:

Example

```
[basecm10]\% monitoring setup
[basecm10->monitoring->setup]\% add healthcheck my-health-check
[...my-check]\% set script /path/to/my/health-check
[...my-check]\% set class My/Class
[...my-check]\% set interval 1m
[...my-check]\% commit
```

All nodes then execute the script every minute, and produce data values with roughly 75% **PASS** and 25% **FAIL**.

### 2.5 Collection Monitoring Data Producers

A **collection data producer** script can generate multiple data points in one run. Data points can be a combination of metrics and health checks. Collection scripts are also allowed to produce no data.

A collection script has two modes: initialize mode and sample mode.

- **initialize**: defines the measurables that data values are generated for.
- **sample**: returns the data values for all the measurables defined in initialize mode.
During normal cluster operation the initialize mode is called only once, during boot. Afterwards, the script is called in sample mode at the desired interval.

The following example combines both of the metric and health check examples from earlier on. However, this time it is written as a single script, using JSON as the output format:

Example

[root@basecm10 ~]# cat /path/to/my/collection
#!/usr/bin/python
import sys
import json
import random

def initialize():
    metric = {
        "metric": "my.collection.metric",
        "unit": "B",
        "class": "My/Collection"
    }
    check = {
        "check": "my.collection.check",
        "class": "My/Collection"
    }
    return [metric, check]

def sample():
    metric = {
        "metric": "my.collection.metric",
        "value": random.randint(0, 32767)
    }
    check = {
        "check": "my.collection.check",
        "info": "random with 25% failure rate",
        "value": 'PASS' if random.randint(0, 32767) > 8000 else 'FAIL'
    }
    return [metric, check]

def main():
    if len(sys.argv) > 1 and sys.argv[1] == "--initialize":
        data = initialize()
    else:
        data = sample()
    print (json.dumps(data, indent=4))

if __name__ == '__main__':
    main()

The script can be defined as a collection script via the monitoring setup mode of cmsh:

Example

[basecm10]$ monitoring setup
[basecm10->monitoring->setup]$ add collection my-collection
[...my-collection]$ set script /path/to/my/collection
[...my-collection]$ set format JSON
[...my-collection]$ set interval 1m
[...my-collection]$ commit

All nodes then execute the script every minute and produce two data points upon each execution. That is, one metric and one health check per execution.

2.6 Perpetual Monitoring Data Producers

A perpetual data producer script is a special case of a collection data producer script. It is intended to be used if the script needs permanent memory storage.
Example

```python
#!/usr/bin/python
import my_sampler_module
import json
import time

# create single instance
sampler = my_sampler_module.MySampler()
# load important data into memory
sampler.load()

# Infinite loop with its own timing
delay = 0
while True:
    time.sleep(delay)
    (definitions, values, delay) = sampler.process()
    if definitions:
        # Print new measurables
        print(json.dumps(definitions))
    # Print data
    print(json.dumps(values))
```

The `my_sampler_module` is the part which does the important work.

Example

```python
class MySampler:
    def __init__(self):
        self.initialized = False
        self.definitions = None

    def load(self):
        # Do time consuming work here
        metric = {
            "metric": "my.collection.metric",
            "unit": "B",
            "class": "My/Collection"
        }
        check = {
            "check": "my.collection.check",
            "class": "My/Collection"
        }
        self.definitions = [metric, check]

    def process(self):
        metric = {
            "metric": "my.collection.metric",
            "value": random.randint(0, 32767)
        }
        check = {
            "check": "my.collection.check",
            "value": 'PASS' if random.randint(0, 32767) > 8000 else 'FAIL'
        }
        values = metric, check
        # return definitions once, afterwards they never change
        # but new definitions could be added this way
        definitions = self.definitions
        self.definitions = None
        return definitions, values, 60
```

The script can be defined as a perpetual script via the monitoring setup mode of cmsh:
2.7 Prometheus Monitoring Data Producers

Prometheus is a monitoring and alerting toolkit (https://prometheus.io). A Prometheus monitoring data producer script parses data from a Prometheus exporter (https://prometheus.io/docs/instrumenting/exporters/)

The script can be defined as a Prometheus script via the `monitoring setup` mode of cmsh:

Example

```
[basecm10]% monitoring setup
[basecm10->monitoring->setup]% add perpetual my-perpetual
[...my-perpetual]% set script /path/to/my/perpetual
[...my-perpetual]% set format JSON
[...my-perpetual]% commit
```

2.8 Node Execution Filters

By default a monitoring data producer script is executed on every node. When this is not desirable, a node execution filter should be created. A node execution filter defines the nodes on which the producer script should be executed.

For example, a filter to execute the script only on cloud nodes can be configured as follows:

Example

```
[basecm10]% monitoring setup use my-check
[...my-check]% nodeexecutionfilters
[...nodeexecutionfilters]% add type Cloud
[...nodeexecutionfilters*[Cloud*]]% set cloudnode yes
[...nodeexecutionfilters*[Cloud*]]% show
Parameter  Value
------------------ ----------------------------
Base type       MonitoringExecutionFilter
Name            Cloud
Type             Type
Head node        no
Physical node    no
Cloud node       yes
Virtual node     no
Lite node        no
[...nodeexecutionfilters*[Cloud*]]% commit
```

It is also possible to filter based on the specific resources associated with a node:

Example

```
[basecm10]% monitoring setup use my-IB-check
[...my-IB-check]% nodeexecutionfilters
```
Because of high availability, a special resource, active, is defined for the active head node.

Example

[basecm10]% monitoring setup use my-metric
[...my-metric]% nodeexecutionfilters
[...nodeexecutionfilters]% active
Added active resource filter
[...nodeexecutionfilters]% commit

2.9 Execution Multiplexers

By default a monitoring data producer script is executed once: the node executes the script only for itself.

However, some scripts, such as BMC samplers, must be sampled from the active head node for all nodes.

In the following example a BMC script is run on each node that has the ipmi or drac resource:

Example

[basecm10]% monitoring setup use my-ipmi-collection
[...my-ipmi-collection]% executi onmultiplexers
[...execut i onmultiplexers]% add resource ipmi
[...execut i onmultiplexers][ipmi%] set resources ipmi drac
[...execut i onmultiplexers][ipmi%] set operator OR
[...execut i onmultiplexers][ipmi%] commit

If an execution multiplexer <multiplexer> is defined, then there should also be a node execution filter <filter> associated with it to restrict the number of nodes on which the script runs.

This is because having the script run on many nodes for many other nodes is unlikely to be a desired configuration.

The combination of the execution filter and the multiplexer should be read as:

for every node that matches filter, run script, for each node that matches multiplexer.

A more specific example, using two of the preceding examples, with a filter based on the resource IB, and multiplexers based on the IPMI/Drac resources, the combination should be read as:

for every node that matches IB, run script, for each node that matches ipmi or drac.

2.10 Monitoring Resources

Every device in BCM has one or more resources. These resources are automatically calculated from:

- Roles
- Hardware
- Settings

Resources for a specific node can be viewed as follows:
Example

[bascm10]$ device use node001
[bascm10]$ monitoringresources
CentOS7u5 Ethernet
category:default

It is possible to add one or more custom resources to a device:

Example

[bascm10]$ device use node001
[bascm10]$ add userdefinedresources MyResource
[bascm10]$ append userdefinedresources MyOtherResource
[bascm10]$ # wait ~10 seconds for the settings to propagate
[bascm10]$ monitoringresources
CentOS7u5 Ethernet
category:default
MyResource
MyOtherResource

Any of these resources can be used to filter and multiplex monitoring data producers.
If a resources changes because of a settings change, then monitoring automatically stops or starts sampling.

2.11 Collection Monitoring Data Producers With Filter And Multiplexer

If a script has an execution multiplexer set, then it needs to determine for which nodes the script runs:

Example

[root@basecm10 ~]# cat /path/to/my/collection
#!/usr/bin/python
import sys
import json
import random

def initialize(entity):
    metric = {
        "metric": "my.collection.metric",
        "entity": entity,
        "unit": "B",
        "class": "My/Collection"
    }
    check = {
        "check": "my.collection.check",
        "entity": entity,
        "class": "My/Collection"
    }
    return [metric, check]

def sample(entity):
    metric = {
        "metric": "my.collection.metric",
        "entity": entity,
        "value": random.randint(0, 32767)
    }
    check = {
        "check": "my.collection.check",
        "entity": entity,
        "value": 'PASS' if random.randint(0, 32767) > 8000 else 'FAIL'"}
return [metric, check]

def main():
    try:
        # determine for which node we are sampling
        entity = os.environ['CMD_HOSTNAME']
    except:
        sys.stderr.write('Target device not specified in environment\n')
        return

    if len(sys.argv) > 1 and sys.argv[1] == "--initialize":
        data = initialize(entity)
    else:
        data = sample(entity)
    print (json.dumps(data, indent=4))

if __name__ == '__main__':
    main()

    It can be defined with a filter to run on the active head for all nodes in the GPU category:

Example

    [basecm10]% monitoring setup
    [basecm10->monitoring->setup]% add collection my-collection
    [...]my-collection]% set script /path/to/my/collection
    [...]my-collection]% set format JSON
    [...]my-collection]% set interval 1m
    [...]my-collection]% nodeexecutionfilters
    [...]nodeexecutionfilters]% active
    Added active resource filter
    [...]nodeexecutionfilters]% exit
    [...]my-collection]% executionmultiplexers
    [...]executionmultiplexers]% add category
    [...]executionmultiplexers*[GPU]*% add category GPU
    [...]executionmultiplexers*[GPU]*% commit

        The script is then executed on the head, once for each node in the category of GPU.

2.12 Collection Monitoring Data Producers For Standalone Entities

Sometimes monitoring data does not belong to a BCM entity.

For this reason the standalone monitored entity was added in NVIDIA Base Command Manager 8.0.

This entity can be anything with a name and custom type.

BCM does nothing with this kind of entity, except allow it to store monitoring data.

Each standalone entity which needs to be monitored should be added:

Example

    [basecm10]% monitoring standalone
    [basecm10->monitoring->standalone]% add MSD.0
    [...]standalone*[MSD.0*]% set type Lustre
    [...]standalone*[MSD.0*]% commit
    [...]standalone*[MSD.0*]% add MSD.1
    [...]standalone*[MSD.1*]% set type Lustre
    [...]standalone*[MSD.1*]% commit
A script can be created that produces data for all MSD entities:

**Example**

```
#!/usr/bin/python
import sys
import json

def initialize():
    msd_0 = {
        "metric": "lustre.free.space",
        "entity": "MSD.0",
        "unit": "B",
        "class": "Lustre"
    }
    msd_1 = {
        "metric": "lustre.free.space",
        "entity": "MSD.1",
        "unit": "B",
        "class": "Lustre"
    }
    return [msd_0, msd_1]

def sample():
    msd_0 = {
        "metric": "lustre.free.space",
        "entity": "MSD.0",
        "value": 12345
    }
    msd_1 = {
        "metric": "lustre.free.space",
        "entity": "MSD.1",
        "value": 54321
    }
    return [msd_0, msd_1]

def main():
    if len(sys.argv) > 1 and sys.argv[1] == "--initialize":
        data = initialize()
    else:
        data = sample()
    print (json.dumps(data, indent=4))

if __name__ == '__main__':
    main()
```

It can be defined to run on only the active head node:

**Example**

```
[basecm10]$ monitoring setup
[basecm10]->monitoring->setup$% add collection my-collection
[...my-collection]$ set script /path/to/my/collection
[...my-collection]$ set format JSON
[...my-collection]$ set interval 5m
[...my-collection]$ nodeexecutionfilters
[...nodeexecutionfilters]$ active
Added active resource filter
[...nodeexecutionfilters]$ commit
```

The script is then executed on the active head every 5 minutes and collects one data point for each MSD.

Data for a standalone script can be viewed with the same commands as for regular BCM nodes.
Example

```bash
[basecm10] % monitoring standalone
[basecm10--monitoring--standalone] % use MSD.0
[...standalone+[MSD.0*]] % latestmetricdata
...
 Lustre.free.space 12345 3m 47s
```

2.13 Debugging Standalone Scripts

Page 615 of the *Administrator Manual* describes how debugging information can be obtained when running `samplenow` with the `--debug` option with the `ntp healthcheck` script.

Many scripts under `/cm/local/apps/cmd/scripts/` can have their debug output inspected with `samplenow --debug`.

A recursive grep on the head node, similar to the following, should show which scripts have a settable debug environment:

```bash
grep -r CMD_DEBUG /cm/local/apps/cmd/scripts/
```

The debug output in the script can be specified along the lines of the following code snippet:

Example

```python
debug = os.environ.get('CMD_DEBUG', '0') == '1'
if debug:
    # print stuff to fd 3
```
Monitoring Actions

This chapter covers how to manage monitoring-driven actions with \texttt{cmsh}.

3.1 Actions And Triggers

A monitoring action is a script that is executed by CMDaemon. It runs when triggered by the monitored data.

An action by itself does nothing—it needs a trigger (section 12.4.5 of the \textit{Administrator Manual}) to be defined to execute the action.

By default, several actions (section 12.4.4 of the \textit{Administrator Manual}) are predefined:

- \texttt{Drain}: Drain node (node refuses new WLM jobs)
- \texttt{Event}: Send an event to users with connected client
- \texttt{ImageUpdate}: Update the image on the node
- \texttt{PowerOff}: Power off a device
- \texttt{PowerOn}: Power on a device:
- \texttt{PowerReset}: Power reset a device
- \texttt{Reboot}: Reboot a node
- \texttt{Send e-mail to administrators}: Send e-mail
- \texttt{Shutdown}: Shutdown a node
- \texttt{Undrain}: Undrain node (node accepts new WLM jobs)
- \texttt{killprocess}: /cm/local/apps/cmd/scripts/actions/killprocess.pl
- \texttt{remount}: /cm/local/apps/cmd/scripts/actions/remount
- \texttt{testaction}: /cm/local/apps/cmd/scripts/actions/testaction

A new action script can be created as follows:

\textbf{Example}

\begin{verbatim}
[basecm10]\% monitoring action
[basecm10->monitoring->action]\% add script MyScript
[...MyScript*]\% set script /path/to/MyScript
[...MyScript*]\% commit
\end{verbatim}
3.2 Time Restrictions

It is possible to allow actions to only be executed at certain times, with the `allowedtime` setting.

**Example**

```
[basecm10]% monitoring action
[basecm10->monitoring->action]% add script MyScript
[...MyScript*]% set script /path/to/MyScript
[...MyScript*]% set allowedtime "9:00-17:00"
[...MyScript*]% commit
```

More complex timing restrictions are possible:

**Example**

```
monday-friday00:00-17:00
monday-friday00:00-09:00;17:00-00:00;saturday-sunday
may-septembermonday-saturday13:00-17:00
```

Further examples can be seen in section 12.4.4 of the *Administrator Manual*, page 587.

### 3.2.1 Time Restriction Syntax in BNF Notation

The allowed values can be written as a BNF grammar:

**Example**

```
<start> =
    <time_intervals> | 

<time_intervals> = <time_interval> (; <time_interval>)*

<time_interval> = <inner_time_interval>{<time_intervals}

<inner_time_interval> =
    <day_of_week_interval>
    | <time_of_day_interval>
    | <day_of_month_interval>
    | <month_interval>

<day_of_week_interval> =
    (<day_of_week>-<day_of_week>)
    | (<day_of_week> (, day_of_week)*)

<day_of_week> = sunday | monday | tuesday | wednesday | thursday | friday | saturday

<time_of_day_interval> = <time_of_day>-<time_of_day>

<time_of_day> = \d?\d:\d\d

<month_interval> = (<month>-<month>)
    | (<month>, <month>)

<month> = january | february | march | april | may | june | july | august | september
    | october | november | december

<day_of_month_interval> = (<day_of_month>-<day_of_month>)
    | (<day_of_month> (, day_of_month)*)

<day_of_month> = \d\d
```

3.3 CMDaemon Environment Variables

3.3.1 Standard Environment Variables Available in Action Scripts
### 3.3 CMDaemon Environment Variables

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CMD_ENTITY_KEY</td>
<td>The unique key of the entity that triggered the action.</td>
</tr>
<tr>
<td>CMD_ENTITY_NAME</td>
<td>The name of the entity that triggered the action.</td>
</tr>
<tr>
<td>CMD_ENTITY_TYPE</td>
<td>The type of entity that triggered the action.</td>
</tr>
<tr>
<td>CMD_MEASURABLE_NAME</td>
<td>The name of the measurable that triggered the action.</td>
</tr>
<tr>
<td>CMD_MEASURABLE_PARAMETER</td>
<td>The parameter of the measurable that triggered the action.</td>
</tr>
<tr>
<td>CMD_MEASURABLE_TYPE</td>
<td>The type of the measurable.</td>
</tr>
<tr>
<td>CMD_VALUE</td>
<td>The value that triggered the action.</td>
</tr>
<tr>
<td>CMD_RAW_VALUE</td>
<td>The raw value.</td>
</tr>
<tr>
<td>CMD_VALUE_TIME</td>
<td>The time on which the value was measured.</td>
</tr>
<tr>
<td>CMD_INFO_MESSAGE</td>
<td>Extra information sampled along with the value.</td>
</tr>
<tr>
<td>CMD_PRODUCER_NAME</td>
<td>The name of the monitoring data producer that samples the measurable.</td>
</tr>
</tbody>
</table>

...continues
All action scripts have the preceding standard environment variables set.

In cmsh, if the action object has its `node environment` parameter set to the value `yes`, then scripts running on a node are enabled with an extended environment that provides many more `CMD_*` environment variables. Otherwise they run in the standard environment.

A list of the standard or extended environment variables can be dumped by running the system command `env > /tmp/dumpfile` within an action script, such as the test example script, and triggering the script to run.

Many of the environment variables are similar to the ones used by initialize and finalize scripts (section E.3 of the `Administrator Manual`) in the node-installer environment.

### 3.3.2 Extended Environment Variables Available To Action Scripts

If the action object has its `node environment` parameter set to the value `yes`, then scripts run in an extended environment that provides many more `CMD_*` environment variables. Otherwise they run in the standard environment of section 3.3.1.

The following table shows the additionally available environment variables with some example values:

<table>
<thead>
<tr>
<th>Variable</th>
<th>Example Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>CMD_ACTIVE_MASTER_IP</td>
<td>10.141.255.254</td>
</tr>
<tr>
<td>CMD_ADDED_NODES</td>
<td></td>
</tr>
</tbody>
</table>

CMDaemon REST API

Some data from CMDaemon can be accessed via its REST API.

The REST API only allows data to be retrieved at the time of writing of this section (October 2018). Data cannot currently be updated or removed.

4.1 Authentication, And Definition Of <curlauth>

Two forms of authentication are supported:

- Basic: HTTP authentication (--basic option of curl)

The following three commands give identical results:

```
$ curl -k --basic --user "alice:password" "https://master:8081/rest"
$ curl -k --basic --user "alice:$(path to password file)" "https://master:8081/rest"
$ curl --cert ~/.cm/cert.pem --key ~/.cm/cert.key -k "https://master:8081/rest"
```

For security, it is best to use the certificate key-based version.

For convenience, the command and authority parts of the preceding three commands—that is the string in the line that includes the text from curl to 8081 in the three curl commands—is designated by <curlauth> in this chapter. Thus, each of the commands can be represented by:

Example

```
$ <curlauth>/rest
```

This allows the reader to focus on the path segment and variables part of the API.

4.2 Browsing The API

A summary diagram of the REST API is shown in figure 4.1:
The remainder of this section elaborates upon the diagram. The API directory structure is documented within the directory itself.

A GET operation on the main /rest entry point can list all subdirectories:

Example

```
[alice@basecm10 ~]$ <curlauth>/rest
"v1"
```
New lines are not part of the output by default. Setting a parameter of 1 or 2 for the `indent` variable uses newlines and an indentation of one or two spaces, which makes the API output more readable for all API resource paths.

**Example**

```
[alice@basecm10 ~]$ curlauth /rest?indent=1
[
  "v1"
]
```

Appending `/v1` to the URL gives the functionality available in the first version of the REST API.

**Example**

```
[alice@basecm10 ~]$ curlauth /rest/v1?indent=1
[
  "monitoring",
  "status",
  "session",
  "check",
  "version",
  "license",
  "sysinfo",
  "device",
  "workload",
  "event"
]
```

Appending `/monitoring` to the URL lists the subdirectory functionality available for monitoring.

**Example**

```
[alice@basecm10 ~]$ curlauth /rest/v1/monitoring?indent=1
[
  "entity",
  "measurable",
  "latest",
  "dump",
  "usage"
]
```

4.2.1 Returning A Status Using `/v1/status`

The `status` resource path returns the UP/DOWN status for all devices:

**Example**

```
[alice@basecm10 ~]$ curlauth /rest/v1/status?indent=2
[
  {
    "hostname": "basecm10",
    "status": "UP"
  },
  {
    "hostname": "node001",
    "status": "UP"
  }
]"
The status can also be requested for a single device:

Example

```
[alice@basecm10 ~]$ curl -X GET /rest/v1/status?name=node001&indent=2
```

```
[ { 
  "hostname": "node001", 
  "status": "UP" 
}]
```

The “two dots” list specification format (section 2.5.5 of the Administrator Manual) used in Base View and cmsh can also be used in the API:

Example

```
[alice@basecm10 ~]$ curl -X GET /rest/v1/status?name=node001..node002&indent=2
```

```
[ { 
  "hostname": "node001", 
  "status": "UP" 
}, 
{ 
  "hostname": "node002", 
  "status": "DOWN" 
}]
```

For more detailed information, the verbose parameter can be added (output truncated):

Example

```
[alice@basecm10 ~]$ curl -X GET /rest/v1/status?verbose=1&indent=2
```

```
[ { 
  "health_check_failed": true, 
  "health_check_unknown": false, 
  "hostname": "basecm10", 
  "provisioning_failed": false, 
  "restart_required": false, 
  "status": "UP" 
}, 
{ 
  "health_check_failed": true, 
  "health_check_unknown": false, 
  "hostname": "node001", 
  "provisioning_failed": false, 
  ...
}]
```
4.2.2 Monitoring Using /v1/monitoring

Entities Via /v1/monitoring/entity

The entity resource returns information about the entities that are known to the monitoring system. It is possible for an entity known to the monitoring system to have no data.

Example

```
[alice@basecm10 ~]$ curl -H "Authorization: $auth" /rest/v1/monitoring/entity?indent=1
{
  "entities": [
  {
    "key": 12884901889,
    "name": "default",
    "type": "Category"
  },
  {
    "key": 17179669185,
    "name": "globalnet",
    "type": "Network"
  },
  {
    "key": 17179669186,
    "name": "internalnet",
    "type": "Network"
  },
  ...
[alice@basecm10 ~]$ curl -H "Authorization: $auth" /rest/v1/monitoring/entity?name=node001&indent=1
{
  "entities": [
    {
      "key": 38654705666,
      "name": "node001",
      "type": "PhysicalNode"
    }
  ]
}
[alice@basecm10 ~]$ curl -H "Authorization: $auth" /rest/v1/monitoring/entity?type=node&indent=1
{
  "entities": [
    {
      "key": 38654705665,
      "name": "basecm10",
      "type": "HeadNode"
    },
    {
      "key": 38654705666,
      "name": "node001",
      "type": "PhysicalNode"
    },
    {
      "key": 38654705667,
      "name": "node002",
      "type": "PhysicalNode"
    }
  ]
}
```
CMDaemon REST API

[alice@basecm10 ~]$ curlauth /rest/v1/monitoring/entity?name=node001..node002&indent=1
{
  "entities": [
    {
      "key": 38654705666,
      "name": "node001",
      "type": "PhysicalNode"
    },
    {
      "key": 38654705667,
      "name": "node002",
      "type": "PhysicalNode"
    }
  ]
}

A regex matcher can be used to find entities based on a name match:

Example

[alice@basecm10 ~]$ curlauth /rest/v1/monitoring/entity?like=lobal&indent=1
{
  "entities": [
    {
      "key": 17179869185,
      "name": "globalnet",
      "type": "Network"
    }
  ]
}

[alice@basecm10 ~]$ curlauth /rest/v1/monitoring/entity?like=nod.0*1&indent=1
{
  "entities": [
    {
      "key": 38654705666,
      "name": "node001",
      "type": "PhysicalNode"
    }
  ]
}

Measurables Via /v1/monitoring/measurable

This entry returns information about the defined measurables.

Example

[alice@basecm10 ~]$ curlauth /rest/v1/monitoring/measurable?indent=1
{
  "measurables": [
    {
      "key": 261993005057,
      "name": "IpForwDatagrams",
      "type": "metric"
    },
    {
      "key": 261993005058,
Data Usage Via /v1/monitoring/usage

The usage resource is intended to show which (entity, measurable) pairs have data. For example, nodes with only 1 disk do not have data, if their associated measurables have the string `sdb` in their name.

To get the complete usage:

Example

```
[alice@basecm10 ~]$ curlauth /rest/v1/monitoring/usage?indent=1
{
    "data": [
        {
            "entity": "default",
            "measurable": "CoresTotal"
        },
    ]
}
```
It is also possible to get all the measurables for which a specific entity, such as node001, has data.

Example

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/usage?entity=node001&indent=1
{
  "data": [ 
    { 
      "entity": "node001",
      "measurable": "IpForwDatagrams"
    },
    { 
      "entity": "node001",
      "measurable": "IpFragCreates"
    },
    { 
      "entity": "node001",
      "measurable": "IpFragFails"
    }
  ]
}
```

Or all entities which have data for a specific measurable such as loadone:

Example

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/usage?measurable=loadone&indent=1
{
  "data": [ 
    { 
      "entity": "basecm10",
      "measurable": "LoadOne"
    },
    { 
      "entity": "node001",
      "measurable": "LoadOne"
    }
  ]
}
```

The Latest Monitoring Data Via /v1/monitoring/latest

The latest resource can be used to retrieve the last known sampled data points.

It is possible to get the latest monitoring data for all (entity, measurable) pairs.

This may result in a lot of information: about 125 bytes per (entity, measurable) pair.

Example

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/latest?indent=1
{
  "data": [ 
  
```
4.2 Browsing The API

The latest data can be requested for a selection of entities and measurables.

Example

```
$ <curlauth>/rest/v1/monitoring/latest?entity=node001&indent=1
```

...typically thousands more lines...

```
"data": [
  {
    "age": 138.625,
    "entity": "node001",
    "measurable": "IpForwDatagrams",
    "raw": 0.0,
    "time": 1540476100389,
    "value": "0/s"
  },
  {
    "age": 138.625,
    "entity": "node001",
    "measurable": "IpFragCreates",
    "raw": 0.0,
    "time": 1540476100389,
    "value": "0/s"
  }
]```
...typically hundreds more lines...

[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/latest?entity=node001..node004&indent=1
...as for previous output but for the range of node001..node004...

[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/latest?measurable=LoadOne&indent=1
{
  "data": [
    {
      "age": 138.625,
      "entity": "node001",
      "measurable": "IpFragFails",
      "raw": 0.0,
      "time": 1540476100389,
      "value": "0/s"
    },
    {
      "age": 114.099,
      "entity": "basecm10",
      "measurable": "LoadOne",
      "raw": 0.03,
      "time": 1540476351361,
      "value": "0.03"
    },
    {
      "age": 155.07,
      "entity": "node001",
      "measurable": "LoadOne",
      "raw": 0.0,
      "time": 1540476310390,
      "value": "0"
    }
  ]
}

[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/dump?<options>

The dump resource has several options:

Historic Data Dump Via /v1/monitoring/dump
Dumping historic data can be done using the entry point:

Example

[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/dump?<options>"

The dump resource has several options:
4.2 Browsing The API

- **entity**: name or range of entities
- **measurable**: name of the measurable
- **start**: time to be plotted (default: -1h)
- **end**: end to be plotted (default: now)
- **intervals**: number of interpolation intervals (default: 0, raw data)
- **epoch**: display timestamps as unix epoch (default: 0)

The time specification format is the same one used for the `dumpmonitoringdata` command (section 12.6.4 of the *Administrator Manual*).

To prevent gigabytes of data being retrieved when no options are specified, *entity* and *measurable* must be specified.

If there is a need to dump all the monitoring data, then it can be done by specifying empty strings for both entity and measurable. For example, the following command dumps all raw data for the default last hour:

**Example**

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/monitoring/dump?entity=&measurable=?indent=1"
{
  "data": [
    {
      "entity": "default",
      "measurable": "CoresTotal",
      "raw": 1.0,
      "time": "2018/10/25 13:15:28",
      "value": "1"
    },
    {
      "entity": "default",
      "measurable": "CoresTotal",
      "raw": 1.0,
      "time": "2018/10/25 16:35:28",
      "value": "1"
    },
    {
      "entity": "default",
      "measurable": "CoresUp",
      "raw": 1.0,
      "value": "1"
    },
   ...typically thousands more lines...
```

### 4.2.3 Session Using /v1/session

The response to the `sessions` method is similar to the output from listing in `session` mode of `cmsh` (`cmsh -c "session list"`)

The method lists the sessions that the cluster manager is involved with.

**Example**

```
[alice@basecm10 ~]$ <curlauth>/rest/v1/session?indent=1"
[    
```
{  "address": "127.0.0.1",  "group": "admin",  "node": "basecm10",  "type": "node",  "username": ""}
{
  "address": "10.141.255.254",  "group": "admin",  "type": "node",  "username": ""
}
{
  "address": "10.141.0.1",  "group": "node",  "node": "node001",  "type": "node",  "username": ""
}
{
  "address": "10.141.0.2",  "group": "node",  "node": "node002",  "type": "node",  "username": ""
}

4.2.4 Version Using /v1/version
The version method returns version parameters.

```
{
  "build_hash": "daf30669f1",
  "build_index": 152175,
  "cm_version": "9.2",
  "cmd_version": "2.2",
  "database_version": 36280
}
```

4.2.5 License Using /v1/license
The license method returns license parameters.

Example

```
{
  "acceleratorNodeCount": 0,
  "accountingAndReporting": true,
  "baseType": "LicenseInfo",
  "burstNodeCount": 0,
  "childType": "",
  "edgeSites": true,
  "edition": "Advanced",
  "endTime": 2177449140,
  "licenseType": "Commercial",
```
"licensedAcceleratorNodes": 80,
"licensedBurstNodes": 1000,
"licensedNodes": 100,
"licensee": "/C=US/ST=None/L=None/O=None/OU=None/CN=basecm10",
"macAddress": "FA:16:3E:3B:94:98",
"message": "",
"modified": false,
"nodeCount": 3,
"oldLocalUniqueKey": 0,
"refPartitionUniqueKey": 21474836481,
"revision": "",
"serial": 1017214,
"startTime": 1508108400,
"toBeRemoved": false,
"uniqueKey": 281474976710653,
"version": "7.0 and above"
}

4.2.6 Sysinfo Using /v1/sysinfo

The sysinfo method is similar to the sysinfo command in the device mode of cmsh. It returns information about some basic system hardware parameters.

Example

```
[alice@basecm10 ~]$ curl -H "Authorization: Basic [basic auth]
/v1/sysinfo?indent=1"

{
  "node001": {
    "baseType": "SysInfoCollector",
    "biosDate": "04/01/2014",
    "biosVendor": "SeaBIOS",
    "biosVersion": "1.13.0-1ubuntu1.1",
    "bootIf": "ens3",
    "childType": "",
    "clusterRandomNumber": 6332472641088672013,
    "diskCount": 2,
    "diskTotalSpace": 10745806848,
    "disks": [
      {
        "baseType": "DiskInfo",
        "childType": "",
        "ioScheduler": "[mq-deadline] kyber bfq none",
        "model": "virtio",
        "modified": false,
        "name": "vda",
        "oldLocalUniqueKey": 0,
        "rev": "",
        "revision": "",
        "size": 8388608,
        "toBeRemoved": false,
        "uniqueKey": 281474976710948,
        "vendor": ""
      },
      {
        "baseType": "DiskInfo",
        "childType": "",
        "ioScheduler": "[mq-deadline] kyber bfq none",
```
"model": "virtio",
"modified": false,
"name": "vdb",
"oldLocalUniqueKey": 0,
"rev": "",
"revision": "",
"size": 10737418240,

4.2 Browsing The API

4.2.7 Device Information Using /v1/device

Example

```bash
$ curl -X GET http://<hostname>:<port>/rest/v1/device?indent=1
```

```json
[
  {
    "cluster": "basecm10",
    "hostname": "basecm10",
    "ip": "10.141.255.254",
    "mac": "FA:16:3E:EF:71:05",
    "network": "internalnet",
    "roles": [
      "backup",
      "storage"
    ]
  },
  {
    "cluster": "basecm10",
    "hostname": "basecm10",
    "ip": "10.141.255.254",
    "mac": "FA:16:3E:EF:71:05",
    "network": "internalnet",
    "roles": [
      "backup",
      "storage"
    ]
  }
]
```
4.2.8 WLM Information Using /v1/workload

Currently the workload path takes the jobs resource.

Example

```
[alice@basecm10 ~]$ curl -X GET /rest/v1/workload/jobs?indent=1

```
4.2 Browsing The API

```
"node001"
]
"queue": "defq",
"run_time": "3m 34s",
"start_time": "2023/06/08 14:25:58",
"state": "RUNNING",
"submit_time": "2023/06/08 14:25:57",
"user": "charlie"
},
{
"account": "projecty",
"group": "alice",
"job_id": "2307",
"job_name": "iozone",
...
```
This chapter gives an alphabetical list of the JSON API services and entities available for NVIDIA Base Command Manager. The API reference documentation for all available services and entities is available on the head node at:

/cm/local/apps/cmd/etc/htdocs/userportal/download/json/index.html.

It can also be accessed via the user portal of the cluster by clicking on the JSON API documentation link in the documentation section of the home page (Section 12.8.4 of the Administrator Manual).

Some examples of JSON usage are given in section 5.3

5.1 Services

5.1.1 auth
5.1.2 beegfs
5.1.3 ceph
5.1.4 cert
5.1.5 cloud
5.1.6 device
5.1.7 etcd
5.1.8 gui
5.1.9 job
5.1.10 keyvalue
5.1.11 kube
5.1.12 main
5.1.13 mon
5.1.14 net
5.1.15 part
5.1.16 proc
5.1.17 prov
5.1.18 serv
5.1.19 session
5.1.20 status
5.1.21 test
5.1.22 user

5.2 Entities
5.2.1 AccessSettings: Entity

parent: Entity

Parameter: username
Type: string
Description: Username for ssh and/or REST API

Parameter: password
Type: string
Description: Password for ssh and/or REST API

Parameter: rest_port
Type: unsigned integer
Description: Rest port, set to 0 to disable all REST calls

5.2.2 AMDGPUSettings: GPUSettings

parent: GPUSettings

Parameter: gpuClockLevel
Type: unsigned integer
Description: Set the GPU clock frequency level

Parameter: memoryClockLevel
Type: unsigned integer
Description: Set the GPU memory clock frequency level

Parameter: powerPlay
Type: enum
Description: Set powerplay level

Parameter: gpuOverDrive
Type: float
Description: This sets the percentage above maximum for the max performance Level

Parameter: memoryOverDrive
Type: float
Description: This sets the percentage above maximum for the max performance Level

Parameter: fanSpeed
Type: unsigned integer
Description: Fan speed value

Parameter: minimalGPUClock
Type: unsigned integer
Description: Minimum GPU clock speed

Parameter: minimalMemoryClock
Type: unsigned integer
5.2 Entities

Description: Minimum GPU Memory clock speed

Parameter: activityThreshold
Type: float
Description: Workload required before clock levels change

Parameter: hysteresisUp
Type: float
Description: Delay before clock level is increased

Parameter: hysteresisDown
Type: float
Description: Delay before clock level is decreased

5.2.3 ANFVolume: Entity
parent: Entity

Parameter: id
Type: string
Description: Unique identifier

Parameter: name
Type: string
Description: Name of the ANF volume.

Parameter: owner
Type: string
Description: Owner of the Azure NetApp pool and volume

Parameter: resourceGroup
Type: string
Description: The resource group where the volume was created

Parameter: netAppAccount
Type: string
Description: The NetApp account name where the volume was created

Parameter: location
Type: string
Description: The Azure location where the volume was created

Parameter: size
Type: unsigned integer
Description: Volume size. Should be at least 4 TiB.

Parameter: status
Type: string
Description: Status of the volume

Parameter: `mountPath`
Type: string
Description: String containing IP and mount path of the volume

Parameter: `management`
Type: enum
Description: Volume management type

Parameter: `creationTime`
Type: string
Description: Creation time

Parameter: `sharedWith`
Type: list of strings
Description: Other cmjob users that can use this volume for jobs.

5.2.4 ArchOS: ArchOSInfo
parent: ArchOSInfo

Parameter: `primaryImage`
Type: reference to SoftwareImage or None
Description: Image used to boot new nodes and keep /cm/shared up to date, empty if head node is to be used

Parameter: `shared`
Type: reference to FSPart or None
Description: Shared directory

Parameter: `installer`
Type: reference to FSPart or None
Description: Node installer

Parameter: `priority`
Type: unsigned integer
Description: Priority

5.2.5 ArchOSInfo: Entity
parent: Entity

Parameter: `arch`
Type: enum
Description: Architecture

Parameter: `os`
Type: enum
5.2 Entities

Description: Operating system

5.2.6 AWSIntermediateStorage: CMJobIntermediateStorage
parent: CMJobIntermediateStorage

Parameter: bucket
Type: string
Description: S3 Bucket name

Parameter: folder
Type: string
Description: Folder name to place data into

Parameter: region
Type: string
Description: Region for S3 bucket

Parameter: maxFSxInstanceCapacity
Type: unsigned integer
Description: Maximum FSx instance size that user can request.

Parameter: maxFSxInstanceCountPerUser
Type: unsigned integer
Description: Maximum amount of FSx instances that a user can have simultaneously.

Parameter: defaultFSxInstanceCapacity
Type: unsigned integer
Description: Default capacity of an FSx instance, used if not specified during creation.

Parameter: securityGroupFSx
Type: string
Description: Security group ID of the FSx instances

5.2.7 AzureDataDisk: AzureDisk
parent: AzureDisk

Parameter: lun
Type: unsigned integer
Description: Logical unit number of a block device to be attached

Parameter: removeOnTermination
Type: boolean
Description: If true, the drive will be removed when the instance it is attached to gets terminated

5.2.8 AzureDisk: Entity
parent: Entity

Parameter: name
Type: string
Description: Name of the data disk

Parameter: size
Type: unsigned integer
Description: Size of the drive

Parameter: image
Type: string
Description: URL to a source image for the disk

Parameter: storageAccountName
Type: string
Description: Name of a storage account to hold the disk

Parameter: imageContainerName
Type: string
Description: If the disk has the image url set, the image will be copied to a container with this name

Parameter: containerName
Type: string
Description: Name of a container in storage account to hold the disk

Parameter: managedDiskParameters
Type: AzureManagedDiskParameters
Description: Azure Managed Disk parameters

5.2.9 AzureExtension: Entity

parent: Entity

Parameter: name
Type: string
Description: User-defined name of the private cloud

Parameter: location
Type: reference to AzureLocation
Description: Region of the cluster extension

Parameter: resourceGroup
Type: string
Description: Azure resource group name for all resources in the extension

Parameter: network
Type: reference to Network
Description: Network associated with the extension

Parameter: extraField
Type: list of strings
5.2 Entities

Description:  Reserved

5.2.10 AzureIntermediateStorage: CMJobIntermediateStorage

parent: CMJobIntermediateStorage

Parameter: storageAccountId
Type: string
Description: Azure storage account ID

Parameter: accessKey
Type: string
Description: Azure storage account access key

Parameter: container
Type: string
Description: Container name to place data into

Parameter: netAppSubnetId
Type: string
Description: Azure ID for the delegated subnet where ANF volumes will be created

Parameter: netAppResourceGroupName
Type: string
Description: Resource group where the NetApp account is located

Parameter: netAppAccountName
Type: string
Description: Name of the NetApp account to create ANF volumes

Parameter: netAppServiceLevel
Type: string
Description: Service Level for newly created ANF volumes

Parameter: maxANFVolumeCapacity
Type: unsigned integer
Description: Maximum ANF volume size that user can request.

Parameter: maxANFVolumeCountPerUser
Type: unsigned integer
Description: Maximum amount of ANF volumes that a user can have simultaneously.

Parameter: defaultANFVolumeCapacity
Type: unsigned integer
Description: Default capacity of an ANF volume, used if not specified during creation.
5.2.11 AzureLocation: CloudRegion
parent: CloudRegion

5.2.12 AzureManagedDiskParameters: Entity
parent: Entity

Parameter: id
Type: string
Description: Managed disks resource ID

Parameter: storageAccountType
Type: string
Description: Storage account type for managed disks

5.2.13 AzureOSDisk: AzureDisk
parent: AzureDisk

Parameter: cachingType
Type: enum
Description: Disk caching type

5.2.14 AzureProvider: CloudProvider
parent: CloudProvider

Parameter: subscriptionId
Type: string
Description: Azure Subscription ID.

Parameter: clientId
Type: string
Description: Azure Client ID.

Parameter: clientSecret
Type: string
Description: Azure Client Secret.

Parameter: tenantId
Type: string
Description: Tenant ID.

Parameter: cloudName
Type: string
Description: Azure Cloud Name. Used to access non-public regions.

Parameter: defaultLocation
Type: reference to AzureLocation or None
Description: Default location to start virtual machine in.

Parameter: defaultVMSize
5.2 Entities

Type: reference to AzureVMSize or None
Description: Default cloud node VM size.

Parameter: defaultDirectorVMSize
Type: reference to AzureVMSize or None
Description: Default cloud director VM size.

Parameter: defaultHyperVGeneration
Type: enum
Description: Hyper-V generation to use by default (V1 or V2), see https://docs.microsoft.com/en-us/azure/virtual-machines/generation-2

Parameter: extensions
Type: list of AzureExtension
Description: List of extensions

Parameter: regions
Type: list of references to AzureLocation
Description: none

Parameter: defaultNodeInstallerImage
Type: string
Description: Default node-installer image, can be overridden in the OS disk.

Parameter: marketplaceUsePolicy
Type: enum
Description: Preference towards using marketplace images

Parameter: freeImageType
Type: enum
Description: What kind of image to use for cloud nodes within the license

5.2.15 AzureSettings::CloudSettings

Parameter: instanceId
Type: string
Description: Instance-ID provided by Azure

Parameter: availabilitySetName
Type: string
Description: Availability set name

Parameter: nicId
Type: string
Description: Network interface identifier

Parameter: externalIP
Type: IP
Description: The external IP address as set by the cloud provider

Parameter: useKernelAndInitrdFromTheSoftwareImage
Type: boolean
Description: Make the cloud node’s node-installer download the kernel and the initrd from the software image configured for this cloud node and then reboot the cloud node to use those, instead of using the kernel and initrd already present on the node-installer’s cloud image.

Parameter: location
Type: reference to AzureLocation or None
Description: Virtual Machine location

Parameter: resourceGroupName
Type: string
Description: Azure Resource Group Name

Parameter: storageAccountName
Type: string
Description: Name of a storage account where boot diagnostics will be stored for this instance

Parameter: deploymentName
Type: string
Description: Name of the Azure deployment associated with this node

Parameter: publicIpName
Type: string
Description: Name of a public ip object to be assigned to the node

Parameter: VMSize
Type: reference to AzureVMSize or None
Description: Virtual Machine size

Parameter: hyperVGeneration
Type: enum
Description: Hyper-V generation to use (V1 or V2), see https://docs.microsoft.com/en-us/azure/virtual-machines/generation-2

Parameter: disks
Type: list of AzureDisk
Description: Storage disks.

Parameter: availabilityZone
Type: string
Description: Azure Availability zone where all the resources related to this VM will be allocated

Parameter: freeImageType
5.2 Entities

Type: enum
Description: What kind of image to use for cloud nodes within the license

5.2.16 AzureVMSize: CloudType
parent: CloudType

Parameter: hyperVGenerations
Type: list of strings
Description: Supported Hyper-V generations.

5.2.17 BackupInfo: Entity
parent: Entity

Parameter: ref_source_node_uuid
Type: UUID
Description: Node

Parameter: ref_backup_node_uuid
Type: UUID
Description: Node

Parameter: ref_fspart_uuid
Type: UUID
Description: FSPart

Parameter: timestamp
Type: unsigned integer
Description: Timestamp of the completion of the backup

Parameter: index
Type: unsigned integer
Description: Index of the backup

5.2.18 BackupRole: Role
parent: Role

Parameter: directory
Type: string
Description: Directory where backups for other nodes are saved

Parameter: disabled
Type: boolean
Description: Disabled nodes will no longer be used

Parameter: backupRing
Type: unsigned integer
Description: Only backup to nodes within the same ring

Parameter: maximumNumberOfBackups
Type: unsigned integer
Description: Maximum number of backups this node should be used for, set 0 for unlimited

5.2.19 BadEntityManagers: Entity
parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: added
Type: list of strings
Description: Added

Parameter: removed
Type: list of strings
Description: Removed

Parameter: changed
Type: list of strings
Description: Changed

Parameter: error
Type: string
Description: Error

5.2.20 BaseNginxRole: Role
parent: Role

Parameter: workerConnections
Type: unsigned integer
Description: Number of worker connections

Parameter: sendFile
Type: boolean
Description: Allow files to be sent

Parameter: tcpNoPush
Type: boolean
Description: none

Parameter: tcpNoDelay
Type: boolean
Description: TCP no delay

Parameter: keepAliveTimeout
Type: unsigned integer
5.2 Entities

**Description:** Keep alive timeout

**Parameter:** typesHashMaxSize

**Type:** unsigned integer

**Description:** Types hash max size

5.2.21 BasicResource: Entity

**parent:** Entity

**Parameter:** name

**Type:** string

**Description:** Name

**Parameter:** dependency

**Type:** UUID

**Description:** Dependency on another resource, run this resource on the same node as the dependency

**Parameter:** exclude

**Type:** list of unsigned numbers

**Description:** Do not run this resource on any node running one of the excluded resources

**Parameter:** disabled

**Type:** boolean

**Description:** Disable the resource from being given to any node

**Parameter:** stopOnRemove

**Type:** boolean

**Description:** Automatically stop resource when removed

5.2.22 BeeGFSClientConfig: Entity

**parent:** Entity

**Parameter:** ref_beeegfs_cluster_uuid

**Type:** UUID

**Description:** BeeGFS cluster

**Parameter:** enableQuota

**Type:** boolean

**Description:** Enable quota

**Parameter:** createHardlinksAsSymlinks

**Type:** boolean

**Description:** Create a symlink when an application tries to create a hardlink

**Parameter:** mountSanityCheck

**Type:** float

**Description:** Time in ms server has to respond after mount sanity check
Parameter: sessionCheckOnClose
Type: boolean
Description: Check for valid sessions on storage server when a file is closed

Parameter: syncOnClose
Type: boolean
Description: Sync file content on close

Parameter: targetOfflineTimeout
Type: unsigned integer
Description: Timeout until all storage targets are considered offline when no target state updates can be fetched from management server

Parameter: updateTargetStatesTime
Type: float
Description: Interval for storage targets states check

Parameter: enableXAttrs
Type: boolean
Description: Enable xattrs

Parameter: enableACLs
Type: boolean
Description: Enable ACLs

Parameter: fileCacheType
Type: string
Description: File read/write cache type

Parameter: preferredMetaFile
Type: string
Description: Path to a file with preferred metadata servers

Parameter: preferredStorageFile
Type: string
Description: Path to a file with preferred storage targets

Parameter: preferredMetadataServers
Type: list of strings
Description: Preferred metadata server IDs

Parameter: preferredStorageServers
Type: list of strings
Description: Preferred metadata server IDs

Parameter: remoteFSync
Type: boolean
5.2 Entities

Description: Should fsync be executed on server to flush cached file

Parameter: useGlobalAppendLocks
Type: boolean
Description: Should files, opened in append mode, be protected by locks on local machine (YES) or on servers (NO)

Parameter: useGlobalFileLocks
Type: boolean
Description: Should advisory locks be checked on local machine (YES) or on servers (NO)

Parameter: connectionSettings
Type: BeeGFSClientConnectionSettings
Description: Submode containing BeeGFS client connection settings

Parameter: logType
Type: enum
Description: Send log messages to the helper daemon or syslog to send them to the system logger

Parameter: level
Type: unsigned integer
Description: Log level

Parameter: addClientId
Type: boolean
Description: Defines whether the ClientID should appear in each log line

Parameter: helperIp
Type: IP
Description: Defines the IP address of the node on which the beegfs-helperd runs for remote logging

5.2.23 BeeGFSClientConnectionSettings: Entity

Parameter: portUDP
Type: unsigned integer
Description: UDP port for the client daemon

Parameter: maxInternodeNumber
Type: unsigned integer
Description: Max number of simultaneous connections to the same node

Parameter: communicationRetry
Type: unsigned integer
Description: Time for retries in case of a network failure

Parameter: fallbackExpiration
Type: unsigned integer
**Description:** Time after which a connection to a fallback interface expires

**Parameter:** interfacesFile  
**Type:** string  
**Description:** Path to the file with a list of interfaces for communication

**Parameter:** interfacesList  
**Type:** list of strings  
**Description:** List of interfaces for communication

**Parameter:** maxConcurrentAttempts  
**Type:** unsigned integer  
**Description:** This may help in case establishing new connections keeps failing and produces fallbacks

**Parameter:** netFilterFile  
**Type:** string  
**Description:** Path to a file with a list of allowed IP subnets

**Parameter:** tcpOnlyFilterFile  
**Type:** string  
**Description:** Path to a file with a list of no-RDMA IP ranges

**Parameter:** useRDMA  
**Type:** boolean  
**Description:** Use RDMA

**Parameter:** rdmaBuffersNumber  
**Type:** unsigned integer  
**Description:** Number of RDMA buffers

**Parameter:** rdmaBufferSize  
**Type:** unsigned integer  
**Description:** Maximum size of a buffer that will be sent over the network

**Parameter:** rdmaTypeOfService  
**Type:** unsigned integer  
**Description:** RDMA type of service

**Parameter:** unmountRetries  
**Type:** boolean  
**Description:** If communication error occurs during unmount, the unsuccessful communications will be retried normally.

***5.2.24 BeeGFSClientRole: Role***

**parent:** Role

**Parameter:** configurations  
**Type:** list of BeeGFSClientConfig
5.2 Entities

Description: List of BeeGFS client configurations

5.2.25 BeeGFSCluster: Entity
parent: Entity

Parameter: name
Type: string
Description: Name of the BeeGFS cluster

Parameter: multiMode
Type: boolean
Description: BeeGFS multi mode enabled

Parameter: mountpoint
Type: string
Description: Path to a beegfs filesystem mountpoint

Parameter: authFile
Type: string
Description: Path to the shared secret authentication file

5.2.26 BeeGFSHelperConfig: Entity
parent: Entity

Parameter: ref_beegfs_cluster_uuid
Type: UUID
Description: BeeGFS cluster

Parameter: runDaemonized
Type: boolean
Description: Run the helper as a daemon

Parameter: workersNumber
Type: unsigned integer
Description: Number of worker threads for helper service

Parameter: connectionSettings
Type: BeeGFSHelperConnectionSettings
Description: Submode containing BeeGFS helper connection settings

Parameter: logSettings
Type: BeeGFSLogSettings
Description: Submode containing BeeGFS logging settings

5.2.27 BeeGFSHelperConnectionSettings: Entity
parent: Entity

Parameter: portTCP
Type: unsigned integer
Description: TCP port for the service

5.2.28 BeeGFSHelperRole: Role
parent: Role

Parameter: configurations
Type: list of BeeGFSHelperConfig
Description: List of BeeGFS helper configurations

5.2.29 BeeGFSLogSettings: Entity
parent: Entity

Parameter: logType
Type: enum
Description: Defines the logger type. This can either be ‘syslog’ to send log messages to the general system logger or ‘logfile’

Parameter: level
Type: unsigned integer
Description: Log level

Parameter: noDate
Type: boolean
Description: Do not show date along with time in log

Parameter: numberOfLines
Type: unsigned integer
Description: Number of lines in log file, after which it will be rotated

Parameter: numberOfRotatedFiles
Type: unsigned integer
Description: Number of old log files to keep

Parameter: file
Type: string
Description: Path to the log file, empty means logs go to the journal

5.2.30 BeeGFSManagementConfig: Entity
parent: Entity

Parameter: ref_beegef_cluster_uuid
Type: UUID
Description: BeeGFS cluster

Parameter: dataDir
Type: string
Description: Path to the data directory

Parameter: allowNewServers
Type: boolean
Description: Allow new servers registration

Parameter: allowNewTargets
Type: boolean
Description: Allow new storage targets registration

Parameter: targetOfflineTimeout
Type: unsigned integer
Description: Timeout until targets on a storage server are considered offline when no target status is received

Parameter: clientAutoRemove
Type: unsigned integer
Description: Time after which an unreachable node is considered dead

Parameter: numberOfWorkers
Type: unsigned integer
Description: Number of worker threads

Parameter: metaDynamicPools
Type: boolean
Description: Raise lower limits if difference in capacity becomes too large between targets

Parameter: metaInodesLowLimit
Type: string
Description: Metadata inode free space pool threshold

Parameter: metaInodesEmergencyLimit
Type: string
Description: Metadata inode free space pool threshold

Parameter: metaSpaceLowLimit
Type: unsigned integer
Description: Meta space low limit

Parameter: metaSpaceEmergencyLimit
Type: unsigned integer
Description: Meta space emergency limit

Parameter: storageDynamicPools
Type: boolean
Description: Raise lower limits if difference in capacity becomes too large between targets

Parameter: storageInodesLowLimit
Type: unsigned integer
**Description:** Storage inode free space pool threshold

**Parameter:** storageInodesEmergencyLimit
**Type:** unsigned integer
**Description:** Storage inode free space pool threshold

**Parameter:** storageSpaceLowLimit
**Type:** unsigned integer
**Description:** Storage space free space pool threshold

**Parameter:** storageSpaceEmergencyLimit
**Type:** unsigned integer
**Description:** Storage space free space pool threshold

**Parameter:** enableQuota
**Type:** boolean
**Description:** Enable quota

**Parameter:** quotaQueryGIDFile
**Type:** string
**Description:** Path to a file with GIDs to be checked by quota

**Parameter:** quotaGIDs
**Type:** list of strings
**Description:** GIDs to be checked by quota

**Parameter:** quotaQueryGIDRange
**Type:** string
**Description:** GID range to be checked by quota

**Parameter:** quotaQueryUIDFile
**Type:** string
**Description:** Path to a file with UIDs to be checked by quota

**Parameter:** quotaUIDs
**Type:** list of strings
**Description:** UIDs to be checked by quota

**Parameter:** quotaQueryUIDRange
**Type:** string
**Description:** UID range to be checked by quota

**Parameter:** quotaQueryType
**Type:** string
**Description:** Query type for quota

**Parameter:** quotaQueryWithSystemUsersGroups
5.2 Entities

**Parameter:** quotaUpdateInterval
**Type:** unsigned integer
**Description:** Quota update interval

**Parameter:** connectionSettings
**Type:** BeeGFSManagementConnectionSettings
**Description:** Submode containing BeeGFS management connection settings

**Parameter:** logSettings
**Type:** BeeGFSLogSettings
**Description:** Submode containing BeeGFS logging settings

### 5.2.31 BeeGFSManagementConnectionSettings: Entity

**Parameter:** portTCP
**Type:** unsigned integer
**Description:** TCP port for the service

**Parameter:** portUDP
**Type:** unsigned integer
**Description:** UDP port for the service

**Parameter:** backlogTCP
**Type:** unsigned integer
**Description:** TCP listen backlog

**Parameter:** interfacesFile
**Type:** string
**Description:** Path to the file with a list of interfaces for communication

**Parameter:** interfacesList
**Type:** list of strings
**Description:** List of interfaces for communication

**Parameter:** netFilterFile
**Type:** string
**Description:** Path to a file with a list of allowed IP subnets

**Parameter:** useRDMA
**Type:** boolean
**Description:** Use RDMA
5.2.32 BeeGFSManagementRole: Role
parent: Role

Parameter: configurations
Type: list of BeeGFSManagementConfig
Description: List of BeeGFS management configurations

5.2.33 BeeGFSMetadataConfig: Entity
parent: Entity

Parameter: ref_beegfs_cluster_uuid
Type: UUID
Description: BeeGFS cluster

Parameter: dataDir
Type: string
Description: Path to the data directory

Parameter: bindToNumaZone
Type: string
Description: Zero-based NUMA zone number to which all threads of metadata process should be bound

Parameter: runDaemonized
Type: boolean
Description: Run the storage service as a daemon

Parameter: clientXAttrs
Type: boolean
Description: Enable client-side extended attributes

Parameter: clientACLs
Type: boolean
Description: Enable handling and storage of client-side ACLs

Parameter: useExtendedAttributes
Type: boolean
Description: Store metadata as extended attributes or not

Parameter: allowUserSetPattern
Type: boolean
Description: Allow non-privileged users to modify stripe pattern settings for directories they own

Parameter: useAggressiveStreamPoll
Type: boolean
Description: Actively poll for events instead of sleeping until an event occur

Parameter: usePerUserMsgQueues
5.2 Entities

Type: boolean
Description: Use per-user queues for pending requests

Parameter: targetChooser
Type: enum
Description: The algorithm to choose storage targets for file creation

Parameter: targetOfflineTimeout
Type: unsigned integer
Description: Timeout until targets on a storage server are considered offline when no target status is received

Parameter: targetAttachmentFile
Type: string
Description: File with a list of targets to be grouped within the same domain for randominternode

Parameter: numberOfStreamListeners
Type: unsigned integer
Description: The number of threads waiting for incoming data events

Parameter: numberOfWorkers
Type: unsigned integer
Description: Number of worker threads

Parameter: startByCMDaemon
Type: boolean
Description: Start service by CMDaemon or manually

Parameter: connectionSettings
Type: BeeGFSMetadataConnectionSettings
Description: Submode containing BeeGFS metadata connection settings

Parameter: logSettings
Type: BeeGFSLogSettings
Description: Submode containing BeeGFS logging settings

5.2.34 BeeGFSMetadataConnectionSettings: Entity

Parameter: portTCP
Type: unsigned integer
Description: TCP port for the service

Parameter: portUDP
Type: unsigned integer
Description: UDP port for the service

Parameter: backlogTCP
Type: unsigned integer
Description: TCP listen backlog

Parameter: maxInternodeNumber
Type: unsigned integer
Description: Max number of simultaneous connections to the same node

Parameter: fallbackExpiration
Type: unsigned integer
Description: Time after which a connection to a fallback interface expires

Parameter: interfacesFile
Type: string
Description: Path to the file with a list of interfaces for communication

Parameter: interfacesList
Type: list of strings
Description: List of interfaces for communication

Parameter: netFilterFile
Type: string
Description: Path to a file with a list of allowed IP subnets

Parameter: tcpOnlyFilterFile
Type: string
Description: Path to a file with a list of no-RDMA IP ranges

Parameter: useRDMA
Type: boolean
Description: Use RDMA

Parameter: rdmaTypeOfService
Type: unsigned integer
Description: RDMA type of service

5.2.35 BeeGFSMetadataRole: Role
parent: Role
Parameter: configurations
Type: list of BeeGFSMetadataConfig
Description: List of BeeGFS metadata configurations

5.2.36 BeeGFSStorageConfig: Entity
parent: Entity
Parameter: ref_beegfs_cluster_uuid
Type: UUID
### 5.2 Entities

**Description:** BeeGFS cluster

**Parameter:** `dataDirs`
*Type:* list of strings
*Description:* Path to the data directories

**Parameter:** `targetOfflineTimeout`
*Type:* unsigned integer
*Description:* Timeout until targets on a storage server are considered offline when no target status is received

**Parameter:** `useAggressiveStreamPoll`
*Type:* boolean
*Description:* Actively poll for events instead of sleeping until an event occurs

**Parameter:** `usePerTargetWorkers`
*Type:* boolean
*Description:* Create a separate set of workers and attach it for each storage target

**Parameter:** `usePerUserMsgQueues`
*Type:* boolean
*Description:* Use per-user queues for pending requests

**Parameter:** `runDaemonized`
*Type:* boolean
*Description:* Run the storage service as a daemon

**Parameter:** `bindToNumaZone`
*Type:* string
*Description:* Zero-based NUMA zone number to which all threads of metadata process should be bound

**Parameter:** `resyncSafetyThreshold`
*Type:* unsigned integer
*Description:* Add an extra amount of time to the last successful communication timestamp, in case of a potential cache loss

**Parameter:** `fileReadAheadSize`
*Type:* unsigned integer
*Description:* Byte range submitted to the kernel for read-ahead after number of bytes was already read from target

**Parameter:** `fileReadAheadTriggerSize`
*Type:* unsigned integer
*Description:* Number of bytes after reading which the read-ahead is triggered

**Parameter:** `fileReadSize`
Type: unsigned integer
Description: Maximum amount of data server should read in a single operation

Parameter: `fileWriteSize`
Type: unsigned integer
Description: Maximum amount of data server should write in a single operation

Parameter: `fileWriteSyncSize`
Type: unsigned integer
Description: Number of bytes after which kernel will be advised to commit data

Parameter: `workerBufferSize`
Type: unsigned integer
Description: Size of network and io buffers, allocated for each worker

Parameter: `numberOfResyncGatherSlaves`
Type: unsigned integer
Description: Number of threads to gather filesystem information for a buddy mirror resync

Parameter: `numberOfResyncSlaves`
Type: unsigned integer
Description: Number of threads to sync filesystem information for a buddy mirror resync

Parameter: `numberOfStreamListeners`
Type: unsigned integer
Description: Number of threads waiting for incoming data events

Parameter: `numberOfWorkers`
Type: unsigned integer
Description: Number of worker threads

Parameter: `startByCMDaemon`
Type: boolean
Description: Start service by CMDaemon or manually

Parameter: `connectionSettings`
Type: `BeeGFSStorageConnectionSettings`
Description: Submode containing BeeGFS storage connection settings

Parameter: `logSettings`
Type: `BeeGFSLogSettings`
Description: Submode containing BeeGFS logging settings

5.2.37 `BeeGFSStorageConnectionSettings`: Entity
parent: Entity

Parameter: `portTCP`
Type: unsigned integer
Description: TCP port for the service

Parameter: portUDP
Type: unsigned integer
Description: UDP port for the service

Parameter: backlogTCP
Type: unsigned integer
Description: TCP listen backlog

Parameter: maxInternodeNumber
Type: unsigned integer
Description: Max number of simultaneous connections to the same node

Parameter: interfacesFile
Type: string
Description: Path to the file with a list of interfaces for communication

Parameter: interfacesList
Type: list of strings
Description: List of interfaces for communication

Parameter: netFilterFile
Type: string
Description: Path to a file with a list of allowed IP subnets

Parameter: tcpOnlyFilterFile
Type: string
Description: Path to a file with a list of no-RDMA IP ranges

Parameter: useRDMA
Type: boolean
Description: Use RDMA

Parameter: rdmaTypeOfService
Type: unsigned integer
Description: RDMA type of service

5.2.38 BeeGFSStorageRole: Role
parent: Role

Parameter: configurations
Type: list of BeeGFSStorageConfig
Description: List of BeeGFS storage configurations
5.2.39  BlockingOperation: Entity

**parent**: Entity

**Parameter**: ref_node_uuid
**Type**: UUID
**Description**: Node

**Parameter**: message
**Type**: string
**Description**: Message

5.2.40  BlockingProvisioningOperation: BlockingOperation

**parent**: BlockingOperation

**Parameter**: request_uuids
**Type**: list of unsigned numbers
**Description**: Request UUIDs

5.2.41  BlockingWarningOperation: BlockingOperation

**parent**: BlockingOperation

5.2.42  BMCSettings: Entity

**parent**: Entity

**Parameter**: userName
**Type**: string
**Description**: Username used to send BMC commands

**Parameter**: userID
**Type**: integer
**Description**: User ID to send BMC commands

**Parameter**: password
**Type**: string
**Description**: Password used to send BMC commands

**Parameter**: powerResetDelay
**Type**: unsigned integer
**Description**: Delay used for BMC power reset, if set to > 0 power off; sleep X; power on is used

**Parameter**: extraArguments
**Type**: string
**Description**: Extra arguments passed to BMC commands

**Parameter**: privilege
**Type**: enum
**Description**: Privilege given to the user

**Parameter**: firmwareManageMode
5.2 Entities

Type: enum
Description: Firmware manage mode

5.2.43 BootRole: Role
parent: Role

Parameter: nodegroups
Type: list of references to NodeGroup
Description: List of node groups which can boot from this node

Parameter: categories
Type: list of references to Category
Description: List of categories which can boot from this node

Parameter: racks
Type: list of references to Rack
Description: List of racks which can boot from this node

Parameter: softwareImages
Type: list of references to SoftwareImage
Description: List of software images from which can be booted, leave empty for all images

Parameter: allowRamdiskCreation
Type: boolean
Description: Allow the node to create ramdisks by itself, instead of waiting for them to be rsynced from the headnode

Parameter: disableAutomaticExports
Type: boolean
Description: Disable creation of automatic filesystem exports

Parameter: unmanagedNodes
Type: boolean
Description: Allow unmanged nodes to boot

Parameter: imagesFromProvisioningRole
Type: boolean
Description: Only allow nodes to boot from images defined in the provisioning role

Parameter: syncFSParts
Type: enum
Description: Sync FSParts mode

Parameter: fsparts
Type: list of references to FSPart
Description: FSParts
5.2.44  BurnConfig: Entity

parent: Entity

Parameter: name
Type: string
Description: A short name to identify this burn configuration.

Parameter: description
Type: string
Description: A more extensive description of this burn configuration.

Parameter: configuration
Type: string
Description: This XML data describes which burn tests should be used.

5.2.45  BurnStatus: Entity

parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: startNewBurn
Type: boolean
Description: Starting new burn on next reboot

Parameter: burning
Type: boolean
Description: Currently burning

Parameter: information
Type: string
Description: Information

Parameter: configuration
Type: string
Description: Configuration

Parameter: error
Type: string
Description: Error message.

Parameter: warnings
Type: unsigned integer
Description: Number of warnings which have occurred so far.

Parameter: phaseName
Type: string
5.2 Entities

Description: Name of the current phase.

Parameter: phaseTime
Type: string
Description: Time past since the current phase was started.

Parameter: burnComplete
Type: string
Description: Set if the burn cycle has completed.

Parameter: burnFailed
Type: boolean
Description: Set if the burn cycle has failed.

Parameter: testStatusList
Type: list of BurnTestStatus
Description: none

Parameter: tag
Type: string
Description: Hardware tag.

5.2.46 BurnTestStatus: Entity

parent: Entity

Parameter: name
Type: string
Description: Test name

Parameter: status
Type: string
Description: Test status

Parameter: started
Type: boolean
Description: Indicates if test was started

Parameter: passed
Type: boolean
Description: Indicates if test has passed

Parameter: failed
Type: boolean
Description: Indicates if test has failed

Parameter: warning
Type: boolean
Description: Indicates if test produced a warning

5.2.47 CapiRole: Role

parent: Role

Parameter: labels
Type: list of strings
Description: labels to attach to the ByoHost CR in the form labelname=labelVal for e.g. ‘–label site=apac –label cores=2’

Parameter: metricsBindAddress
Type: string
Description: metricsbindaddress is the TCP address that the controller should bind to for serving prometheus metrics. It can be set to ‘0’ to disable the metrics serving (default ‘:8888’)

Parameter: level
Type: unsigned integer
Description: Number for the log level verbosity

Parameter: options
Type: list of strings
Description: Additional parameters for byoh host agent

Parameter: kubeCluster
Type: reference to KubeCluster
Description: The Kubernetes cluster instance (pointer)

5.2.48 Category: Entity

parent: Entity

Parameter: name
Type: string
Description: Name of category

Parameter: fsmounts
Type: list of FSMount
Description: Configure the entries placed in /etc/fstab

Parameter: staticRoutes
Type: list of StaticRoute
Description: Configure static routes for the interfaces

Parameter: roles
Type: list of Role
Description: Assign the roles the node should play

Parameter: notes
Type: string
Description: Administrator notes

Parameter: gpuSettings
Type: list of GPUSettings
Description: Configure the GPUs

Parameter: softwareImageProxy
Type: SoftwareImageProxy
Description: Software image the category will use

Parameter: defaultGateway
Type: IP
Description: Default gateway for the category

Parameter: nameServers
Type: list of signed numbers
Description: List of name servers the category will use

Parameter: timeServers
Type: list of strings
Description: List of time servers the category will use

Parameter: searchDomains
Type: list of strings
Description: Search domains for the category

Parameter: disksetup
Type: string
Description: Node specific disk setup

Parameter: biosSetup
Type: free JSON object
Description: BIOS setup

Parameter: installMode
Type: string
Description: Installmode to be used by default, if none is specified in the node

Parameter: newNodeInstallMode
Type: string
Description: Installmode to be used by default, for new nodes

Parameter: excludeListFull
Type: string
Description: Exclude list for full install

Parameter: excludeListSync
Type: string
Description: Exclude list for sync install

Parameter: excludeListUpdate
Type: string
Description: Exclude list for update

Parameter: excludeListGrab
Type: string
Description: Exclude list for grabbing to an existing image

Parameter: excludeListGrabnew
Type: string
Description: Exclude list for grabbing to a new image

Parameter: initialize
Type: string
Description: Initialize script to be used for category

Parameter: finalize
Type: string
Description: Finalize script to be used for category

Parameter: raidconf
Type: string
Description: Node specific Hardware RAID configuration

Parameter: fexports
Type: list of FSExport
Description: Configure the entries placed in /etc/exports

Parameter: services
Type: list of OSServiceConfig
Description: Manage operating system services

Parameter: bmcSettings
Type: BMCSettings or None
Description: Configure the baseboard management controller settings

Parameter: selinuxSettings
Type: SELinuxSettings or None
Description: Configure the SELinux settings

Parameter: dpuSettings
Type: DPUSettings or None
Description: Configure the DPU settings
Parameter: `proxySettings`  
**Type:** `ProxySettings` or `None`  
**Description:** Configure the proxy server settings

Parameter: `nodeInstallerDisk`  
**Type:** `boolean`  
**Description:** The node has its own node installer disk

Parameter: `installBootRecord`  
**Type:** `boolean`  
**Description:** Install boot record on local disk

Parameter: `managementNetwork`  
**Type:** `reference to Network` or `None`  
**Description:** Determines what network should be used for management traffic. If not set, partition setting is used.

Parameter: `interactiveUser`  
**Type:** `enum`  
**Description:** Allow user login on node

Parameter: `dataNode`  
**Type:** `boolean`  
**Description:** If enabled the node will never do a FULL install without explicit user confirmation

Parameter: `allowNetworkingRestart`  
**Type:** `boolean`  
**Description:** Allow nodes to update ifcfg files and restart networking

Parameter: `excludeListManipulateScript`  
**Type:** `string`  
**Description:** A user defined script that can be used to do custom last minute changes to the exclude lists used by cmdaemon to rsync

Parameter: `ioScheduler`  
**Type:** `string`  
**Description:** The I/O scheduler for the disks

Parameter: `useExclusivelyFor`  
**Type:** `string`  
**Description:** Use node exclusively for desired function: stop all other services

Parameter: `kernelVersion`  
**Type:** `string`  
**Description:** Kernel version used

Parameter: `kernelParameters`
Type: string
Description: Kernel parameters passed to the kernel at boot time

Parameter: kernelOutputConsole
Type: string
Description: Kernel output console used at boot time

Parameter: modules
Type: list of KernelModule
Description: Manage kernel modules loaded in this image

Parameter: versionConfigFiles
Type: boolean
Description: Keep old versions of all config files for all nodes in this category

Parameter: bootLoader
Type: enum
Description: Boot loader

Parameter: bootLoaderProtocol
Type: enum
Description: Boot loader protocol for retrieving initrd and vmlinuz

Parameter: bootLoaderFile
Type: string
Description: Alternative boot loader file

Parameter: fips
Type: enum
Description: Federal Information Processing Standard Security Requirements

Parameter: timeZoneSettings
Type: TimeZoneSettings or None
Description: Time zone

5.2.49 Ceph: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: fsid
Type: string
Description: Ceph ID

Parameter: configFilePath
Type: string
Description: Path to the Ceph config file

Parameter: adminKeyringFilePath
Type: string
Description: Path to the Ceph admin keyring file

Parameter: monitorKeyringFilePath
Type: string
Description: Path to the Ceph monitor keyring file

Parameter: adminKey
Type: string
Description: Ceph client admin key

Parameter: monitorKey
Type: string
Description: Ceph monitor key

Parameter: publicNetworks
Type: list of references to Network
Description: Public networks

Parameter: clusterNetworks
Type: list of references to Network
Description: Cluster networks

Parameter: creationTime
Type: timestamp
Description: Date on which the Ceph was defined

Parameter: setupState
Type: enum
Description: Flag to keep track of the installation state

Parameter: version
Type: string
Description: Ceph version of the cluster

Parameter: monmap
Type: string
Description: none

Parameter: bootstrapped
Type: boolean
Description: Bootstrapped

Parameter: monitorPortV1
Type: unsigned integer
Description: Monitor daemon port

Parameter: monitorPortV2
Type: unsigned integer
Description: Monitor daemon port (msgr2)

Parameter: monAllowPoolDelete
Type: boolean
Description: mon allow pool delete

Parameter: monOsdFullRatio
Type: float
Description: mon osd full ratio

Parameter: monOsdNearfullRatio
Type: float
Description: mon osd nearfull ratio

Parameter: monMaxOsd
Type: unsigned integer
Description: mon max osd

Parameter: osdPoolDefaultSize
Type: unsigned integer
Description: osd pool default size

Parameter: osdPoolDefaultMinSize
Type: unsigned integer
Description: osd pool default min size

Parameter: autoAdjustCrushMap
Type: boolean
Description: Automatically Adjust CRUSH Map

Parameter: rbdCache
Type: boolean
Description: Enable caching for RADOS Block Device (RBD).

Parameter: rbdCacheSize
Type: unsigned integer
Description: The RBD cache size in bytes.

Parameter: rbdCacheMaxDirty
Type: unsigned integer
5.2 Entities

Description: The dirty limit in bytes at which the cache triggers write-back. If 0, uses write-through caching. Constraint: Must be less than rbd cache size.

Parameter: rbdCacheTargetDirty
Type: unsigned integer
Description: The dirty target before the cache begins writing data to the data storage. Does not block writes to the cache. Constraint: Must be less than rbd cache max dirty.

Parameter: rbdCacheMaxDirtyAge
Type: float
Description: The number of seconds dirty data is in the cache before writeback starts.

Parameter: rbdCacheWritethroughUntilFlush
Type: boolean
Description: Start out in write-through mode, and switch to write-back after the first flush request is received.

Parameter: rbdReadaheadTriggerRequests
Type: integer
Description: Number of sequential read requests necessary to trigger read-ahead.

Parameter: rbdReadaheadMaxBytes
Type: unsigned integer
Description: Maximum size of a read-ahead request. If zero, read-ahead is disabled.

Parameter: rbdReadaheadDisableAfterBytes
Type: unsigned integer
Description: After this many bytes have been read from an RBD image, read-ahead is disabled for that image until it is closed. If zero, read-ahead stays enabled.

5.2.50 CephMDSRole: Role
parent: Role

Parameter: mdsBeaconInterval
Type: float
Description: The frequency (in seconds) of beacon messages sent to the monitor.

Parameter: mdsBeaconGrace
Type: float
Description: The interval without beacons before Ceph declares an MDS laggy (and possibly replace it).

Parameter: mdsTickInterval
Type: float
Description: How frequently the MDS performs internal periodic tasks.
5.2.51 CephMGRRole: Role
parent: Role

Parameter: modulePath
Type: string
Description: Path to load modules from

Parameter: dataPath
Type: string
Description: Path to load daemon data (such as keyring)

Parameter: beaconPeriod
Type: integer
Description: How many seconds between mgr beacons to monitors

5.2.52 CephMonitorRole: Role
parent: Role

Parameter: dataPath
Type: string
Description: Path to the Monitor data

5.2.53 CephOSDBlueStoreConfig: CephOSDConfig
parent: CephOSDConfig

Parameter: osdDevice
Type: string
Description: Device to store OSD data

Parameter: osdWalDevice
Type: string
Description: Optional device to store write-ahead-log

Parameter: osdDbDevice
Type: string
Description: Optional device to store internal metadata

5.2.54 CephOSDConfig: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

5.2.55 CephOSDPool: Entity
parent: Entity

Parameter: id
Type: unsigned integer
5.2 Entities

**Description:** Id

**Parameter:** name
Type: string
Description: Name

**Parameter:** size
Type: unsigned integer
Description: Number of replicas

**Parameter:** pgp_num
Type: unsigned integer
Description: The effective number of placement groups for placement to use when calculating data placement

**Parameter:** pg_num
Type: unsigned integer
Description: The effective number of placement groups to use when calculating data placement

**Parameter:** pg_autoscale_mode
Type: enum
Description: Placement groups auto management mode

**Parameter:** crush_ruleset
Type: unsigned integer
Description: CRUSH Map Ruleset

**Parameter:** application
Type: string
Description: Associated application (typically one of rgw,rbd,cephfs)

**Parameter:** min_size
Type: unsigned integer
Description: none

5.2.56 CephOSDRole
parent: Role

**Parameter:** osdconfigs
Type: list of CephOSDConfig
Description: OSD configurations

5.2.57 CephState
parent: Entity

**Parameter:** ref_ceph_uuid
Type: UUID
Description: Ceph

Parameter: version
Type: unsigned integer
Description: none

Parameter: ref_ceph_node_uuids
Type: list of unsigned numbers
Description: none

Parameter: cephNodeValues
Type: list of signed numbers
Description: none

Parameter: OSDMapIds
Type: list of unsigned numbers
Description: none

Parameter: OSDMapNodes
Type: list of unsigned numbers
Description: none

Parameter: OSDMapConfigs
Type: list of unsigned numbers
Description: none

Parameter: OSDMapConfigNames
Type: list of strings
Description: none

Parameter: OSDMapStatuses
Type: list of unsigned numbers
Description: to mark status (e.g. NEED_DELETE) using numeric constants

Parameter: OSDMapDevices
Type: list of strings
Description: in case we need to keep track of changing device names

5.2.58 Certificate: Entity
parent: Entity

Parameter: PEM
Type: string
Description: none

Parameter: revoked
Type: boolean
5.2 Entities

Description: Certificate has been revoked and can not be used

Parameter: serialNumber
Type: integer
Description: Serial number

Parameter: remaining
Type: integer
Description: Remaining time until certificate expires

Parameter: startTime
Type: timestamp
Description: Date when certificate is valid

Parameter: expireTime
Type: timestamp
Description: Date when certificate expires

Parameter: CA
Type: boolean
Description: A CA certificate can be used sign other certificates

Parameter: hasEdgeSecret
Type: boolean
Description: Has an edge secret

Parameter: profile
Type: string
Description: Profile

Parameter: sysLogin
Type: string
Description: System log in

Parameter: component
Type: string
Description: Component

Parameter: subjectName
Type: string
Description: Subject

Parameter: issuerName
Type: string
Description: Issuer

Parameter: subjectAlternativeNames
Type: list of strings
Description: Alternative names

Parameter: country
Type: string
Description: Country

Parameter: state
Type: string
Description: State

Parameter: locality
Type: string
Description: Locality

Parameter: organization
Type: string
Description: Organization

Parameter: organizationalUnit
Type: string
Description: Organizational unit

Parameter: commonName
Type: string
Description: Name

5.2.59 CertificateInfo: Entity
parent: Entity

Parameter: certificate
Type: Certificate
Description: Certificate

Parameter: private_key
Type: string
Description: Optional private key field.

5.2.60 CertificateRequest: Entity
parent: Entity

Parameter: CSR
Type: string
Description: none

Parameter: session_uuid
Type: UUID
5.2 Entities

Description: Session

Parameter: clientType
Type: unsigned integer
Description: Client type

Parameter: country
Type: string
Description: Country

Parameter: state
Type: string
Description: State

Parameter: locality
Type: string
Description: Locality

Parameter: organization
Type: string
Description: Organization

Parameter: organizationalUnit
Type: string
Description: Organizational unit

Parameter: commonName
Type: string
Description: Common name

Parameter: subjectAlternativeNames
Type: list of strings
Description: Subject alternative names

Parameter: allowAutosign
Type: boolean
Description: Allow autosign

Parameter: hasEdgeSecret
Type: boolean
Description: Has an edge secret

5.2.61 CertificateSubjectName: Entity
parent: Entity

Parameter: country
Type: string
Description: Country

Parameter: state
Type: string
Description: State

Parameter: locality
Type: string
Description: Locality

Parameter: organization
Type: string
Description: Organization

Parameter: organizationalUnit
Type: string
Description: Organizational unit

Parameter: commonName
Type: string
Description: CommonName

Parameter: profile
Type: string
Description: Profile

Parameter: syslogin
Type: string
Description: Syslogin

Parameter: component
Type: string
Description: Component

Parameter: days
Type: integer
Description: Days

Parameter: ca
Type: boolean
Description: CA

Parameter: subjectAlternativeNames
Type: list of strings
Description: Alternative names
5.2.62 ChargeBackRequest: Entity

**parent:** Entity

- **Parameter:** `name`
  - **Type:** string
  - **Description:** Name

- **Parameter:** `groupByUser`
  - **Type:** boolean
  - **Description:** Group by user

- **Parameter:** `groupByGroup`
  - **Type:** boolean
  - **Description:** Group by group

- **Parameter:** `groupByAccount`
  - **Type:** boolean
  - **Description:** Group by account

- **Parameter:** `groupByJobName`
  - **Type:** boolean
  - **Description:** Group by job name

- **Parameter:** `groupByJobId`
  - **Type:** boolean
  - **Description:** Group by job ID

- **Parameter:** `groupByAccountingInfo`
  - **Type:** list of strings
  - **Description:** Group by accounting info

- **Parameter:** `users`
  - **Type:** list of strings
  - **Description:** Users

- **Parameter:** `groups`
  - **Type:** list of strings
  - **Description:** Users

- **Parameter:** `accounts`
  - **Type:** list of strings
  - **Description:** Accounts

- **Parameter:** `jobNames`
  - **Type:** list of strings
  - **Description:** Job names
Parameter:  jobIds
Type:  list of strings
Description:  Job IDs

Parameter:  accountingInfo
Type:  free JSON object
Description:  Accounting info

Parameter:  wlmClusters
Type:  list of references to WlmCluster
Description:  List of wlm clusters which to include, empty for all

Parameter:  pricePerCPUSecond
Type:  float
Description:  Price per CPU second

Parameter:  pricePerCPUCoreSecond
Type:  float
Description:  Price per CPU core second

Parameter:  pricePerGPUSecond
Type:  float
Description:  Price per GPU second

Parameter:  pricePerMemoryByteSecond
Type:  float
Description:  Price per memory byte-second

Parameter:  pricePerSlotSecond
Type:  float
Description:  Price per slot second

Parameter:  currency
Type:  string
Description:  Currency

Parameter:  startTime
Type:  string
Description:  Start time

Parameter:  endTime
Type:  string
Description:  End time

Parameter:  utc
Type:  boolean
5.2 Entities

**Description:** Time in UTC

**Parameter:** includeRunning  
**Type:** boolean  
**Description:** Include running

**Parameter:** calculatePrediction  
**Type:** boolean  
**Description:** Calculate prediction

**Parameter:** preference  
**Type:** unsigned integer  
**Description:** The request with the highest preference be shown by default

**Parameter:** notes  
**Type:** string  
**Description:** Administrator notes

### 5.2.63 Chassis: Device

**parent:** Device

**Parameter:** ip  
**Type:** IP  
**Description:** Ip address

**Parameter:** network  
**Type:** reference to Network or None  
**Description:** Network to which this switch is connected

**Parameter:** model  
**Type:** string  
**Description:** Device model name

**Parameter:** username  
**Type:** string  
**Description:** Chassis username

**Parameter:** password  
**Type:** string  
**Description:** Chassis password

**Parameter:** members  
**Type:** list of references to Device  
**Description:** List of devices belonging to this chassis

**Parameter:** slots  
**Type:** list of strings
Description: Slot description per device in chassis

Parameter: `layout`
Type: string
Description: Layout definition for rackview (Format: [-|]x,y e.g: |8,3 or -2,6)

5.2.64 `CloudDirectorRole`: DirectorRole
parent: DirectorRole

Parameter: `bootImageFromProvisioningRole`
Type: boolean
Description: Only allow nodes to boot from images defined in the provisioning role

5.2.65 `CloudGatewayRole`: Role
parent: Role

5.2.66 `CloudJobDescription`: Entity
parent: Entity

Parameter: `name`
Type: string
Description: Job name

Parameter: `script`
Type: string
Description: Script path

Parameter: `workloadManagerJobId`
Type: string
Description: Job identifier according to the workload manager

Parameter: `user`
Type: string
Description: Owner of a job

Parameter: `sizeOfInputData`
Type: unsigned integer
Description: Size of job's input data

Parameter: `sizeOfOutputData`
Type: unsigned integer
Description: Size of job's output data

Parameter: `expectedSizeOfOutputData`
Type: unsigned integer
Description: Expected size of job's output data

Parameter: `inputFiles`
5.2 Entities

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>expandedInputFiles</td>
<td>list of strings</td>
<td>Internal list of input files after labeled wildcards are resolved</td>
</tr>

<td>string</td>
<td>Storage Volume ID</td>
</tr>
<tr>
<td>storageVolumeSize</td>
<td>unsigned integer</td>
<td>Size of Storage Volume</td>
</tr>
</tbody>
</table>
Parameter: storageVolumeDevicePath
Type: string
Description: OS device path

Parameter: fsxInstanceId
Type: string
Description: none

Parameter: fsxInstanceUrl
Type: string
Description: none

Parameter: fsxInstancePathOnDirector
Type: string
Description: none

Parameter: anfVolumeId
Type: string
Description: none

Parameter: anfVolumeUrl
Type: string
Description: none

Parameter: anfVolumePathOnDirector
Type: string
Description: none

Parameter: jobType
Type: enum
Description: Defines the set of operations that will run on job.

Parameter: storageNode
Type: reference to CloudNode or None
Description: Storage Node

Parameter: excludedStorageNodes
Type: list of references to CloudNode
Description: Job will not run on those nodes

Parameter: stdOutFileNames
Type: list of strings
Description: Standard output stream filenames list

Parameter: stdErrFileNames
Type: list of strings
5.2 Entities

Description: Standard error stream filenames list

Parameter: uploadTime
Type: float
Description: Time spent on input data transfer and job pre-run preparations

Parameter: downloadTime
Type: float
Description: Time spent on jobs job results transfer and post-run activities

Parameter: maxUploadTime
Type: float
Description: none

Parameter: maxDownloadTime
Type: float
Description: none

Parameter: jobState
Type: enum
Description: Current state of the job

Parameter: jobStatusMsg
Type: string
Description: Job status

Parameter: jobStatusTimestamp
Type: timestamp
Description: Time when the job status was last changed

Parameter: computeNodes
Type: list of references to Node
Description: List of compute nodes the job was running on

Parameter: numThreads
Type: unsigned integer
Description: none

Parameter: submissionTimestamp
Type: timestamp
Description: Time when the job was submitted

Parameter: endTimestamp
Type: timestamp
Description: Time when the job finished execution

Parameter: extraOptions
Type: list of strings
Description: none

5.2.67 CloudJobSubmissionStatus: Entity
parent: Entity

Parameter: availableExpectedTransferTimes
Type: boolean
Description: none

Parameter: expectedInputDataTransferTimeInSeconds
Type: unsigned integer
Description: none

Parameter: jobName
Type: string
Description: none

Parameter: errMsg
Type: string
Description: none

Parameter: extraOptions
Type: list of strings
Description: none

5.2.68 CloudNode: ComputeNode
parent: ComputeNode

Parameter: cloudSettings
Type: CloudSettings
Description: Submode containing all cloud node settings

5.2.69 CloudProvider: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: tags
Type: list of strings
Description: List of tags that will be assigned to all resources created by BCM under this cloud provider

5.2.70 CloudRegion: Entity
parent: Entity

Parameter: name
Type: string
Description: The name of the cloud region.

Parameter: provider
Type: reference to CloudProvider
Description: Cloud provider

Parameter: timeZoneSettings
Type: TimeZoneSettings or None
Description: Time zone

5.2.71 CloudSettings: Entity
parent: Entity

Parameter: provider
Type: reference to CloudProvider
Description: Cloud provider

Parameter: isStorageTemplate
Type: boolean
Description: none

Parameter: isStorageNode
Type: boolean
Description: none

Parameter: tags
Type: list of strings
Description: List of tags that will be assigned to cloud instance (for supported providers)

5.2.72 CloudStorageActionData: Entity
parent: Entity

Parameter: jobDescription
Type: reference to CloudJobDescription
Description: none

Parameter: typeString
Type: string
Description: none

Parameter: index
Type: unsigned integer
Description: none

Parameter: totalActions
Type: unsigned integer
Description: none
Parameter: status
Type: enum
Description: none

Parameter: errorMessage
Type: string
Description: none

Parameter: isReverse
Type: boolean
Description: none

Parameter: timeoutSecs
Type: unsigned integer
Description: none

Parameter: startTime
Type: timestamp
Description: none

Parameter: retries
Type: unsigned integer
Description: none

Parameter: workloadManager
Type: string
Description: none

Parameter: workloadManagerJobId
Type: string
Description: none

Parameter: jobName
Type: string
Description: none

Parameter: executionNode
Type: reference to Node
Description: none

Parameter: extraOptions
Type: list of strings
Description: none

5.2.73 CloudType: Entity
parent: Entity

Parameter: name
Type: string
Description: The name of the VM type.

Parameter: provider
Type: reference to CloudProvider
Description: Cloud provider

Parameter: cpu
Type: string
Description: The amount of CPU cores.

Parameter: gpu
Type: string
Description: The amount of GPUs.

Parameter: memory
Type: string
Description: The amount of operating system memory.

Parameter: disks
Type: string
Description: AWS: The amount of disks coming with the type. Azure: the maximum amount of data disk which can be attached to the VMs of this type. OCI: The number of local disks available for this shape.

Parameter: description
Type: string
Description: The description.

5.2.74 ClusterSetup: Entity

5.2.74 ClusterSetup: Entity

parent: Entity

Parameter: ref_partition_uuid
Type: UUID
Description: Partition

Parameter: CMID
Type: unsigned integer
Description: CMID

Parameter: databaseVersion
Type: unsigned integer
Description: Database version

Parameter: organization
Type: string
Description: Organization
Parameter: powerOnDelay
Type: float
Description: Delay in seconds between powering on nodes

Parameter: powerOffDelay
Type: float
Description: Delay in seconds between powering off nodes

5.2.75 CMDaemonBackgroundTask: Entity
parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: ref_entity_uuid
Type: UUID
Description: Entity

Parameter: name
Type: string
Description: Name

Parameter: updates
Type: list of strings
Description: Updates

Parameter: exitCode
Type: integer
Description: Exit code

Parameter: status
Type: enum
Description: Status

Parameter: startTime
Type: unsigned integer
Description: Start time

Parameter: endTime
Type: unsigned integer
Description: End time

5.2.76 CMDaemonFailover: Entity
parent: Entity

Parameter: secondaryHeadNode
Type: reference to HeadNode or None
Description: Secondary/failover head node

Parameter: keepalive
Type: unsigned integer
Description: Interval between pings

Parameter: warntime
Type: unsigned integer
Description: How quickly to issue a 'late' warning

Parameter: deadtime
Type: unsigned integer
Description: How quickly to decide that a node in a cluster is dead

Parameter: initdead
Type: unsigned integer
Description: Time between starting failover and declaring a cluster node dead

Parameter: quorumTime
Type: unsigned integer
Description: Time before deciding quorum ended in failure

Parameter: mountScript
Type: string
Description: Script that mounts the shared storage device when a node becomes the active headnode

Parameter: unmountScript
Type: string
Description: Script that unmounts the shared storage device when a node stops being the active headnode

Parameter: failoverNetwork
Type: reference to Network or None
Description: Network for failover ping

Parameter: disableAutomaticFailover
Type: boolean
Description: When automatic failover is disabled the passive headnode will not take over if it detects the active headnode is dead

Parameter: preFailoverScript
Type: string
Description: Prefailover script will be run on both headnodes before failover has begun

Parameter: postFailoverScript
Type: string
Description: Postfailover script will be run on both headnodes after failover has completed

Parameter: ipTakeOverMethod
Type: enum
Description: The manner in which shared IP gets transferred

Parameter: ipTakeOverScript
Type: string
Description: IP take over script

5.2.77 CMDaemonFailoverGroup: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: nodes
Type: list of references to ComputeNode
Description: List of nodes belonging to this group

Parameter: alsoTakeOverAfterGraciousShutdown
Type: boolean
Description: Also perform automatic failover if the active group member was gracefully shut down

Parameter: disableAutomaticFailover
Type: boolean
Description: When automatic failover is disabled the no node in the group will not take over if the active node is dead

Parameter: warnTime
Type: unsigned integer
Description: How quickly to issue a 'late' warning

Parameter: deadtime
Type: unsigned integer
Description: How quickly to decide that a node in a group is dead

Parameter: mountScript
Type: string
Description: Script that mounts the shared storage device when a node becomes the active head node

Parameter: unmountScript
Type: string
Description: Script that unmounts the shared storage device when a node stoppes being the active head node

Parameter: preFailoverScript
5.2 Entities

Type: string
Description: Prefailover script will be run on all nodes before failover has begun

Parameter: postFailoverScript
Type: string
Description: Postfailover script will be run on all nodes after failover has completed

Parameter: ipTakeOverMethod
Type: enum
Description: The manner in which shared IP gets transferred

Parameter: ipTakeOverScript
Type: string
Description: IP take over script

5.2.78 CMDaemonFailoverGroupStatus: Entity

parent: Entity

Parameter: failoverStage
Type: integer
Description: Failover stage

Parameter: ref_active_node_uuid
Type: UUID
Description: Active node key

Parameter: activeUpTime
Type: timestamp
Description: Active up time

Parameter: activeDownTime
Type: timestamp
Description: Active down time

Parameter: activeUpCount
Type: unsigned integer
Description: Active up count

Parameter: failoverThreadRunning
Type: boolean
Description: Failover thread running

Parameter: infoMessage
Type: string
Description: Information messages gather during the last failover

Parameter: errorMessage
Type: string
Description: Error messages gather during the last failover

Parameter: activeGraciousShutdown
Type: boolean
Description: True if the previous active head reported a graceful shutdown

5.2.79 CMDaemonFailoverPeer: Entity
parent: Entity

Parameter: ref_head_node_uuid
Type: UUID
Description: Head node

Parameter: status
Type: list of strings
Description: Status

Parameter: failCount
Type: list of unsigned numbers
Description: Number of sequential times failure was detected

5.2.80 CMDaemonFailoverStatus: Entity
parent: Entity

Parameter: ref_head_node_uuid
Type: UUID
Description: Head node to which handled request

Parameter: ref_active_head_node_uuid
Type: UUID
Description: Active head node

Parameter: failoverId
Type: unsigned integer
Description: Head node with the highest failover ID will be active

Parameter: error
Type: boolean
Description: Head node is in error state

Parameter: peers
Type: list of CMDaemonFailoverPeer
Description: Peer status per head node in the failover group

5.2.81 CMDaemonStatus: Entity
parent: Entity

Parameter: version
Type: string
Description: CMDaemon version

Parameter: state
Type: string
Description: CMDaemon state

Parameter: myTime
Type: timestamp
Description: System time

Parameter: startTime
Type: timestamp
Description: CMDaemon start time

Parameter: uptime
Type: unsigned integer
Description: System uptime

Parameter: utime
Type: float
Description: User time spend by CMDaemon

Parameter: stime
Type: float
Description: System time spend by CMDaemon

Parameter: memused
Type: unsigned integer
Description: Memory used by CMDaemon

Parameter: sessionCount
Type: unsigned integer
Description: Total Number of cmsh/cmgui/python/node sessions

Parameter: activeSessionCount
Type: unsigned integer
Description: Number of currently active sessions

Parameter: httpdNumWorkers
Type: unsigned integer
Description: Number of threads handing http requests

Parameter: httpdNumFreeWorkers
Type: unsigned integer
Description: Number of threads free to handle http requests

Parameter: httpdConnectionCounter
Type: unsigned integer
Description: Total number of http connections handled by CMDaemon

Parameter: httpdRequestCounter
Type: unsigned integer
Description: Total number of http request handled by CMDaemon

Parameter: httpdBytesRead
Type: unsigned integer
Description: Bytes read from http request

Parameter: httpdBytesWritten
Type: unsigned integer
Description: Bytes written in response to http requests

5.2.82 CMJobConfig: Entity
parent: Entity

Parameter: name
Type: string
Description: CMJob config name

Parameter: provider
Type: reference to CloudProvider
Description: Cloud provider

Parameter: storageNodePolicies
Type: list of StorageNodePolicy
Description: Storage node policies

Parameter: activeStorageNodePolicy
Type: StorageNodePolicy or None
Description: This policy will be used to start new storage nodes

Parameter: extraOptions
Type: list of strings
Description: Extra options

5.2.83 CMJobIntermediateStorage: Entity
parent: Entity

5.2.84 CMService: Entity
parent: Entity

Parameter: name
Type: string
Description: Name
5.2 Entities

Parameter: tokens
Type: list of strings
Description: Tokens belonging to this service

5.2.85 ComputeNode: Node

parent: Node

Parameter: installMode
Type: string
Description: InstallMode to be used by default, if empty use category installMode

Parameter: nextBootInstallMode
Type: string
Description: InstallMode to be used during the next boot, will be cleared during boot

Parameter: blockDevicesClearedOnNextBoot
Type: list of strings
Description: List of block devices that will be cleared during the next boot

Parameter: initialize
Type: string
Description: Node specific initialize script

Parameter: finalize
Type: string
Description: Node specific finalize script

Parameter: raidconf
Type: string
Description: Node specific Hardware RAID configuration

Parameter: category
Type: reference to Category
Description: Category to which this node belongs

Parameter: disksetup
Type: string
Description: Node specific disk setup

Parameter: excludeListFull
Type: string
Description: Exclude list for full install

Parameter: excludeListSync
Type: string
Description: Exclude list for sync install

Parameter: excludeListUpdate
Type: string
Description: Exclude list for update

Parameter: excludeListGrab
Type: string
Description: Exclude list for grabbing to an existing image

Parameter: excludeListGrabnew
Type: string
Description: Exclude list for grabbing to a new image

Parameter: nodeInstallerDisk
Type: boolean
Description: The node has its own node installer disk

Parameter: installBootRecord
Type: boolean
Description: Install boot record on local disk

Parameter: managementNetwork
Type: reference to Network or None
Description: Determines what network should be used for management traffic. If not set, category or partition setting is used.

Parameter: dataNode
Type: boolean
Description: If enabled the node will never do a FULL install without explicit user confirmation

Parameter: allowNetworkingRestart
Type: boolean
Description: Allow node to update ifcfg files and restart networking

Parameter: softwareImageProxy
Type: SoftwareImageProxy or None
Description: Software image used by node

Parameter: kernelVersion
Type: string
Description: Kernel version used

Parameter: kernelParameters
Type: string
Description: Kernel parameters passed to the kernel at boot time

Parameter: kernelOutputConsole
Type: string
5.2 Entities

Description: Kernel output console used at boot time

Parameter: modules
Type: list of KernelModule
Description: Manage kernel modules loaded in this node

Parameter: bootLoader
Type: enum
Description: Boot loader

Parameter: bootLoaderProtocol
Type: enum
Description: Boot loader protocol for retrieving initrd and vmlinuz

Parameter: bootLoaderFile
Type: string
Description: Alternative boot loader file

Parameter: fips
Type: enum
Description: Federal Information Processing Standard Security Requirements

Parameter: templateNode
Type: boolean
Description: Indicate this is a template node and should not be powered on and booted

Parameter: fromTemplateNode
Type: UUID
Description: Indicate from which template node this node was copied

5.2.86 ConfigFileVersion: Entity

parent: Entity

Parameter: node_uuid
Type: UUID
Description: Node

Parameter: filename
Type: string
Description: File name

Parameter: content
Type: string
Description: Content of the file

Parameter: creationTime
Type: timestamp
Description: Creation time

5.2.87 ConfigurationOverlay: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: allHeadNodes
Type: boolean
Description: All head nodes

Parameter: nodes
Type: list of references to Node
Description: List of nodes belonging to this group

Parameter: categories
Type: list of references to Category
Description: List of categories belonging to this group

Parameter: customizationFiles
Type: list of CustomizationFile
Description: Config file customizations

Parameter: roles
Type: list of Role
Description: Assign the roles

Parameter: priority
Type: integer
Description: Priority of the roles, node roles have a 750 priority, and category roles 250, set to -1 disable the overlay

5.2.88 ConnectivityCheckerSubSystemInfo: SubSystemInfo
parent: SubSystemInfo

Parameter: stopped
Type: unsigned integer
Description: Stopped

Parameter: updateCallback
Type: unsigned integer
Description: Update callback defined

Parameter: changeCallback
Type: unsigned integer
5.2 Entities

Description: Change callback defined

Parameter: `ttl`
Type: unsigned integer
Description: ttl

Parameter: `idOffset`
Type: unsigned integer
Description: Ping ID offset

Parameter: `interval`
Type: unsigned integer
Description: Interval

Parameter: `timeout`
Type: unsigned integer
Description: Timeout

Parameter: `sequence`
Type: unsigned integer
Description: Sequence ID

Parameter: `activeSequences`
Type: unsigned integer
Description: Active ping sequences still being waited for

Parameter: `activeNodeSequences`
Type: unsigned integer
Description: Number of nodes in active ping sequences still being waited for

Parameter: `nodes`
Type: unsigned integer
Description: Nodes being pinged

Parameter: `nodeSequences`
Type: unsigned integer
Description: Number of pings nodes are waiting for

Parameter: `updates`
Type: unsigned integer
Description: Total number of handled updates

Parameter: `changes`
Type: unsigned integer
Description: Total number of handled changes
5.2.89 Consolidator: Entity

parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: maxAge
Type: float
Description: Maximal age of historic data, 0 for infinite

Parameter: maxSamples
Type: unsigned integer
Description: Maximal samples of historic data, 0 for infinite

Parameter: interval
Type: float
Description: Sampling interval

Parameter: offset
Type: float
Description: Time offset for sampling interval

Parameter: kind
Type: enum
Description: Kind of consolidation to be done

5.2.90 ContainerInfo: Entity

parent: Entity

Parameter: name
Type: string
Description: The name of the container

Parameter: containerId
Type: string
Description: The id

Parameter: image
Type: string
Description: The name of the image

Parameter: imageId
Type: string
Description: The sha id of the image

Parameter: state
Type: string
5.2 Entities

Description: The state of the container

Parameter: startTime
Type: timestamp
Description: The time when the container started

Parameter: lastTerminationState
Type: string
Description: The last state when the container terminated

Parameter: reason
Type: string
Description: The reason for the termination

Parameter: lastExitCode
Type: integer
Description: The exit code of the container

Parameter: previousStartTime
Type: timestamp
Description: The previous start time

Parameter: previousFinishTime
Type: timestamp
Description: The previous finish time

Parameter: ready
Type: boolean
Description: Whether the container is ready or not

Parameter: restartCount
Type: integer
Description: The number of restarts of the container

Parameter: environmentVariables
Type: list of strings
Description: The environment variables passed to the container

5.2.91 CustomizationEntry: Entity

parent: Entity

Parameter: key
Type: string
Description: Name of the key

Parameter: value
Type: string
Description: Value for the key

Parameter: enabled
Type: boolean
Description: none

Parameter: action
Type: enum
Description: Determines how entries are added

Parameter: formatting
Type: string
Description: none

Parameter: separator
Type: string
Description: none

5.2.92 CustomizationFile: Entity

Parameter: name
Type: string
Description: none

Parameter: entries
Type: list of CustomizationEntry
Description: Config file customization entries

Parameter: label
Type: string
Description: none

Parameter: type
Type: enum
Description: Determines file type

Parameter: managedsection
Type: enum
Description: Determines how cmdaemon should customize the file

Parameter: formatting
Type: string
Description: none

Parameter: enabled
Type: boolean
5.2 Entities

Description: none

5.2.93 Device: Entity

parent: Entity

Parameter: tag
Type: string
Description: Hardware tag

Parameter: hostname
Type: string
Description: Hostname

Parameter: mac
Type: MAC
Description: MAC address

Parameter: defaultGateway
Type: IP
Description: Default gateway for the device

Parameter: creationTime
Type: timestamp
Description: Date on which node was defined

Parameter: partition
Type: reference to Partition
Description: Partition to which this device belongs

Parameter: switchPorts
Type: list of SwitchPort
Description: Switch ports

Parameter: powerDistributionUnits
Type: list of PDUPort
Description: List of outlets on powerdistributionunits

Parameter: rack
Type: RackPosition or None
Description: Name of the rack in which the device resides

Parameter: indexInsideContainer
Type: unsigned integer
Description: Index inside container object (used for drawing twins/chassis inside rackview)

Parameter: powerControl
Type: string
**Description:** Specifies which type of power control feature is being used (values: none, apc, custom, cloud, ipmi0, ilo0, drac0, rf0, cimc0 or rshim0)

**Parameter:** customPowerScript
**Type:** string
**Description:** Script that will be used to perform power on/off/reset/status operations

**Parameter:** customPowerScriptArgument
**Type:** string
**Description:** Argument for the custom power script

**Parameter:** customPingScript
**Type:** string
**Description:** Script that will be used to ping a device

**Parameter:** customPingScriptArgument
**Type:** string
**Description:** Argument for the custom ping script

**Parameter:** notes
**Type:** string
**Description:** Administrator notes

**Parameter:** userdefined1
**Type:** string
**Description:** A free text field passed to custom scripts

**Parameter:** userdefined2
**Type:** string
**Description:** A free text field passed to custom scripts

**Parameter:** userDefinedResources
**Type:** list of strings
**Description:** User defined resources used to filter monitoring data producers

**Parameter:** supportsGNSS
**Type:** boolean
**Description:** Supports GNSS location

5.2.94 DeviceStatus: Entity
**parent:** Entity

**Parameter:** ref_device_uuid
**Type:** UUID
**Description:** Device

**Parameter:** status
**Type:** enum
Description: Status determined by ping and report

Parameter: reportedStatus
Type: enum
Description: Reported status

Parameter: reportedStatusTimestamp
Type: unsigned integer
Description: Reported status timestamp in steady clock epoch milliseconds

Parameter: terminated
Type: boolean
Description: none

Parameter: closed
Type: boolean
Description: none

Parameter: muted
Type: boolean
Description: none

Parameter: burning
Type: boolean
Description: none

Parameter: unassigned
Type: boolean
Description: none

Parameter: noPingMethod
Type: boolean
Description: none

Parameter: nullIdentifier
Type: boolean
Description: none

Parameter: additionalCost
Type: boolean
Description: none

Parameter: restartRequired
Type: boolean
Description: none

Parameter: healthCheckFailed
Type: boolean
Description: none

Parameter: healthCheckUnknown
Type: boolean
Description: none

Parameter: provisioningFailed
Type: boolean
Description: none

Parameter: stateFlapping
Type: boolean
Description: none

Parameter: stateFlappingCheckTime
Type: unsigned integer
Description: none

Parameter: pingable
Type: boolean
Description: none

Parameter: sshable
Type: boolean
Description: none

Parameter: infoMessage
Type: string
Description: none

Parameter: userMessage
Type: string
Description: none

Parameter: toolMessage
Type: string
Description: none

Parameter: restartRequiredReasons
Type: list of strings
Description: none

Parameter: gracePeriod
Type: unsigned integer
Description: none
5.2 Entities

Parameter: powerResetOnUnreachableCount
Type: unsigned integer
Description: none

Parameter: failBeforeDown
Type: unsigned integer
Description: none

Parameter: updateIndex
Type: unsigned integer
Description: none

Parameter: updateDisplay
Type: boolean
Description: none

Parameter: hasClientDaemon
Type: boolean
Description: none

Parameter: allowDataNodeFullInstall
Type: boolean
Description: none

5.2.95 DIGITSRole: Role
parent: Role

Parameter: version
Type: string
Description: DIGITS version

Parameter: port
Type: unsigned integer
Description: DIGITS port

Parameter: jobsDir
Type: string
Description: Location where job files are stored. Defined in DIGITS_JOBS_DIR

Parameter: logfileFilename
Type: string
Description: File for saving log messages. Defined in DIGITS_LOGFILE_FILENAME

Parameter: logfileLevel
Type: enum
Description: Minimum log message level to be saved (DEBUG/INFO/WARNING/ERROR/Critical). Defined in DIGITS_LOGFILE_LEVEL
Parameter: `serverName`
Type: string
Description: The name of the server (accessible in the UI under 'Info'). Default is the system hostname. Defined in DIGITS_SERVER_NAME

Parameter: `modelStoreUrl`
Type: string
Description: A list of URL's, separated by comma. Default is the official NVIDIA store. Defined in DIGITS_MODEL_STORE_URL

Parameter: `urlPrefix`
Type: string
Description: A path to prepend before every URL. Sets the home-page to be at 'http://localhost/custom-prefix' instead of 'http://localhost/'. Defined in DIGITS_URL_PREFIX

Parameter: `caffeRoot`
Type: string
Description: Path to your local Caffe build. Should contain build/tools/caffe and python/caffe/. Defined in CAFFE_ROOT

Parameter: `torchRoot`
Type: string
Description: Path to your local Torch build. Should contain install/bin/th. Defined in TORCH_ROOT

Parameter: `tensorflowRoot`
Type: string
Description: Path to your local TensorFlow build. Defined in TENSORFLOW_ROOT

5.2.96 DirectorRole: Role

parent: Role

Parameter: `syncFSParts`
Type: enum
Description: Sync FSParts mode

Parameter: `fsparts`
Type: list of references to FSPart
Description: FSParts

Parameter: `disableAutomaticExports`
Type: boolean
Description: Disable creation of automatic filesystem exports

Parameter: `createHomeDirectories`
Type: enum
Description: Create home directories for ldap users

Parameter: `whitelistUsers`
5.2 Entities

Type: list of strings
Description: Whitelist users

Parameter: whitelistGroups
Type: list of strings
Description: Whitelist groups

5.2.97 DiskAssertion: Entity
parent: Entity

Parameter: name
Type: string
Description: Name.

Parameter: script
Type: string
Description: Assertion script.

Parameter: args
Type: string
Description: Script arguments.

5.2.98 DiskDevice: Entity
parent: Entity

Parameter: requiredSize
Type: string
Description: Required Size

Parameter: vendor
Type: string
Description: Required Vendor

Parameter: blockDevs
Type: list of strings
Description: Block Devices

Parameter: partitions
Type: list of DiskPartition
Description: Partitions

Parameter: assertions
Type: list of DiskAssertion
Description: Assertions

5.2.99 DiskInfo: Entity
parent: Entity

Parameter: name
Type: string
Description: none

Parameter: model
Type: string
Description: none

Parameter: vendor
Type: string
Description: none

Parameter: size
Type: unsigned integer
Description: none

Parameter: rev
Type: string
Description: none

Parameter: ioScheduler
Type: string
Description: none

5.2.100 DiskPartition: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: size
Type: string
Description: Size

Parameter: type
Type: string
Description: Type

Parameter: mountpoint
Type: string
Description: Mount point

Parameter: mountoptions
Type: string
Description: Mount options

Parameter: filesystem
Type: string
5.2 Entities

Description: Filesystem

5.2.101 DiskPartitionInfo: Entity

parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: name
Type: string
Description: The partition name

Parameter: majorID
Type: unsigned integer
Description: Major

Parameter: minorID
Type: unsigned integer
Description: Minor

Parameter: blocks
Type: unsigned integer
Description: Blocks

Parameter: cipher
Type: string
Description: Encryption cipher

Parameter: slaves
Type: list of strings
Description: Slaves

Parameter: deviceMapper
Type: string
Description: Device mapper

5.2.102 DiskRaid: Entity

parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: size
Type: string
Description: Size
Parameter:  level
Type:  integer
Description:  Level

Parameter:  partitions
Type:  list of strings
Description:  Partitions

Parameter:  mountpoint
Type:  string
Description:  Mount point

Parameter:  mountoptions
Type:  string
Description:  Mount options

Parameter:  filesystem
Type:  string
Description:  Filesystem

Parameter:  swap
Type:  boolean
Description:  Use for swap

5.2.103  DiskSetup: Entity
parent:  Entity

Parameter:  devices
Type:  list of DiskDevice
Description:  List of block devices.

Parameter:  raids
Type:  list of DiskRaid
Description:  List of raid devices.

Parameter:  volumeGroups
Type:  list of DiskVolumeGroup
Description:  List of volume groups.

Parameter:  diskless
Type:  boolean
Description:  If set the node will have its root file-system in RAM.

Parameter:  maxMemSize
Type:  string
Description:  Maximum amount (in bytes) of RAM the root file-system can use.
5.2.104 DiskVolume: Entity

**parent:** Entity

- **Parameter:** name
  - **Type:** string
  - **Description:** Name

- **Parameter:** size
  - **Type:** string
  - **Description:** Size

- **Parameter:** mountpoint
  - **Type:** string
  - **Description:** Mount point

- **Parameter:** mountoptions
  - **Type:** string
  - **Description:** Mount options

- **Parameter:** filesystem
  - **Type:** string
  - **Description:** Filesystem

5.2.105 DiskVolumeGroup: Entity

**parent:** Entity

- **Parameter:** name
  - **Type:** string
  - **Description:** Name

- **Parameter:** extentSize
  - **Type:** string
  - **Description:** Size

- **Parameter:** physicalVolumes
  - **Type:** list of strings
  - **Description:** Physical volumes

- **Parameter:** logicalVolumes
  - **Type:** list of DiskVolume
  - **Description:** Logical volumes

5.2.106 DnsRole: Role

**parent:** Role

- **Parameter:** nodegroups
  - **Type:** list of references to NodeGroup
Description: List of node groups which can boot from this node

Parameter: categories
Type: list of references to Category
Description: List of categories which can boot from this node

Parameter: racks
Type: list of references to Rack
Description: List of racks which can boot from this node

Parameter: allowQuery
Type: list of strings
Description: List of additional free hosts to allow queries from

Parameter: options
Type: list of strings
Description: List of additional key=value pairs to add to the options

Parameter: maxCacheSize
Type: unsigned integer
Description: Maximum cache size

Parameter: cleaningInterval
Type: unsigned integer
Description: Cleaning cache interval

Parameter: maxCacheTTL
Type: unsigned integer
Description: Maximal cache TTL

Parameter: maxNegativeCacheTTL
Type: unsigned integer
Description: Maximal cache negative response TTL

5.2.107 DockerHostRole:Role

parent: Role

Parameter: spool
Type: string
Description: Root of the Docker runtime

Parameter: tmpDir
Type: string
Description: Location used for temporary files (token $spool is replaced to path to docker runtime root directory)

Parameter: enableSelinux
Type: boolean
Description: Enable selinux support in docker daemon

Parameter: defaultUlimits
Type: list of strings
Description: Set the default ulimit options to use for all containers

Parameter: debug
Type: boolean
Description: Enable debug mode

Parameter: logLevel
Type: string
Description: Set the logging level

Parameter: bridgeIp
Type: string
Description: Network bridge IP

Parameter: bridge
Type: string
Description: Attach containers to a network bridge

Parameter: mtu
Type: unsigned integer
Description: Set the containers network MTU (in bytes)

Parameter: apiSockets
Type: list of strings
Description: Daemon socket(s) to connect to (-H docker daemon option)

Parameter: iptables
Type: boolean
Description: Enable addition of iptables rules

Parameter: userNamespaceRemap
Type: string
Description: User/Group setting for user namespaces

Parameter: insecureRegistries
Type: list of strings
Description: If you have a registry secured with https but do not have proper certs distributed, you can tell docker to not look for full authorization by adding the registry to this list. Accepted Format: CIDR or hostname:port

Parameter: enableTls
Type: boolean
Description: Use TLS

Parameter: verifyTls
Type: boolean
Description: Use TLS and verify the remote

Parameter: tlsCa
Type: string
Description: Trust certs signed only by this CA

Parameter: tlsCertificate
Type: string
Description: Path to TLS certificate file

Parameter: tlsKey
Type: string
Description: Path to TLS key file

Parameter: certificatesPath
Type: string
Description: Path to docker certificates

Parameter: storageBackends
Type: list of DockerStorageBackend
Description: Docker storage backends

Parameter: containerdSocket
Type: string
Description: Path to containerd socket

Parameter: runtime
Type: string
Description: Docker runtime

Parameter: options
Type: list of strings
Description: Additional parameters for docker daemon

5.2.108 DockerStorageAufsBackend: DockerStorageBackend
parent: DockerStorageBackend

Parameter: options
Type: list of strings
Description: Extra options used for the AUFS storage backend
5.2.109 DockerStorageBackend: Entity
parent: Entity

Parameter: name
Type: string
Description: Docker storage backend name

5.2.110 DockerStorageDeviceMapperBackend: DockerStorageBackend
parent: DockerStorageBackend

Parameter: loopDataSize
Type: string
Description: Size to use when creating the loopback file for the 'data' device which is used for the thin pool (driver option: dm.loopdatasize)

Parameter: loopMetadataSize
Type: string
Description: Size to use when creating the loopback file for the 'metadadata' device which is used for the thin pool (driver option: dm.loopmetadatasize)

Parameter: baseSize
Type: string
Description: Size to use when creating the base device, which limits the size of images and container (driver option: dm.basesize)

Parameter: poolDevice
Type: string
Description: Custom block storage device to use for the thin pool (driver option: dm.thinpooldev)

Parameter: filesystem
Type: string
Description: Filesystem type to use for the base device (driver option: dm.fs)

Parameter: blockSize
Type: string
Description: Custom blocksize to use for the thin pool (driver option: dm.blocksize)

Parameter: blkDiscard
Type: boolean
Description: Enables or disables the use of blkdiscard when removing devicemapper devices (driver option: dm.blkdiscard)

Parameter: mkfsArguments
Type: list of strings
Description: Extra mkfs arguments to be used when creating the base device (drive option: dm.mkfsarg)

Parameter: mountOptions
Type: list of strings
Description: Extra mount options used when mounting the thin devices (drive option: dm.mountopt)

5.2.111 DockerStorageOverlay2Backend: DockerStorageBackend

parent: DockerStorageBackend

Parameter: overrideKernelCheck
Type: boolean
Description: Override the kernel check to allow overlay2

Parameter: size
Type: string
Description: Default max size of the container (empty = unlimited)

Parameter: options
Type: list of strings
Description: Extra options used for the AUFS storage backend

5.2.112 DPUIInfo: Entity

parent: Entity

Parameter: index
Type: list of unsigned numbers
Description: none

Parameter: name
Type: list of strings
Description: none

Parameter: info
Type: string
Description: none

Parameter: opnStr
Type: string
Description: none

5.2.113 DPUNode: ComputeNode

parent: ComputeNode

Parameter: dpuSettings
Type: DPUSettings or None
Description: Submode containing all DPU node settings

Parameter: hostNode
Type: reference to Node
Description: Host node
5.2 Entities

5.2.114 DPUSettings: Entity

parent: Entity

Parameter: operation_mode
Type: enum
Description: Operation mode

Parameter: display_level
Type: enum
Description: Display level

Parameter: boot_mode
Type: enum
Description: Boot mode

Parameter: drop_mode
Type: enum
Description: Drop mode

Parameter: boot_timeout
Type: unsigned integer
Description: Boot timeout

Parameter: boot_order
Type: list of strings
Description: Boot order

Parameter: interface_mode_port1
Type: enum
Description: Interface mode port 1

Parameter: interface_mode_port2
Type: enum
Description: Interface mode port 2

Parameter: hw_offload
Type: boolean
Description: Offload OVS to hardware

Parameter: keyValueSettings
Type: KeyValueSettings or None
Description: Key value settings which can be passed to the DPU manage script

5.2.115 DrainAction: Entity

parent: Entity

Parameter: node
Type: reference to Node
Description:  Node

Parameter:  actions
Type:  list of references to MonitoringAction
Description:  Actions to execute after the node has been drained

5.2.116  DrainResult: Entity
parent:  Entity

Parameter:  ref_entity_uuid
Type:  UUID
Description:  Entity

Parameter:  success
Type:  boolean
Description:  Success

Parameter:  ref_node_uuids
Type:  list of unsigned numbers
Description:  Node

Parameter:  ref_queue_uuids
Type:  list of unsigned numbers
Description:  Job queue

Parameter:  reason
Type:  list of strings
Description:  Reason

Parameter:  result
Type:  enum
Description:  Result

5.2.117  EC2AvailabilityZone: Entity
parent:  Entity

Parameter:  name
Type:  string
Description:  Name

5.2.118  EC2EBSStorage: EC2Storage
parent:  EC2Storage

Parameter:  volumeId
Type:  string
Description:  Volume ID assigned by EC2

Parameter:  size
Type:  unsigned integer
Description: Size

Parameter: persistent
Type: boolean
Description: Persistent storage will not be removed when instance is removed

Parameter: availabilityZone
Type: string
Description: Availability zone set by EC2

Parameter: creationTime
Type: timestamp
Description: Time of creation in EC2

Parameter: status
Type: string
Description: Status of EBS volume in EC2

Parameter: volumeType
Type: enum
Description: Specifies what type of EBS volume to use

Parameter: iops
Type: unsigned integer
Description: Specifies the IOPS rate for the provisioned IOPS volume type

Parameter: encrypted
Type: boolean
Description: none

Parameter: snapshotId
Type: string
Description: ID of the snapshot which should be used to instantiate the new disk. This field can be used to speed up node provisioning by first provisioning a cloud compute node, creating a snapshot of its volumes, and then setting that snapshot ID in this field for remaining cloud compute nodes.

5.2.119 EC2EphemeralStorage: EC2Storage
parent: EC2Storage

Parameter: volumeId
Type: string
Description: Ephemral ID

Parameter: size
Type: unsigned integer
Description: Size
5.2.120  EC2Image: Entity
parent: Entity

Parameter: name
 Type: string
Description: The name of the image.

Parameter: id
 Type: string
Description: The AMI ID

Parameter: apiHash
 Type: string
Description: The API hash used to select compatible images.

Parameter: regionName
 Type: string
Description: The name of the image region.

5.2.121  EC2OnDemandPrice: Entity
parent: Entity

Parameter: regionName
 Type: string
Description: Region name.

Parameter: instanceType
 Type: string
Description: Instance type.

Parameter: price
 Type: string
Description: On-demand price.

Parameter: currency
 Type: string
Description: Currency.

5.2.122  EC2Provider: CloudProvider
parent: CloudProvider

Parameter: APIRegionName
 Type: string
Description: AWS region to be used for listing available regions

Parameter: accessKeyId
 Type: string
5.2 Entities

Description: AWS access key ID

Parameter: accessKeySecret
Type: string

Description: AWS secret access key

Parameter: iamRoleName
Type: string

Description: IAM role to get AWS credentials from. The role must be assigned to the COD-AWS head node.

Parameter: VPCs
Type: list of EC2VPC
Description: List of VPCs

Parameter: regions
Type: list of references to EC2Region
Description: none

Parameter: defaultRegion
Type: reference to EC2Region or None
Description: Default region to start instances in

Parameter: defaultType
Type: reference to EC2Type or None
Description: Default type for instances

Parameter: defaultDirectorType
Type: reference to EC2Type or None
Description: Default type for cloud director instances

Parameter: imageOwners
Type: list of strings
Description: AWS Account IDs to be used to search for images

Parameter: addJobBasedTag
Type: boolean
Description: Enable automatic tagging of cloud resources with information of running cloud jobs to allow cost monitoring

Parameter: JobIdTagName
Type: string
Description: The name of the tag that contains the job ID when using job based tagging

Parameter: JobAccountTagName
Type: string
Description: The name of the tag that contains the job account when using job based tagging

Parameter: JobUserTagName
Type: string
Description: The name of the tag that contains the user name when using job based tagging

Parameter: JobNameTagName
Type: string
Description: The name of the tag that contains the job name when using job based tagging

Parameter: billingAccessKeyId
Type: string
Description: AWS billing access key ID

Parameter: billingAccessKeySecret
Type: string
Description: AWS billing secret access key

Parameter: marketplaceUsePolicy
Type: enum
Description: Preference towards using marketplace AMIs

5.2.123 EC2Region: CloudRegion
parent: CloudRegion

Parameter: url
Type: string
Description: url

Parameter: availabilityZones
Type: list of EC2AvailabilityZone
Description: Availability zones

5.2.124 EC2RegionAMI: Entity
parent: Entity

Parameter: region
Type: reference to EC2Region
Description: The cloud region containing this AMI

Parameter: amiID
Type: string
Description: The AMI ID

5.2.125 EC2Settings: CloudSettings
parent: CloudSettings

Parameter: instanceId
Type: string
Description: Instance-ID provided by EC2

Parameter: spotId
Type: string
Description: Spot-request-ID provided by EC2

Parameter: sshConnectString
Type: string
Description: SSH connection string provided by EC2

Parameter: externalIP
Type: IP
Description: The external IP address as set by the cloudprovider

Parameter: releaseStaticIPOnTermination
Type: boolean
Description: Release Static IP on termination of the instance

Parameter: useKernelAndInitrdFromTheSoftwareImage
Type: boolean
Description: Make the cloud node’s node-installer download the kernel and the initrd from the software image configured for this cloud node and then reboot the cloud node to use those, instead of using the kernel and initrd already present on the node-installer’s cloud image.

Parameter: type
Type: reference to EC2Type or None
Description: Type for instance

Parameter: region
Type: reference to EC2Region or None
Description: Region for instance

Parameter: imageId
Type: string
Description: ID of the AMI used to create instance ('latest': use latest AMI, "": inherit AMI from cloud provider)

Parameter: useMarketplaceImage
Type: boolean
Description: Whether a paid AWS Marketplace is used for this node

Parameter: allocatePublicIP
Type: boolean
Description: Whether to allocate a public IP for this instance. Always true for cloud directors.

Parameter: sourceDestinationCheck
Type: boolean
Description: Whether to perform source/destination checks on the instance traffic.

Parameter: `kernel`
Type: `string`
Description: Kernel used to create instance

Parameter: `initrd`
Type: `string`
Description: Initial ramdisk used to create instance

Parameter: `options`
Type: `string`
Description: User defined options passed to EC2 on instance creation

Parameter: `storage`
Type: `list of EC2Storage`
Description: Assign EC2 storage

Parameter: `cpuOptions`
Type: `string`
Description: CPU Options in AWS shorthand syntax (e.g: CoreCount=8,ThreadsPerCore=1)

Parameter: `spotPrice`
Type: `float`
Description: Maximum price to start instance with

Parameter: `spotPersistent`
Type: `boolean`
Description: Persistent spot instances are requested again after they are automatically stopped, because price became to high

Parameter: `useNonDefaultVirtualizationType`
Type: `boolean`
Description: `none`

Parameter: `placementGroup`
Type: `string`
Description: Start instance in the specified placement group

Parameter: `iamInstanceProfile`
Type: `string`
Description: Name or ARN of instance profile to associate with

Parameter: `capacityReservationPreference`
Type: `string`
Description: Capacity reservation preference ('open' or 'none')
Parameter: capacityReservationId
Type: string
Description: Capacity reservation ID

Parameter: capacityReservationResourceGroupARN
Type: string
Description: Capacity reservation resource group ARN

### 5.2.126 EC2SpotPrice: Entity
parent: Entity

Parameter: az
Type: string
Description: Availability zone.

Parameter: instanceType
Type: string
Description: Instance type.

Parameter: price
Type: string
Description: Spot price.

Parameter: timestamp
Type: unsigned integer
Description: Price timestamp.

### 5.2.127 EC2Storage: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: drive
Type: string
Description: Mount device as /dev/?

Parameter: tags
Type: list of strings
Description: List of tags that will be assigned to storage

### 5.2.128 EC2Type: CloudType
parent: CloudType

Parameter: virtualizationType
Type: string
Description: Virtualization type.
5.2.129 EC2VPC: Entity

**parent:** Entity

**Parameter:** name
**Type:** string
**Description:** User-defined name of the private cloud

**Parameter:** vpcId
**Type:** string
**Description:** AWS VPC identifier

**Parameter:** defaultImageId
**Type:** string
**Description:** ID of the default AMI to start instances with (‘latest’ means using the latest AMI)

**Parameter:** mainRouteTable
**Type:** string
**Description:** Main route table AWS ID

**Parameter:** defaultACL
**Type:** string
**Description:** Default network access controll list ID

**Parameter:** internetGatewayId
**Type:** string
**Description:** The AWS ID of the internet gateway assigned to this VPC

**Parameter:** region
**Type:** reference to EC2Region
**Description:** AWS region of the VPC

**Parameter:** subnets
**Type:** list of references to Network
**Description:** Subnets (networks) associated with the VPC

**Parameter:** baseAddress
**Type:** IP
**Description:** Base IP address of the VPC

**Parameter:** netmaskBits
**Type:** integer
**Description:** Number of netmask Bits

**Parameter:** securityGroupId
**Type:** string
**Description:** Security group ID of the cloud nodes
Parameter: `securityGroupDirector`
Type: `string`
Description: Security group ID of the cloud director

Parameter: `routeTableIdPublic`
Type: `string`
Description: Routing table ID for the public subnet

Parameter: `routeTableIdPrivate`
Type: `string`
Description: Routing table ID for private subnets

Parameter: `setDirectorAsDefaultGateway`
Type: `boolean`
Description: If specified, a default route via the director will be created in the private subnet. This is not necessary if the private subnet was already configured and the nodes have access to the head node (e.g. Direct Connect)

Parameter: `useInternalIPForDirectorIP`
Type: `boolean`
Description: If specified, CMDaemon will use cloud director’s internal IP, instead of a public/external IP. Useful when you have existing IP connectivity to your VPC.

Parameter: `enforceDirectorIP`
Type: `IP`
Description: If specified, CMDaemon will assume this is the cloud director’s IP address.

5.2.130 EdgeDirectorRole: DirectorRole
parent: DirectorRole

Parameter: `nodePowerOperations`
Type: `boolean`
Description: Execute all power operations of nodes in the edge site on the director

Parameter: `directorPowerOperations`
Type: `boolean`
Description: Execute all power operation of the director on the director, note that this means it cannot be powered on

Parameter: `nodeSelectionBootRole`
Type: `boolean`
Description: Use the edge site as a node selection mechanism for the boot role

Parameter: `nodeSelectionDnsRole`
Type: `boolean`
Description: Use the edge site as a node selection mechanism for the DNS role

Parameter: `nodeSelectionProvisioningRole`
Type: boolean
Description: Use the edge site as a node selection mechanism for the provisioning role

Parameter: addNamedService
Type: boolean
Description: Add named service to the node

Parameter: addSlapdService
Type: boolean
Description: Add slapd service to the node

Parameter: addNtpdService
Type: boolean
Description: Add ntpd service to the node

Parameter: openTCPPortsOnHeadNode
Type: list of unsigned numbers
Description: The list of TCP ports that will be opened in shorewall on the head node

Parameter: openUDPPortsOnHeadNode
Type: list of unsigned numbers
Description: The list of UDP ports that will be opened in shorewall on the head node

Parameter: externallyVisibleIp
Type: IP
Description: IP that will be seen by other nodes when the director connects

Parameter: externallyVisibleHeadNodeIp
Type: IP
Description: Head node IP that will be use by this director

Parameter: syncCmShared
Type: boolean
Description: Sync /cm/shared if required

5.2.131 EdgeSite: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: contact
Type: list of strings
Description: Names of contacts

Parameter: adminEmail
Type: list of strings
Description: Administrator’s email

Parameter: address
Type: string
Description: Address

Parameter: city
Type: string
Description: City

Parameter: country
Type: string
Description: Country

Parameter: timeZoneSettings
Type: TimeZoneSettings or None
Description: Time zone

Parameter: notes
Type: string
Description: Notes

Parameter: nodes
Type: list of references to ComputeNode
Description: List of nodes in this site

Parameter: switches
Type: list of references to Switch
Description: List of switches in this site

Parameter: genericDevices
Type: list of references to GenericDevice
Description: List of generic devices in this site

Parameter: unmanagedNodes
Type: list of references to UnmanagedNode
Description: List of unmanaged nodes in this site

Parameter: powerDistributionUnits
Type: list of references to PowerDistributionUnit
Description: List of power distribution units in this site

Parameter: fabricDevices
Type: list of references to FabricDevice
Description: List of power distribution units in this site

Parameter: racks
Type: list of references to Rack
Description: List of racks in this site

Parameter: secret
Type: string
Description: Edge site secret

Parameter: metaDataDeviceLabel
Type: string
Description: Meta data device label which to mount in order get the meta data

Parameter: metaDataUrl
Type: string
Description: Meta data URL that contains information for edge directors

Parameter: createISO
Type: enum
Description: Edge site site ISO/script for USB

Parameter: createIMG
Type: enum
Description: Edge site site IMG/script for MMC

Parameter: includeCMSharedOnMedia
Type: boolean
Description: Include /cm/shared on media to reduce the amount of rsync during edge director installation

Parameter: includeImagesOnMedia
Type: boolean
Description: Include images on media to reduce the amount of rsync during edge director installation

Parameter: preStageRequestID
Type: UUID
Description: Pre-staging request ID

Parameter: preStageRequestIDCreationTime
Type: timestamp
Description: Pre-staging request ID creation time

5.2.132 EntityManagersHash: Entity
parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: name
5.2 Entities

Type: list of strings
Description: Name

Parameter: hashes
Type: list of strings
Description: Hashes

5.2.133 EtcdCluster: Entity

parent: Entity

Parameter: name
Type: string
Description: Name of the Etcd cluster

Parameter: heartBeatInterval
Type: unsigned integer
Description: Time (in milliseconds) of a heartbeat interval

Parameter: electionTimeout
Type: unsigned integer
Description: Time (in milliseconds) for an election to timeout

Parameter: notes
Type: string
Description: Notes

Parameter: ca
Type: string
Description: The Certificate Authority (CA) Certificate path for Etcd, used to generate certificates for Etcd.

Parameter: cakey
Type: string
Description: The Certificate Authority (CA) Key path for Etcd, used to generate certificates for Etcd.

Parameter: memberCertificate
Type: string
Description: The Certificate path to use for Etcd cluster members, signed with the Etcd CA.

Parameter: memberCertificateKey
Type: string
Description: The Key path to use for Etcd cluster members, signed with the Etcd CA.

Parameter: clientCertificate
Type: string
Description: The Client Certificate used for Etcdctl for example.

Parameter: clientCertificateKey
Type: string
Description: The Client Certificate Key used for Etcdctl for example.

Parameter: clientCA
Type: string
Description: The Certificate Authority (CA) used for client certificates. When set it is assumed client certificate and key will be generated and signed with this CA by another party. Etcd still expects the path to be correct for the Client Certificate and Key.

Parameter: clientTypeEtcd
Type: unsigned integer
Description: client type in the CLIENT_TYPE_ETCD range

Parameter: moduleFileTemplate
Type: string
Description: Template for system module file

5.2.134 EtcdHostRole: Role

Parameter: memberName
Type: string
Description: Human-readable name for this member ($hostname will be replaced to the node host-name)

Parameter: spool
Type: string
Description: Path to the data directory

Parameter: listenClientUrls
Type: list of strings
Description: List of URLs to listen on for client traffic

Parameter: listenPeerUrls
Type: list of strings
Description: List of URLs to listen on for peer traffic

Parameter: advertiseClientUrls
Type: list of strings
Description: List of this member’s client URLs to advertise to the public

Parameter: advertisePeerUrls
Type: list of strings
Description: List of this member’s peer URLs to advertise to the rest of the cluster

Parameter: snapshotCount
Type: unsigned integer
Description:  Number of committed transactions to trigger a snapshot to disk

Parameter:  maxSnapshots
Type:  unsigned integer
Description:  Maximum number of snapshot files to retain (0 is unlimited)

Parameter:  loglevel
Type:  enum
Description:  Log level, only supports debug, info, warn, error, panic, or fatal.

Parameter:  options
Type:  list of strings
Description:  Additional parameters for etcd daemon

Parameter:  etcdCluster
Type:  reference to EtcdCluster
Description:  The Etcd cluster instance

Parameter:  memberCertificate
Type:  string
Description:  Etcd member certificate, signed with CA specified in the Etcd Cluster. When set it will overrule the value from the EtcdCluster object.

Parameter:  memberCertificateKey
Type:  string
Description:  Etcd member certificate key, signed with CA specified in the Etcd Cluster. When set it will overrule the value from the EtcdCluster object.

5.2.135  ExcludeListSnippet: Entity
parent: Entity

Parameter:  name
Type:  string
Description:  Name

Parameter:  excludeList
Type:  list of strings
Description:  Excluded paths in the node image update

Parameter:  disabled
Type:  boolean
Description:  Disabled

Parameter:  noNewFiles
Type:  boolean
Description:  No new files

Parameter:  modeSync
Type: boolean
Description: Include this snippet when mode is sync

Parameter: modeFull
Type: boolean
Description: Include this snippet when mode is full

Parameter: modeUpdate
Type: boolean
Description: Include this snippet when mode is update

Parameter: modeGrab
Type: boolean
Description: Include this snippet when mode is grab

Parameter: modeGrabNew
Type: boolean
Description: Include this snippet when mode is grab new

5.2.136 ExternalOperationFirmwareInfoResult: ExternalOperationResult
parent: ExternalOperationResult

Parameter: firmwareInfo
Type: list of FirmwareInfo
Description: Firmware info

5.2.137 ExternalOperationJSONResult: ExternalOperationResult
parent: ExternalOperationResult

Parameter: output
Type: free JSON object
Description: Output

Parameter: error
Type: string
Description: Error

5.2.138 ExternalOperationRawResult: ExternalOperationResult
parent: ExternalOperationResult

Parameter: output
Type: string
Description: Output

Parameter: error
Type: string
Description: Error
5.2.139 **ExternalOperationResult**: Entity

**parent**: Entity

**Parameter**: ref_node_uuid

**Type**: UUID

**Description**: Node

**Parameter**: result

**Type**: enum

**Description**: Result

5.2.140 **FabricConfiguration**: Entity

**parent**: Entity

**Parameter**: name

**Type**: string

**Description**: A short name to identify this fabric configuration

**Parameter**: bindMethod

**Type**: enum

**Description**: RedFish REST method to use for sending binding changes

**Parameter**: unbindAllAfterTopologyApply

**Type**: boolean

**Description**: Unbind all after topology apply

**Parameter**: checkNodesDownForApplyTopology

**Type**: boolean

**Description**: Check nodes down for apply topology

**Parameter**: checkResourceBoxesDownForApplyTopology

**Type**: boolean

**Description**: Check resources boxes down for apply topology

**Parameter**: checkNodesDownForApplyBinding

**Type**: boolean

**Description**: Check nodes down for apply binding

**Parameter**: checkResourceBoxesDownForApplyBinding

**Type**: boolean

**Description**: Check resources boxes down for apply binding

**Parameter**: topology

**Type**: FabricConfigurationTopology

**Description**: Configured topology
5.2.141  FabricConfigurationBinding: Entity
parent: Entity

Parameter: ref_topology_zone_uuid
Type: UUID
Description: Topology zone

Parameter: ref_topology_dsp_uuids
Type: list of unsigned numbers
Description: Topology DSPs bound to this zone, host

Parameter: ref_topology_link_uuids
Type: list of unsigned numbers
Description: Topology links bound to this zone, host

5.2.142  FabricConfigurationBindingStatus: Entity
parent: Entity

Parameter: ref_fabric_switch_uuid
Type: UUID
Description: FabricSwitch

Parameter: bindings
Type: list of FabricConfigurationBinding
Description: Bindings

5.2.143  FabricConfigurationFreeBinding: FabricConfigurationBinding
parent: FabricConfigurationBinding

5.2.144  FabricConfigurationHostBinding: FabricConfigurationBinding
parent: FabricConfigurationBinding

Parameter: ref_topology_host_uuid
Type: UUID
Description: Topology host

5.2.145  FabricConfigurationLinkBinding: FabricConfigurationBinding
parent: FabricConfigurationBinding

Parameter: ref_topology_link_uuid
Type: UUID
Description: Topology link

5.2.146  FabricConfigurationTopology: Entity
parent: Entity

Parameter: name
Type: string
Description: Name of the topology
5.2 Entities

Parameter: rawTemplate
Type: free JSON object
Description: Template returned by the switch

Parameter: ref_fabric_switch_uids
Type: list of unsigned numbers
Description: The fabric switches that provide this topology

Parameter: topologyZones
Type: list of FabricConfigurationTopologyZone
Description: Zones

Parameter: topologyDevices
Type: list of FabricConfigurationTopologyDevice
Description: Devices

Parameter: topologyLinks
Type: list of FabricConfigurationTopologyLink
Description: Links

Parameter: topologySwitches
Type: list of FabricConfigurationTopologySwitch
Description: Switches

Parameter: topologyManagementSwitch
Type: FabricConfigurationTopologySwitch
Description: The switch in the topology that will be used for all management operations

Parameter: topologyBindings
Type: list of FabricConfigurationBinding
Description: Fixed topology bindings

5.2.147 FabricConfigurationTopologyDevice: FabricConfigurationTopologyItem
parent: FabricConfigurationTopologyItem

Parameter: switchIndex
Type: unsigned integer
Description: The index of the switch the device is on

Parameter: portIndex
Type: unsigned integer
Description: The port of the switch the device is on

5.2.148 FabricConfigurationTopologyDSP: FabricConfigurationTopologyDevice
parent: FabricConfigurationTopologyDevice

Parameter: fabricResourceBox
Type: reference to FabricResourceBox or None
Description: Host

Parameter: side
Type: enum
Description: Side of the fabricResourceBox

5.2.149 FabricConfigurationTopologyHost: FabricConfigurationTopologyDevice
parent: FabricConfigurationTopologyDevice

Parameter: host
Type: reference to Node or None
Description: Host

Parameter: dynamic
Type: boolean
Description: Add the node as a dynamic host so it can be swapped out without applying the topology

5.2.150 FabricConfigurationTopologyItem: Entity
parent: Entity

Parameter: portsUsed
Type: unsigned integer
Description: The number of port used on the switch

Parameter: lanes
Type: unsigned integer
Description: The number of PCI lanes

5.2.151 FabricConfigurationTopologyLink: FabricConfigurationTopologyItem
parent: FabricConfigurationTopologyItem

Parameter: index
Type: unsigned integer
Description: Index

Parameter: name
Type: string
Description: Alternative name

Parameter: downstreamSwitchIndex
Type: unsigned integer
Description: The index of the switch of the downstream bridge connection

Parameter: downstreamPortIndex
Type: unsigned integer
Description: The port of the switch of the downstream bridge connection

Parameter: upstreamSwitchIndex
Type: unsigned integer
Description: The index of the switch of the upstream bridge connection

Parameter: upstreamPortIndex
Type: unsigned integer
Description: The port of the switch the of the upstream bridge connection

Parameter: type
Type: enum
Description: Type of link this ports connect

5.2.152 FabricConfigurationTopologySwitch: Entity
parent: Entity

Parameter: index
Type: unsigned integer
Description: The index of the zone

Parameter: fabricSwitch
Type: reference to FabricSwitch or None
Description: Switch

5.2.153 FabricConfigurationTopologyZone: Entity
parent: Entity

Parameter: index
Type: unsigned integer
Description: The index of the zone

Parameter: name
Type: string
Description: Name of the zone

5.2.154 FabricDevice: Device
parent: Device

Parameter: ip
Type: IP
Description: Ip address

Parameter: network
Type: reference to Network or None
Description: Network to which this switch is connected

Parameter: userName
Type: string
Description: Username used to send RedFish commands

Parameter: password
Type: string
Description: Password used to send RedFish commands

5.2.155 FabricNodeStatus: Entity
parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: good
Type: boolean
Description: Good

Parameter: info
Type: string
Description: Information

5.2.156 FabricResourceBox: FabricDevice
parent: FabricDevice

5.2.157 FabricResourceBoxDeviceFunctionInformation: Entity
parent: Entity

Parameter: id
Type: string
Description: ID

Parameter: name
Type: string
Description: Name

Parameter: description
Type: string
Description: Description

Parameter: deviceClass
Type: string
Description: Device class

Parameter: deviceId
Type: string
Description: Device ID

Parameter: revisionId
Type: string
Description: Revision ID

Parameter: subSystemId
5.2 Entities

Type: string
Description: Sub system ID

Parameter: subSystemVendorId
Type: string
Description: Sub system vendor ID

Parameter: vendorId
Type: string
Description: Vendor ID

5.2.158 FabricResourceBoxDeviceInformation: Entity

parent: Entity

Parameter: id
Type: string
Description: ID

Parameter: name
Type: string
Description: Name

Parameter: description
Type: string
Description: Description

Parameter: manufacturer
Type: string
Description: Manufacturer

Parameter: serialNumber
Type: string
Description: Serial number

Parameter: firmwareVersion
Type: string
Description: Firmware version

Parameter: slot
Type: string
Description: Slot

Parameter: functions
Type: list of FabricResourceBoxDeviceFunctionInformation
Description: Functions
### 5.2.159 FabricResourceBoxInformation: Entity

**parent:** Entity

- **Parameter:** ref_topology_dsp_uuid  
  **Type:** UUID  
  **Description:** Topology DSP matching this resource/side

- **Parameter:** chassisType  
  **Type:** string  
  **Description:** Chassis type

- **Parameter:** description  
  **Type:** string  
  **Description:** Description

- **Parameter:** manufacturer  
  **Type:** string  
  **Description:** Manufacturer

- **Parameter:** redfishVersion  
  **Type:** string  
  **Description:** Red fish version

- **Parameter:** devices  
  **Type:** list of FabricResourceBoxDeviceInformation  
  **Description:** Devices

### 5.2.160 FabricSwitch: FabricDevice

**parent:** FabricDevice

- **Parameter:** vendor  
  **Type:** string  
  **Description:** Fabric switch vendor

- **Parameter:** ports  
  **Type:** unsigned integer  
  **Description:** Number of ports

- **Parameter:** lanesPerPort  
  **Type:** unsigned integer  
  **Description:** PCI Lanes per port

### 5.2.161 FailoverRole: Role

**parent:** Role

- **Parameter:** syncCmShared  
  **Type:** boolean
Description: Passive head node has a local copy of /cm/shared

5.2.162 FileContent: Entity
parent: Entity

Parameter: filename
Type: string
Description: Filename

Parameter: content
Type: string
Description: Content

Parameter: username
Type: string
Description: Username

Parameter: permissions
Type: integer
Description: Permissions

5.2.163 FileWriterInfo: Entity
parent: Entity

Parameter: ref_device_uuid
Type: UUID
Description: Device

Parameter: path
Type: string
Description: Path

Parameter: timestamp
Type: timestamp
Description: Timestamp on which file was last changed

Parameter: actor
Type: enum
Description: Actor that wrote the file

Parameter: frozen
Type: boolean
Description: Frozen

5.2.164 FirewallInterface: Entity
parent: Entity

Parameter: zone
Type: string
Description: Zone

Parameter: interface
Type: string
Description: Interface

Parameter: broadcast
Type: string
Description: Broadcast

Parameter: options
Type: string
Description: Options

5.2.165 FirewallOpenPort: Entity

parent: Entity

Parameter: action
Type: enum
Description: Specifies the action to be taken if the connection request matches the rule

Parameter: network
Type: string
Description: Network

Parameter: port
Type: unsigned integer
Description: Port

Parameter: protocol
Type: enum
Description: Protocol

Parameter: address
Type: CIDR
Description: Network Address

Parameter: destination
Type: string
Description: Destination hosts to which the rule applies

Parameter: description
Type: string
Description: Description
5.2 Entities

5.2.166 FirewallPolicy: Entity

**parent**: Entity

**Parameter**: source
**Type**: string
**Description**: Source

**Parameter**: dest
**Type**: string
**Description**: Dest

**Parameter**: policy
**Type**: enum
**Description**: Policy

**Parameter**: log
**Type**: string
**Description**: Log

**Parameter**: options
**Type**: string
**Description**: Options

5.2.167 FirewallRole: Role

**parent**: Role

**Parameter**: shorewall
**Type**: boolean
**Description**: Manage shorewall

**Parameter**: openPorts
**Type**: list of FirewallOpenPort
**Description**: The list of ports that will be opened on the node’s firewall

**Parameter**: zones
**Type**: list of FirewallZone
**Description**: The list of extra zones that will be defined in the node’s firewall

**Parameter**: interfaces
**Type**: list of FirewallInterface
**Description**: The list of extra interfaces that will be defined in the node’s firewall

**Parameter**: policies
**Type**: list of FirewallPolicy
**Description**: The list of extra policies that will be defined in the node’s firewall
5.2.168 FirewallZone: Entity
parent: Entity

Parameter: zone
Type: string
Description: Zone

Parameter: zone_type
Type: enum
Description: Type

Parameter: options
Type: string
Description: Options

5.2.169 FirmwareInfo: Entity
parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: filename
Type: string
Description: Filename

Parameter: component
Type: string
Description: Component

Parameter: version
Type: string
Description: Version

Parameter: state
Type: enum
Description: Result

Parameter: progress
Type: float
Description: Progress

Parameter: result
Type: string
Description: Result

Parameter: size
Type: unsigned integer
5.2 Entities

Description: Size
Parameter: date
Type: string
Description: Date

Parameter: timestamp
Type: timestamp
Description: Epoch timestamp, parsed version of date

5.2.170 FPGAInfo: Entity
parent: Entity

Parameter: vendor
Type: string
Description: none

Parameter: bdf
Type: string
Description: none

Parameter: cardType
Type: string
Description: none

Parameter: flashType
Type: string
Description: none

Parameter: dsaRunningFPGA
Type: string
Description: none

Parameter: dsaPackageInstalled
Type: string
Description: none

Parameter: name
Type: string
Description: none

Parameter: rev
Type: string
Description: none

Parameter: serial
Type: string
Description: none

Parameter: configMode
Type: string
Description: none

Parameter: fanPresence
Type: string
Description: none

Parameter: maxPowerLevel
Type: string
Description: none

Parameter: mac0
Type: MAC
Description: none

Parameter: mac1
Type: MAC
Description: none

Parameter: mac2
Type: MAC
Description: none

Parameter: mac3
Type: MAC
Description: none

5.2.171 FSExport: Entity

parent: Entity

Parameter: name
Type: string
Description: Normally the same as the path, useful when exporting a path twice

Parameter: path
Type: string
Description: Path to export

Parameter: network
Type: reference to Network or None
Description: Network the interface is connected to

Parameter: hosts
Type: string
Description: Specify extra hosts-range allowed access to this export (space separated)

Parameter: automatic
Type: boolean
Description: The export was created automatically

Parameter: allowWrite
Type: boolean
Description: Allow writing

Parameter: async
Type: boolean
Description: Allow the NFS server to violate the NFS protocol and reply to requests before any changes made by that request have been committed to stable storage

Parameter: rootSquash
Type: boolean
Description: Map requests from uid/gid 0 to the anonymous uid/gid

Parameter: allSquash
Type: boolean
Description: Map all uids and gids to the anonymous user

Parameter: anonUid
Type: unsigned integer
Description: Anonymous account user id number

Parameter: anonGid
Type: unsigned integer
Description: Anonymous account group id number

Parameter: extraOptions
Type: string
Description: Extra options to be added to this export

Parameter: fsid
Type: unsigned integer
Description: Identification for exports used in failover setup. Make sure these are identical

Parameter: rdma
Type: boolean
Description: Enable NFS over RDMA

Parameter: disabled
Type: boolean
Description: Disable the export
Parameter: checkTree
type: boolean
description: Check tree

5.2.172  FSMount: Entity
parent: Entity

Parameter: device
type: string
description: What to mount.

Parameter: mountpoint
type: string
description: Where to mount.

Parameter: filesystem
type: string
description: The file system type.

Parameter: mountoptions
type: string
description: What options to use for mounting.

Parameter: dump
type: boolean
description: Dump field in fstab, see man fstab.

Parameter: fsck
type: enum
description: Filesystem check field in fstab, see man fstab.

Parameter: rdma
type: boolean
description: Enable NFS over RDMA.

5.2.173  FSPart: Entity
parent: Entity

Parameter: path
type: string
description: Full source path of the filesystem part

Parameter: type
type: enum
description: The type of filesystem part

Parameter: watchDirectories
type: list of strings
Description: Watch directories for changes on the active head node, filesystem part will be marked dirty when changed

Parameter: dirtyAutoSyncDelay
Type: unsigned integer
Description: Time to wait before automatically syncing after the filesystem part became dirty, set 0 to disable

Parameter: autoDirtyDelay
Type: unsigned integer
Description: Time to wait before automatically marking an filesystem part as dirty, set 0 to disable

Parameter: preSyncScript
Type: string
Description: Script to be executed before rsync runs

Parameter: postSyncScript
Type: string
Description: Script to be executed after rsync runs

Parameter: abortOnPreSyncScriptFailure
Type: boolean
Description: Do not rsync if the pre sync script exited with a non zero exit code

Parameter: runPostOnFailure
Type: boolean
Description: Run the post rsync script even if the pre sync or sync ended with a non zero exit code

Parameter: syncScriptTimeout
Type: unsigned integer
Description: Script timeout

Parameter: rsyncAcls
Type: boolean
Description: Rsync with –acls

Parameter: rsyncXattrs
Type: boolean
Description: Rsync with –xattrs

Parameter: rsyncHardlinks
Type: boolean
Description: Rsync with –hard-links

Parameter: rsyncSparse
Type: boolean
Description: Rsync with –sparse

Parameter: rsyncNumericIds
Type: boolean
Description: Rsync with –numeric-ids

Parameter: rsyncForce
Type: boolean
Description: Rsync with –force

Parameter: rsyncPrune
Type: boolean
Description: Rsync with –prune-empty-dirs

Parameter: rsyncDelta
Type: boolean
Description: Rsync with –inplace –no-whole-file

Parameter: rsyncBlockSize
Type: unsigned integer
Description: Rsync with –block-size=<value> Max 128KB, 0 implies rsync default

Parameter: rsyncBandWidthLimit
Type: unsigned integer
Description: Rsync with –bwlimit=<value>

Parameter: rsyncCompress
Type: enum
Description: Rsync with –compress

Parameter: rsyncCompressLevel
Type: enum
Description: Rsync compression at a specific level

Parameter: extraRsyncArguments
Type: list of strings
Description: Extra rsync arguments. These can be made condition based on type=no-new-files | normal and mode=sync | update | full | sync. For example: –max-delete=0?type=normal&mode=update|sync

Parameter: excludeListSnippets
Type: list of ExcludeListSnippet
Description: none

5.2.174 FSPartAssociation: Entity
parent: Entity

Parameter: node
Type: reference to Node
Description: Node this association is associated with.

Parameter: \texttt{syncPoint}  
Type: \texttt{string}  
Description: Directory the FSPart should be synchronized to on the target.

Parameter: \texttt{prefix}  
Type: \texttt{string}  
Description: Optional prefix to the sync point

Parameter: \texttt{fspart}  
Type: reference to \texttt{FSPart}  
Description: FSPart this association is associated with.

Parameter: \texttt{disabled}  
Type: \texttt{boolean}  
Description: Disabled

Parameter: \texttt{enableInHA}  
Type: \texttt{boolean}  
Description: Enable in HA

Parameter: \texttt{onSharedStorage}  
Type: \texttt{boolean}  
Description: FSPart associations on shared storage can be used as provisioning source, but don't need to be kept up-to-date.

Parameter: \texttt{backupDirectory}  
Type: \texttt{string}  
Description: Backup directory

5.2.175 \texttt{FSPartBasicAssociation: FSPartAssociation}  
\texttt{parent: FSPartAssociation}

Parameter: \texttt{isRoot}  
Type: \texttt{boolean}  
Description: Indicates if this association is the root file system for the target. A node can only have one association where this is set.

5.2.176 \texttt{FSPartInfo: Entity}  
\texttt{parent: Entity}

Parameter: \texttt{ref_fspart_uuid}  
Type: \texttt{UUID}  
Description: FSPart

Parameter: \texttt{ref_node_uuid}  
Type: \texttt{UUID}
Description: Node

Parameter: archOSInfo
Type: ArchOSInfo or None
Description: Detected arch/OS

Parameter: size
Type: unsigned integer
Description: Total size

Parameter: inotifyWatcherSize
Type: unsigned integer
Description: Inotify watcher size

5.2.177  FSPartProviderAssociation: FSPartAssociation
parent: FSPartAssociation

Parameter: onlyWhenActive
Type: boolean
Description: Only use provider association if the node is the active head node

5.2.178  FSPartRole: Role
parent: Role

Parameter: fsparts
Type: list of references to FSPart
Description: FSParts

Parameter: fspartSource
Type: boolean
Description: Server as source for all these FSParts

5.2.179  FSxInstance: Entity
parent: Entity

Parameter: fsxId
Type: string
Description: AWS assigned unique identifier

Parameter: name
Type: string
Description: Non-unique identifier

Parameter: owner
Type: string
Description: Owner of the FSx instance

Parameter: sharedWith
Type: list of strings
5.2 Entities

Description: Other cmjob users that can use this instance for jobs.

Parameter: vpcId
Type: string
Description: The VPC in which it exists

Parameter: region
Type: string
Description: The AWS region where the instance was created

Parameter: capacity
Type: unsigned integer
Description: Instance capacity. Should be at least 3600 GiB.

Parameter: status
Type: string
Description: AWS reported status of the instance

Parameter: hostname
Type: string
Description: Hostname of the FSx, is internal to the VPC

Parameter: management
Type: enum
Description: Instance management type

Parameter: creationTime
Type: string
Description: Creation time

5.2.180 GenericDevice: Device

Parent: Device

Parameter: ip
Type: IP
Description: IP address

Parameter: network
Type: reference to Network or None
Description: Network to which this switch is connected

Parameter: model
Type: string
Description: Device model name

Parameter: additionalHostnames
Type: list of strings
Description: List of additional hostnames that should resolve to the interfaces IP address

5.2.181 GenericResource: BasicResource

parent: BasicResource

Parameter: activateScript
Type: string
Description: Script to be executed when the resource is given to a node

Parameter: deactivateScript
Type: string
Description: Script to be executed when the resource is taken away from a node

Parameter: checkScript
Type: string
Description: Script to be executed periodically to verify the resource is still running

Parameter: arguments
Type: list of strings
Description: Arguments to pass to the script

Parameter: scriptTimeout
Type: unsigned integer
Description: Script timeout

5.2.182 GenericRole: Role

parent: Role

Parameter: services
Type: list of strings
Description: Services managed by this role

Parameter: configuration
Type: list of GenericRoleConfiguration
Description: Configurations

Parameter: extraEnvironment
Type: list of GenericRoleEnvironment
Description: Additional environment to be passed to scripts

Parameter: excludeListSnippets
Type: list of ExcludeListSnippet
Description: none

Parameter: dataNode
Type: boolean
Description: If enabled the node will never do a FULL install without explicit user confirmation
5.2.183  **GenericRoleConfiguration: Entity**

**parent:** Entity

Parameter:  name
Type:  string
Description:  Name

Parameter:  createDirectory
Type:  boolean
Description:  Create directory if it doesn’t exist

Parameter:  filename
Type:  string
Description:  Filename

Parameter:  mask
Type:  unsigned integer
Description:  Filenmask directory

Parameter:  userName
Type:  string
Description:  User ownership applied to the file

Parameter:  groupName
Type:  string
Description:  Group ownership applied to the file

Parameter:  disabled
Type:  boolean
Description:  Disabled

Parameter:  serviceActionOnWrite
Type:  enum
Description:  Action performed on service if the file changed

Parameter:  serviceStopOnFailure
Type:  boolean
Description:  Stop services if the file write failed

5.2.184  **GenericRoleEnvironment: Entity**

**parent:** Entity

Parameter:  name
Type:  string
Description:  Name

Parameter:  value
Type:  string
Description: Value

Parameter: nodeEnvironment
Type: boolean
Description: Update the node environment variables

5.2.185 GenericRoleGeneratedConfiguration: GenericRoleConfiguration
parent: GenericRoleConfiguration

Parameter: script
Type: string
Description: Script

Parameter: arguments
Type: list of strings
Description: Arguments

Parameter: timeout
Type: unsigned integer
Description: Timeout

Parameter: watch
Type: boolean
Description: Watch script for for changes, and rerun

5.2.186 GenericRoleStaticConfiguration: GenericRoleConfiguration
parent: GenericRoleConfiguration

Parameter: content
Type: string
Description: Content to write into file

Parameter: filemask
Type: unsigned integer
Description: Filemask

5.2.187 GenericRoleSymlinkConfiguration: GenericRoleConfiguration
parent: GenericRoleConfiguration

Parameter: sourceFilename
Type: string
Description: Source filename

Parameter: watch
Type: boolean
Description: Watch source file for for changes, and treat as file change
5.2 Entities

5.2.188 GenericRoleTemplatedConfiguration: GenericRoleConfiguration
parent: GenericRoleConfiguration

Parameter: templateContent
Type: string
Description: Template to use for writing file

5.2.189 GNSSLocation: Entity
parent: Entity

Parameter: ref_entity_uuid
Type: UUID
Description: Entity

Parameter: timestamp
Type: float
Description: none

Parameter: latitude
Type: float
Description: none

Parameter: longitude
Type: float
Description: none

Parameter: height
Type: float
Description: none

Parameter: message
Type: string
Description: none

5.2.190 GPUInfo: Entity
parent: Entity

Parameter: name
Type: string
Description: none

Parameter: brand
Type: string
Description: none

Parameter: index
Type: unsigned integer
Description:  none

Parameter:  pciBusId
Type:  string
Description:  none

Parameter:  pciDevId
Type:  unsigned integer
Description:  none

Parameter:  pciSubSysId
Type:  unsigned integer
Description:  none

Parameter:  serial
Type:  string
Description:  none

Parameter:  vBios
Type:  string
Description:  none

Parameter:  driver
Type:  string
Description:  none

Parameter:  powerLimit
Type:  unsigned integer
Description:  none

Parameter:  nvlinkUp
Type:  unsigned integer
Description:  none

Parameter:  nvlinkDown
Type:  unsigned integer
Description:  none

Parameter:  nvlinkSpeed
Type:  unsigned integer
Description:  none

5.2.191  GPUProfilingMetricInfo: Entity
parent:  Entity

Parameter:  ref_node_uuid
Type:  UUID
5.2 Entities

Description: Node

Parameter: gpu
Type: unsigned integer
Description: GPU index

Parameter: majorId
Type: unsigned integer
Description: Major ID

Parameter: minorId
Type: unsigned integer
Description: Minor ID

Parameter: fieldId
Type: unsigned integer
Description: Field ID

Parameter: metric
Type: string
Description: Metric

Parameter: enabled
Type: boolean
Description: Enabled

5.2.192 GPUSettings: Entity
parent: Entity

Parameter: name
Type: string
Description: Range of GPUs for which these settings apply

5.2.193 GpuStatusEntry: Entity
parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: index
Type: unsigned integer
Description: GPU index for this status entry

Parameter: gpu
Type: string
Description: Name of the GPU
### Parameter: property
**Type:** string  
**Description:** Property name

### Parameter: value
**Type:** string  
**Description:** Value of the property

### Parameter: supported
**Type:** list of strings  
**Description:** List of supported values for this property

#### 5.2.194 GridEngineJob: Job
**parent:** Job

#### 5.2.195 GridEngineJobQueue: JobQueue
**parent:** JobQueue

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>tmpdir</td>
<td>string</td>
<td>Temporary directory for queue</td>
</tr>
<tr>
<td>prolog</td>
<td>string</td>
<td>Path to prolog script (e.g. root@/cm/local/apps/cmd/scripts/prolog)</td>
</tr>
<tr>
<td>epilog</td>
<td>string</td>
<td>Path to epilog script</td>
</tr>
<tr>
<td>starterMethod</td>
<td>string</td>
<td>Script to be executed instead of shell to run the job</td>
</tr>
<tr>
<td>suspendMethod</td>
<td>string</td>
<td>Grid Engine Suspend method</td>
</tr>
<tr>
<td>resumeMethod</td>
<td>string</td>
<td>Grid Engine Resume method</td>
</tr>
<tr>
<td>terminateMethod</td>
<td>string</td>
<td>Grid Engine Terminate method</td>
</tr>
<tr>
<td>minWalltime</td>
<td>string</td>
<td></td>
</tr>
</tbody>
</table>
### 5.2 Entities

**Description:** Minimum runtime for jobs in queue

**Parameter:** maxWalltime
**Type:** string
**Description:** Maximum runtime for jobs in queue

#### 5.2.196 GridEngineJobQueueStat: JobQueueStat

**parent:** JobQueueStat

**Parameter:** load
**Type:** float
**Description:** Queue queue load

**Parameter:** used
**Type:** unsigned integer
**Description:** Used queue slots

**Parameter:** available
**Type:** unsigned integer
**Description:** Available queue slots

**Parameter:** total
**Type:** unsigned integer
**Description:** Total queue slots

**Parameter:** resv
**Type:** unsigned integer
**Description:** Reserved queue slots

#### 5.2.197 GridEngineParallelEnvironment: Entity

**parent:** Entity

**Parameter:** name
**Type:** string
**Description:** The name of the parallel environment (to be used in the qsub -pe switch)

**Parameter:** slots
**Type:** unsigned integer
**Description:** The number of parallel processes being allowed to run in total under the PE concurrently

**Parameter:** userLists
**Type:** list of strings
**Description:** A list of user access list names

**Parameter:** xUserLists
**Type:** list of strings
**Description:** An exclude list of user access list names
Parameter: startProcedureArguments
Type: string
Description: The invocation command line of a start-up procedure

Parameter: stopProcedureArguments
Type: string
Description: The invocation command line of a shutdown procedure

Parameter: allocationRule
Type: string
Description: The allocation rule helps the scheduler to decide how to distribute parallel processes

Parameter: controlSlaves
Type: boolean
Description: Indicates if GE is the creator of the slave tasks via sge_execd and sge_shepherd

Parameter: jobIsFirstTask
Type: boolean
Description: A value of true indicates that the GE job script already contains one of the tasks

Parameter: urgencySlots
Type: string
Description: Specifies the method to be used by GE to assess the number of slots such jobs might finally get

Parameter: accountingSummary
Type: boolean
Description: Indicates if only a single accounting record (job summary) is written to the accounting file

Parameter: perPeTaskProlog
Type: string
Description: Prolog script that is started for each slave task

Parameter: perPeTaskEpilog
Type: string
Description: Epilog script that is started for each slave task

5.2.198 Group: Entity
parent: Entity

Parameter: ID
Type: string
Description: Group ID

Parameter: name
Type: string
Description: Group name
5.2 Entities

Parameter: members
Type: list of strings
Description: Users belonging to this group

5.2.199 GuiCephOsdpoolInfo: Entity

parent: Entity

Parameter: ref_ceph_osdpool_uuid
Type: UUID
Description: CephOSDPool

Parameter: name
Type: string
Description: Name

Parameter: sizeBytes
Type: unsigned integer
Description: size_bytes

Parameter: numObjects
Type: unsigned integer
Description: num_objects

Parameter: numObjectClones
Type: unsigned integer
Description: num_object_clones

Parameter: numObjectCopies
Type: unsigned integer
Description: num_object_copies

Parameter: numObjectsMissingOnPrimary
Type: unsigned integer
Description: num_objects_missing_on_primary

Parameter: numObjectsDegraded
Type: unsigned integer
Description: num_objects_degraded

Parameter: numObjectsUnfound
Type: unsigned integer
Description: num_objects_unfound

Parameter: readOps
Type: unsigned integer
Description: Number of reads

Parameter: readBytes
Type: unsigned integer
Description: Total read

Parameter: writeOps
Type: unsigned integer
Description: Number of writes

Parameter: writeBytes
Type: unsigned integer
Description: Total write

5.2.200 GuiCephOverview: Entity
parent: Entity

Parameter: refCeph_uuid
Type: UUID
Description: Ceph

Parameter: status
Type: string
Description: Status

Parameter: numPgs
Type: unsigned integer
Description: Number of placement groups

Parameter: numMons
Type: unsigned integer
Description: Number of monitors

Parameter: numOsds
Type: unsigned integer
Description: Total

Parameter: numUpOsds
Type: unsigned integer
Description: Up

Parameter: numInOsds
Type: unsigned integer
Description: In

Parameter: pgsBytesTotal
Type: unsigned integer
Description: PGS Bytes Total

Parameter: pgsBytesUsed
Type: unsigned integer
5.2 Entities

Description: PGS Bytes Used

Parameter: `pgsBytesAvail`
Type: unsigned integer
Description: PGS Bytes Avail

Parameter: `pgsDataBytes`
Type: unsigned integer
Description: Amount of actual data in placement groups

Parameter: `pgsReadBytesSec`
Type: unsigned integer
Description: Bytes read per second for placement groups

Parameter: `pgsWriteBytesSec`
Type: unsigned integer
Description: Bytes written per second for placement groups

Parameter: `pgs`
Type: list of GuiCephPgsInfo
Description: PGS

Parameter: `osdPools`
Type: list of GuiCephOsdPoolInfo
Description: Ceph OSD Pool Information

5.2.201 GuiCephPgsInfo: Entity
parent: Entity

Parameter: `stateName`
Type: string
Description: State name

Parameter: `version`
Type: string
Description: Version

Parameter: `numPgs`
Type: unsigned integer
Description: Num Pgs

Parameter: `dataBytes`
Type: unsigned integer
Description: Data Bytes

Parameter: `usedBytes`
Type: unsigned integer
Description: Used Bytes

Parameter: availBytes
Type: unsigned integer
Description: Avail Bytes

Parameter: totalBytes
Type: unsigned integer
Description: Total Bytes

5.2.202 GuiClusterOverview: Entity
parent: Entity

Parameter: ref_partition_uuid
Type: UUID
Description: Partition

Parameter: uptime
Type: unsigned integer
Description: Uptime of the active head node

Parameter: nodesUp
Type: unsigned integer
Description: Number of nodes that are listed as up

Parameter: nodesDown
Type: unsigned integer
Description: Number of nodes that are listed as down

Parameter: nodesClosed
Type: unsigned integer
Description: Number of nodes that are listed as closed

Parameter: nodesTotal
Type: unsigned integer
Description: Number of nodes

Parameter: liteNodesUp
Type: unsigned integer
Description: Number of lite nodes that are listed as up

Parameter: liteNodesDown
Type: unsigned integer
Description: Number of lite nodes that are listed as down

Parameter: liteNodesClosed
Type: unsigned integer
5.2 Entities

Description: Number of lite nodes that are listed as closed

Parameter: liteNodesTotal
Type: unsigned integer
Description: Number of lite nodes

Parameter: dpuNodesUp
Type: unsigned integer
Description: Number of DPU nodes that are listed as up

Parameter: dpuNodesDown
Type: unsigned integer
Description: Number of DPU nodes that are listed as down

Parameter: dpuNodesClosed
Type: unsigned integer
Description: Number of DPU nodes that are listed as closed

Parameter: dpuNodesTotal
Type: unsigned integer
Description: Number of DPU nodes

Parameter: unmanagedNodesUp
Type: unsigned integer
Description: Number of unmanaged nodes that are listed as up

Parameter: unmanagedNodesDown
Type: unsigned integer
Description: Number of unmanaged nodes that are listed as down

Parameter: unmanagedNodesClosed
Type: unsigned integer
Description: Number of unmanaged nodes that are listed as closed

Parameter: unmanagedNodesTotal
Type: unsigned integer
Description: Number of unmanaged nodes

Parameter: managedSwitchesUp
Type: unsigned integer
Description: Number of managed switches that are listed as up

Parameter: managedSwitchesDown
Type: unsigned integer
Description: Number of managed switches that are listed as down

Parameter: managedSwitchesClosed
Type: unsigned integer
Description: Number of managed switches that are listed as closed

Parameter: managedSwitchesTotal
Type: unsigned integer
Description: Number of managed switches

Parameter: devicesUp
Type: unsigned integer
Description: Number of non-node devices that are listed as up

Parameter: devicesDown
Type: unsigned integer
Description: Number of non-node devices that are listed as down

Parameter: devicesClosed
Type: unsigned integer
Description: Number of non-node devices that are listed as closed

Parameter: devicesTotal
Type: unsigned integer
Description: Number of non-node devices

Parameter: coresUp
Type: unsigned integer
Description: Sum of all cores for nodes which are up

Parameter: coresTotal
Type: unsigned integer
Description: Sum of all cores for nodes which are up at one time

Parameter: gpusUp
Type: unsigned integer
Description: Sum of all GPUs for nodes which are up

Parameter: gpusTotal
Type: unsigned integer
Description: Sum of all GPUs for nodes which are up at one time

Parameter: fpgasUp
Type: unsigned integer
Description: Sum of all FPGAs for nodes which are up

Parameter: fpgasTotal
Type: unsigned integer
Description: Sum of all FPGAs for nodes which are up at one time
5.2 Entities

Parameter: disks
Type: list of GuiDiskUsage
Description: Number of disks

Parameter: workload
Type: list of GuiWorkload
Description: Workload information

Parameter: usersLoggedIn
Type: unsigned integer
Description: Number of logged in users on the active head node

Parameter: usersLoggedOut
Type: unsigned integer
Description: Number of logged out users on the active head node

Parameter: usersTotal
Type: unsigned integer
Description: Number of users known to the active head node

Parameter: memoryUsed
Type: unsigned integer
Description: Sum of used memory over all nodes

Parameter: memoryUnused
Type: unsigned integer
Description: Sum of unused memory over all nodes

Parameter: memoryTotal
Type: unsigned integer
Description: Sum of total memory over all nodes

Parameter: swapUsed
Type: unsigned integer
Description: Sum of used swap memory over all nodes

Parameter: swapUnused
Type: unsigned integer
Description: Sum of unused swap memory over all nodes

Parameter: swapTotal
Type: unsigned integer
Description: Sum of total swap over all nodes

Parameter: usageUser
Type: float
Description: Average user cpu usage over all nodes

Parameter: usageSystem
Type: float
Description: Average system cpu usage over all nodes

Parameter: usageIdle
Type: float
Description: Average idle cpu usage over all nodes

Parameter: usageOther
Type: float
Description: Percentage of cpu time spend on other operations

Parameter: phaseLoad
Type: float
Description: Phase load across all APCs

Parameter: occupationRate
Type: float
Description: Formula: Average{allnodes} (min(load, cores) / cores)

Parameter: freeRate
Type: float
Description: Formula: 1 - Average{allnodes} (min(load, cores) / cores)

5.2.203 GuiDiskUsage: Entity

parent: Entity

Parameter: ref_device_uuid
Type: UUID
Description: Device

Parameter: mountpoint
Type: string
Description: Mountpoint

Parameter: used
Type: unsigned integer
Description: Bytes in use on this device

Parameter: free
Type: unsigned integer
Description: Bytes free on this device
5.2.204  GuiFabricConfigurationPortmap: Entity

description: Entity

parent: Entity

Parameter: ref_fabric_configuration_uuid
Type: UUID
Description: FabricConfiguration

Parameter: state
Type: enum
Description: State

Parameter: name
Type: string
Description: Name

Parameter: switches
Type: list of GuiFabricSwitchOverview
Description: Switches

5.2.205  GuiFabricSwitchLed: Entity

description: Entity

parent: Entity

Parameter: port
Type: unsigned integer
Description: Port

Parameter: partition
Type: unsigned integer
Description: Partition

Parameter: neighbor
Type: unsigned integer
Description: Neighbor

Parameter: cableId
Type: string
Description: Cable ID

Parameter: linkUp
Type: boolean
Description: Link up

Parameter: present
Type: boolean
Description: Present

Parameter: leftColor
Type: enum
Description: Left side color

Parameter: leftBlink
Type: boolean
Description: Left side blinking led

Parameter: rightColor
Type: enum
Description: Left side color

Parameter: rightBlink
Type: boolean
Description: Left side blinking led

Parameter: direction
Type: enum
Description: Direction

Parameter: maxWidth
Type: unsigned integer
Description: Maximal width

Parameter: negotiatedWidth
Type: unsigned integer
Description: Negotiated width

Parameter: rate
Type: string
Description: Rate

5.2.206 GuiFabricSwitchOverview: Entity
parent: Entity

Parameter: ref_fabric_switch_uuid
Type: UUID
Description: FabricSwitch

Parameter: state
Type: enum
Description: State

Parameter: guid
Type: string
Description: GUID

Parameter: leds
Type: list of GuiFabricSwitchLed
5.2 Entities

Description: Leds

Parameter: ports
Type: list of GuiFabricSwitchPort
Description: Ports

5.2.207 GuiFabricSwitchPort: Entity
parent: Entity

Parameter: ports
Type: list of unsigned numbers
Description: Ports

Parameter: maxSpeed
Type: unsigned integer
Description: Maximal speed

Parameter: negotiatedSpeed
Type: unsigned integer
Description: Negotiated speed

Parameter: partition
Type: unsigned integer
Description: Partition

Parameter: status
Type: enum
Description: Status

Parameter: direction
Type: enum
Description: Direction

Parameter: ltssm
Type: enum
Description: Link Training and Status State Machine

Parameter: rate
Type: unsigned integer
Description: Rate

Parameter: configuredRate
Type: unsigned integer
Description: Configured rate
5.2.208 GuiGPU: Entity

parent: Entity

Parameter: ref_device_uuid
Type: UUID
Description: Device

Parameter: name
Type: string
Description: Name

Parameter: memoryUsed
Type: unsigned integer
Description: Memory used

Parameter: memoryFree
Type: unsigned integer
Description: Memory free

Parameter: utilization
Type: float
Description: GPU Utilization

Parameter: powerUsage
Type: float
Description: Power usage

Parameter: temperature
Type: float
Description: Temperature

Parameter: smClock
Type: float
Description: Streaming multiprocessor clock speed

Parameter: memoryClock
Type: float
Description: Memory clock speed

5.2.209 GuiJob: Entity

parent: Entity

Parameter: ref_wlm_cluster_uuid
Type: UUID
Description: WlmCluster

Parameter: ref_jobqueue_uuid
Type: UUID
Description: JobQueue
5.2 Entities

Description: Queue

Parameter: jobID
Type: string
Description: Job ID

Parameter: name
Type: string
Description: Name

Parameter: user
Type: string
Description: User

Parameter: runtime
Type: unsigned integer
Description: Runtime

5.2.210 GuiKubeClusterOverview: Entity

parent: Entity

Parameter: ref_kube_cluster_uuid
Type: UUID
Description: KubeCluster

Parameter: name
Type: string
Description: Cluster Name

Parameter: version
Type: string
Description: Kubernetes Version

Parameter: notes
Type: string
Description: Notes

Parameter: numNodes
Type: unsigned integer
Description: Number of nodes

Parameter: numNamespaces
Type: unsigned integer
Description: Number of namespaces

Parameter: numServices
Type: unsigned integer

Type: unsigned integer
Description: Number of services

Parameter: numRcs
Type: unsigned integer
Description: Number of replication controllers

Parameter: numPvs
Type: unsigned integer
Description: Number of persistent volumes

Parameter: numPvcs
Type: unsigned integer
Description: Number of persistent volumes claims

Parameter: jobs
Type: list of JobInfo
Description: Jobs

Parameter: pods
Type: list of KubePodInfo
Description: Pods

5.2.211 GuiNetworkInterface: Entity
parent: Entity

Parameter: name
Type: string
Description: Interface name

Parameter: rx
Type: unsigned integer
Description: Number of bytes received since startup

Parameter: tx
Type: unsigned integer
Description: Number of bytes transmitted since startup

5.2.212 GuiNodeOverview: Entity
parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: interfaces
Type: list of GuiNetworkInterface
Description: Detailed interface information
5.2 Entities

Parameter: disks
Type: list of GuiDiskUsage
Description: Detailed disk information

Parameter: jobs
Type: list of GuiJob
Description: Detailed job information

Parameter: gpus
Type: list of GuiGPU
Description: Detailed GPU information

Parameter: load1
Type: float
Description: Average system load over the last minute

Parameter: load5
Type: float
Description: Average system load over the last five minutes

Parameter: load15
Type: float
Description: Average system load over the last fifteen minutes

Parameter: uptime
Type: unsigned integer
Description: Uptime

Parameter: memoryUsed
Type: unsigned integer
Description: Memory used

Parameter: memoryUnused
Type: unsigned integer
Description: Memory unused

Parameter: memoryTotal
Type: unsigned integer
Description: Total memory

Parameter: swapUsed
Type: unsigned integer
Description: Swap memory used

Parameter: swapUnused
Type: unsigned integer
Description: Swap memory unused

Parameter: `swapTotal`
Type: unsigned integer
Description: Total swap memory

Parameter: `wlmSlotsUsed`
Type: unsigned integer
Description: WLM slots used

Parameter: `wlmSlotsUnused`
Type: unsigned integer
Description: WLM slots unused

Parameter: `wlmSlotsTotal`
Type: unsigned integer
Description: Total WLM slots

Parameter: `usageUser`
Type: float
Description: Percentage of cpu time spend on user processes

Parameter: `usageSystem`
Type: float
Description: Percentage of cpu time spend on system processes

Parameter: `usageIdle`
Type: float
Description: Percentage of cpu time spend in idle

Parameter: `usageOther`
Type: float
Description: Percentage of cpu time spend in non user/system/idle

Parameter: `usageSoftIrq`
Type: float
Description: Percentage of cpu time spend in soft irq

Parameter: `usageIrq`
Type: float
Description: Percentage of cpu time spend in irq

Parameter: `usageNice`
Type: float
Description: Percentage of cpu time spend in nice

Parameter: `usageSteal`
5.2 Entities

Type: float
Description: Percentage of cpu time spend in steal

Parameter: usageGuest
Type: float
Description: Percentage of cpu time spend in guest

Parameter: usageWait
Type: float
Description: Percentage of cpu time spend in wait

5.2.213 GuiNodeStatus: Entity

parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: status
Type: DeviceStatus
Description: Device status

Parameter: load1
Type: float
Description: Average system load over the last minute

Parameter: load5
Type: float
Description: Average system load over the last five minutes

Parameter: load15
Type: float
Description: Average system load over the last fifteen minutes

Parameter: uptime
Type: unsigned integer
Description: Uptime

Parameter: memoryUsed
Type: unsigned integer
Description: Memory used

Parameter: swapUsed
Type: unsigned integer
Description: Swap memory used

Parameter: wlmSlotsUsed
Type: unsigned integer
Description: WLM slots used

Parameter: usageUser
Type: float
Description: Percentage of cpu time spend on user processes

Parameter: usageSystem
Type: float
Description: Percentage of cpu time spend on system processes

Parameter: usageIdle
Type: float
Description: Percentage of cpu time spend in idle

5.2.214 GuiPDUBank: Entity
parent: Entity

Parameter: bank
Type: unsigned integer
Description: Bank

Parameter: load
Type: float
Description: Load

5.2.215 GuiPDUOutlet: Entity
parent: Entity

Parameter: outlet
Type: unsigned integer
Description: Outlet

Parameter: status
Type: enum
Description: Status

Parameter: ref_assigned_devices_uuuids
Type: list of unsigned numbers
Description: Assigned

5.2.216 GuiPDUOverview: Entity
parent: Entity

Parameter: ref_powerdistributionunit_uuid
Type: UUID
Description: none

Parameter: model
Type: string
5.2 Entities

Description:  

Parameter: outlets
Type: list of GuiPDUOutlet
Description:  

Parameter: banks
Type: list of GuiPDUBank
Description:  

5.2.217 GuiSwitchOverview: Entity
parent: Entity

Parameter: ref_switch_uuid
Type: UUID
Description: Switch

Parameter: model
Type: string
Description: Model

Parameter: ports
Type: list of GuiSwitchPort
Description: Ports

Parameter: info
Type: free JSON object
Description: Additional information

5.2.218 GuiSwitchPort: Entity
parent: Entity

Parameter: prt
Type: unsigned integer
Description: Port

Parameter: name
Type: string
Description: Name

Parameter: status
Type: string
Description: Status

Parameter: uplink
Type: boolean
Description: Uplink
Parameter: assigned
Type: UUID
Description: The device assigned to this port

Parameter: detected
Type: string
Description: MAC addresses or hosts detected on this port

Parameter: speed
Type: unsigned integer
Description: Speed

### 5.2.219 GuiWorkload: Entity

parent: Entity

Parameter: name
Type: string
Description: Queue name

Parameter: scheduler
Type: string
Description: Scheduler

Parameter: slots
Type: string
Description: Slots

Parameter: ref_node_uuids
Type: list of unsigned numbers
Description: Node

Parameter: nodes
Type: string
Description: Nodes

Parameter: running
Type: unsigned integer
Description: Number of running jobs in this queue

Parameter: queued
Type: unsigned integer
Description: Number of pending jobs in this queue

Parameter: error
Type: unsigned integer
Description: Number of jobs ended in an error state

Parameter: completed
5.2 Entities

Type: unsigned integer
Description: Number of completed jobs

Parameter: averageDuration
Type: float
Description: Average duration of jobs

Parameter: estimatedDelay
Type: float
Description: Estimated delay for a new job to start

5.2.220 HeadNode: Node
parent: Node

5.2.221 HeadNodeRole: Role
parent: Role

Parameter: failoverId
Type: unsigned integer
Description: none

Parameter: disableAutomaticExports
Type: boolean
Description: Disable creation of automatic filesystem exports

5.2.222 IPCPerm: Entity
parent: Entity

Parameter: key
Type: integer
Description: Message queue ID

Parameter: mode
Type: unsigned integer
Description: Access permissions

Parameter: uid
Type: integer
Description: Owner ID

Parameter: gid
Type: integer
Description: Owner group ID

Parameter: owner
Type: string
Description: Owner
Parameter: group
Type: string
Description: Group name

5.2.223  IPResource: BasicResource
parent: BasicResource

Parameter: ip
Type: IP
Description: IP

Parameter: networkDeviceName
Type: string
Description: The network device name to start this IP on. Leave blank to automatically determine based on IP.

Parameter: alias
Type: string
Description: The network device name alias

Parameter: timeout
Type: unsigned integer
Description: Timeout

5.2.224  Job: Entity
parent: Entity

Parameter: ref_wlm_cluster_uuid
Type: UUID
Description: WlmCluster

Parameter: ref_jobqueue_uuid
Type: UUID
Description: Queue name

Parameter: jobID
Type: string
Description: Job identifier

Parameter: arrayID
Type: string
Description: Job array identifier

Parameter: taskID
Type: string
Description: Job array task identifier(s)

Parameter: accountingInfo
5.2 Entities

Type: free JSON object
Description: Accounting info

Parameter: jobname
Type: string
Description: Name of job

Parameter: username
Type: string
Description: Job owner name

Parameter: status
Type: string
Description: Current job status

Parameter: project
Type: string
Description: Project name

Parameter: priority
Type: string
Description: Job priority

Parameter: inqueue
Type: string
Description: Shows whether job has already been queued or not

Parameter: nodes
Type: list of strings
Description: Requested nodes

Parameter: cgroup
Type: string
Description: CGroup allocated for this job on all nodes

Parameter: rundirectory
Type: string
Description: Job work directory

Parameter: executable
Type: string
Description: File which is executed inside job script

Parameter: arguments
Type: string
Description: Arguments of executable file
Parameter: stdinfile
Type: string
Description: Standard input file

Parameter: stdoutfile
Type: string
Description: Standard output file

Parameter: stderrfile
Type: string
Description: Standard error file

Parameter: submittime
Type: string
Description: Job submission time

Parameter: starttime
Type: string
Description: Job start time (available when job is started)

Parameter: endtime
Type: string
Description: Job end time (available when job is finished or canceled)

Parameter: mailOptions
Type: string
Description: Mail options

Parameter: mailList
Type: string
Description: Mail addresses

Parameter: mailNotify
Type: boolean
Description: Shows whether mail notification is requested or not

Parameter: maxWallClock
Type: string
Description: Maximum available running time

Parameter: runWallClock
Type: unsigned integer
Description: Running time

Parameter: numberOfProcesses
Type: unsigned integer
Description: Number of processes

Parameter: memoryUse
Type: unsigned integer
Description: Memory usage

Parameter: scriptFile
Type: string
Description: Job script file

Parameter: numberOfNodes
Type: unsigned integer
Description: Number of nodes

Parameter: usergroup
Type: string
Description: Job user group

Parameter: commandLineInterpreter
Type: string
Description: Command line interpreter

Parameter: dependencies
Type: list of strings
Description: Job dependencies

Parameter: parallelEnvironment
Type: string
Description: Parallel environment

Parameter: account
Type: string
Description: Account name

Parameter: resourceList
Type: list of strings
Description: List of requested resources

Parameter: modules
Type: list of strings
Description: Environment modules loaded for the script

Parameter: environmentVariables
Type: list of strings
Description: Additional environment variables

Parameter: debug
Type: boolean
Description: Debug mode (used when new job is submitted via CMDaemon API)

Parameter: userdefined
Type: list of strings
Description: User defined parameters

Parameter: exitCode
Type: integer
Description: Exit code of job

Parameter: minMemPerNode
Type: unsigned integer
Description: Minimum memory per node requested

Parameter: comment
Type: string
Description: Comment set by workload manager

Parameter: placement
Type: string
Description: Jobs are placed on nodes according to their place statements (useful for PBS, see ‘man pbs_resources’)

Parameter: pendingReasons
Type: list of strings
Description: List of pending reasons

Parameter: requestedCPUs
Type: unsigned integer
Description: Requested CPUs

Parameter: requestedCPUCores
Type: unsigned integer
Description: Requested CPU cores

Parameter: requestedGPUs
Type: unsigned integer
Description: Requested GPUs per node

Parameter: requestedMemory
Type: unsigned integer
Description: Requested memory per node

Parameter: requestedSlots
Type: unsigned integer
5.2 Entities

Description: Requested slots

Parameter: ref_extra_jobqueue_uuids
Type: list of unsigned numbers
Description: Extra queues

5.2.225 JobInfo: Entity

parent: Entity

Parameter: ref_wlm_cluster_uuid
Type: UUID
Description: WlmCluster

Parameter: ref_jobqueue_uuid
Type: UUID
Description: Queue

Parameter: jobId
Type: string
Description: Job ID

Parameter: jobName
Type: string
Description: Job name

Parameter: user
Type: string
Description: User name

Parameter: group
Type: string
Description: User group name

Parameter: account
Type: string
Description: Job account

Parameter: accountingInfo
Type: free JSON object
Description: Accounting info

Parameter: nodes
Type: list of unsigned numbers
Description: List of job’s nodes

Parameter: ref_node_monitoring_uuids
Type: list of unsigned numbers
Description: Reference to all nodes monitoring UUIDs

Parameter: cgroup
Type: string
Description: Relative cgroup path

Parameter: submitTime
Type: timestamp
Description: Job submit time

Parameter: startTime
Type: timestamp
Description: Job start time

Parameter: endTime
Type: timestamp
Description: Job end time

Parameter: persistent
Type: boolean
Description: Whether job is persistent in DB or not

Parameter: exitCode
Type: integer
Description: Jobscript exit code

Parameter: state
Type: string
Description: Job status

Parameter: requestedCPUs
Type: unsigned integer
Description: Requested CPUs

Parameter: requestedCPUCores
Type: unsigned integer
Description: Requested CPU cores

Parameter: requestedGPUs
Type: unsigned integer
Description: Requested GPU per node

Parameter: requestedMemory
Type: unsigned integer
Description: Requested memory per node

Parameter: requestedSlots
5.2 Entities

Type: unsigned integer
Description: Requested slots

Parameter: monitoring
Type: boolean
Description: Whether job still has monitoring data

Parameter: comment
Type: string
Description: Comment

Parameter: rundirectory
Type: string
Description: Job work directory

Parameter: stdinfile
Type: string
Description: Standard input file

Parameter: stdoutfile
Type: string
Description: Standard output file

Parameter: stderrfile
Type: string
Description: Standard error file

5.2.226 JobInfoStatistics: Entity

Parameter: ref_wlm_cluster_uuid
Type: UUID
Description: WlmCluster

Parameter: ref_jobqueue_uuid
Type: UUID
Description: Queue

Parameter: user
Type: string
Description: none

Parameter: group
Type: string
Description: none

Parameter: account
Type: string
Description: none

Parameter: accountingInfo
Type: free JSON object
Description: none

Parameter: intervalStart
Type: timestamp
Description: none

Parameter: intervalEnd
Type: timestamp
Description: none

Parameter: pending
Type: unsigned integer
Description: none

Parameter: running
Type: unsigned integer
Description: none

Parameter: finished
Type: unsigned integer
Description: none

Parameter: error
Type: unsigned integer
Description: none

Parameter: total
Type: unsigned integer
Description: none

Parameter: pendingTime
Type: unsigned integer
Description: none

Parameter: runningTime
Type: unsigned integer
Description: none

Parameter: finishedTime
Type: unsigned integer
Description: none

Parameter: errorTime
5.2 Entities

Type: unsigned integer
Description: none

Parameter: nodes
Type: unsigned integer
Description: none

Parameter: maxRunning
Type: unsigned integer
Description: none

5.2.227 JobQueue: Entity
parent: Entity

Parameter: name
Type: string
Description: Name of queue

Parameter: wlmCluster
Type: reference to WlmCluster
Description: WlmCluster to which this node belongs

Parameter: options
Type: list of strings
Description: Additional parameters that will be passed to the WLM queue configuration

5.2.228 JobQueuePlaceholder: Entity
parent: Entity

Parameter: queue
Type: string
Description: Name of queue

Parameter: baseNodeName
Type: string
Description: Placeholder node base name

Parameter: maxNodes
Type: unsigned integer
Description: Maximum number of nodes in queue

Parameter: templateNode
Type: reference to Node
Description: Node that will be used as a placeholder

5.2.229 JobQueueStat: Entity
parent: Entity

Parameter: name
Type: string
Description: Queue name

Parameter: running
Type: unsigned integer
Description: Running jobs

Parameter: queued
Type: unsigned integer
Description: Queued jobs

Parameter: maxRunning
Type: unsigned integer
Description: Maximum number of jobs that can run simultaneously

5.2.230 JupyterHubConfig: Entity
parent: Entity

Parameter: key
Type: string
Description: Configuration key

Parameter: value
Type: string
Description: The value for the given configuration key, needs to be literal (include quotes for strings)

5.2.231 JupyterHubRole: Role
parent: Role

Parameter: version
Type: string
Description: JupyterHub version

Parameter: port
Type: unsigned integer
Description: Port for proxy (JupyterHub.port)

Parameter: hubPort
Type: unsigned integer
Description: Port for hub (JupyterHub.hub_port)

Parameter: hubIp
Type: string
Description: The ip address or hostname for the Hub process to bind to (JupyterHub.hub_ip)

Parameter: proxyApiUrl
Type: string
5.2 Entities

Description: The URL which the hub uses to connect to the proxy’s API (c.ConfigurableHTTPProxy.api_url)

Parameter: dataFilesPath
Type: string
Description: The location of jupyterhub data files (JupyterHub.data_files_path)

Parameter: pamOpenSessions
Type: boolean
Description: Enable SSL communication with HTTPS (PAMAuthenticator.open_sessions)

Parameter: ca
Type: string
Description: Filename containing the PEM-encoded certificate used for the Certification authority (CA)

Parameter: cakey
Type: string
Description: Filename containing the corresponding PEM-encoded private key used for the Certification authority (CA)

Parameter: cert
Type: string
Description: Path to the ssl certificate file (JupyterHub.ssl_cert)

Parameter: key
Type: string
Description: Path to the ssl key file (JupyterHub.ssl_key)

Parameter: adminUsers
Type: list of strings
Description: User with administrator privileges (Authenticator.admin_users)

Parameter: userForService
Type: string
Description: User for running cm-jupyterhub service (defined as User in /usr/lib/systemd/system/cm-jupyterhub.service)

Parameter: trustedDomains
Type: list of strings
Description: Trusted domains to be included in JupyterHub certificates as Alt Subjects.

Parameter: configs
Type: list of JupyterHubConfig
Description: Configuration options JupyterHub
5.2.232 **KernelModule**: Entity

**parent:** Entity

**Parameter:** name
Type: string
Description: The name of the kernel module.

**Parameter:** parameters
Type: string
Description: Options to be passed to the module.

5.2.233 **KeyValuePair**: Entity

**parent:** Entity

**Parameter:** key
Type: string
Description: none

**Parameter:** value
Type: string
Description: none

**Parameter:** onlydaemon
Type: boolean
Description: none

**Parameter:** ispattern
Type: boolean
Description: none

**Parameter:** priority
Type: integer
Description: none

5.2.234 **KeyValueSettings**: Entity

**parent:** Entity

**Parameter:** keyValues
Type: list of strings
Description: List of key=value pairs

5.2.235 **KubeApp**: Entity

**parent:** Entity

**Parameter:** name
Type: string
Description: Object name

Parameter: format
5.2 Entities

**Parameter:** enabled
**Type:** boolean
**Description:** Enable this application

**Parameter:** config
**Type:** string
**Description:** Yaml or json configuration for the object

**Parameter:** extraEnvironment
**Type:** list of KubeAppEnvironment
**Description:** Additional variables for kubernetes apps or kubernetes nodes environment

**Parameter:** excludeListSnippets
**Type:** list of ExcludeListSnippet
**Description:** none

**Parameter:** state
**Type:** integer
**Description:** none

5.2.236 KubeAppEnvironment: Entity
**parent:** Entity

**Parameter:** name
**Type:** string
**Description:** Name

**Parameter:** value
**Type:** string
**Description:** Value

**Parameter:** nodesEnvironment
**Type:** boolean
**Description:** Add variable to the nodes environment

5.2.237 KubeAppGroup: Entity
**parent:** Entity

**Parameter:** name
**Type:** string
**Description:** Object name

**Parameter:** applications
**Type:** list of KubeApp
Description: Kubernetes applications managed by cmdaemon

Parameter: enabled
Type: boolean
Description: Enable this application group

5.2.238 KubeCluster: Entity

Parameter: name
Type: string
Description: Name of the Kubernetes cluster

Parameter: etcdCluster
Type: reference to EtcdCluster or None
Description: The Etcd cluster instance

Parameter: serviceNetwork
Type: reference to Network or None
Description: Network where service cluster IPs will be assigned from (must not overlap with any IP ranges assigned to nodes for pods)

Parameter: podNetwork
Type: reference to Network or None
Description: Network where POD IPs will be assigned from

Parameter: podNetworkNodeMask
Type: string
Description: Pod Network mask size for node cidr in cluster.

Parameter: internalNetwork
Type: reference to Network or None
Description: Network to use to back the internal communications

Parameter: kubeDnsIp
Type: IP
Description: KubeDNS IP address

Parameter: kubernetesApiServer
Type: string
Description: Kubernetes API server address (format: https://host:port)

Parameter: kubernetesApiServerProxyPort
Type: unsigned integer
Description: Kubernetes API server proxy port

Parameter: appGroups
Type: list of KubeAppGroup
Description: Kubernetes applications managed by cmdaemon

Parameter: labelSets
Type: list of KubeLabelSet
Description: Labels managed by cmdaemon

Parameter: notes
Type: string
Description: Notes

Parameter: version
Type: string
Description: Kubernetes Cluster Version

Parameter: trustedDomains
Type: list of strings
Description: Trusted domains to be included in Kubernetes related certificates as Alt Subjects.

Parameter: moduleFileTemplate
Type: string
Description: Template for system module file

Parameter: kubeadm_init_file
Type: string
Description: Kubeadm init file YAML

Parameter: kubeadm_init_cert_key
Type: string
Description: Kubeadm CERT Key

Parameter: kubeadm_ca_cert
Type: string
Description: Kube CA Cert

Parameter: kubeadm_ca_key
Type: string
Description: Kube CA Key

Parameter: users
Type: list of KubeUser
Description: Kubernetes users

Parameter: external
Type: boolean
Description: External kubernetes cluster

Parameter: externalIngressServer
Type: string
Description: Kubernetes Ingress server address (format: https://host:port)

Parameter: externalPort
Type: unsigned integer
Description: External port, set to 0 to disable

Parameter: capiTemplate
Type: boolean
Description: CAPI template kubernetes cluster

Parameter: capiNamespace
Type: string
Description: Kubernetes CAPI namespace

Parameter: kubeCluster
Type: reference to KubeCluster or None
Description: The Kubernetes cluster instance managing this CAPI-deployed Kubernetes Cluster

Parameter: options
Type: free JSON object
Description: Options to configure flags for Kube components

5.2.239 KubeLabelSet: Entity
parent: Entity

Parameter: name
Type: string
Description: Object name

Parameter: labels
Type: list of strings
Description: Node labels

Parameter: nodes
Type: list of references to Node
Description: List of nodes belonging to this label set

Parameter: categories
Type: list of references to Category
Description: List of categories belonging to this label set

Parameter: overlays
Type: list of references to ConfigurationOverlay
Description: List of overlays belonging to this label set
5.2 Entities

5.2.240 KubeletRole: Role

parent: Role

Parameter: kubeCluster
Type: reference to KubeCluster
Description: The Kubernetes cluster instance (pointer)

Parameter: controlPlane
Type: boolean
Description: Control plane node

Parameter: worker
Type: boolean
Description: Worker node

Parameter: containerRuntimeService
Type: string
Description: The container runtime systemd service

Parameter: maxPods
Type: unsigned integer
Description: Number of Pods that can run on this node

Parameter: options
Type: free JSON object
Description: Options to overrule flags for Kube components

5.2.241 KubeNodeLoad: Entity

parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: cpu
Type: float
Description: CPU %

Parameter: mem
Type: float
Description: Memory % of total capacity

Parameter: pods
Type: float
Description: Pods % of maximum
5.2.242 KubePodController: Entity

**parent**: Entity

**Parameter**: name
Type: string
Description: Kubernetes pod controller name

**Parameter**: type
Type: string
Description: Kubernetes pod controller type

**Parameter**: kubeNamespace
Type: string
Description: Namespace name

**Parameter**: uid
Type: string
Description: Pod controller unique ID in Kubernetes

**Parameter**: startTime
Type: timestamp
Description: Pod controller start time

**Parameter**: creationTime
Type: timestamp
Description: Pod controller creation time

**Parameter**: resources
Type: list of strings
Description: List of requested (if pending) or allocated (if started) resources

**Parameter**: labels
Type: list of strings
Description: List of lables assigned to the controller object

**Parameter**: status
Type: string
Description: Current pod controller status

**Parameter**: reason
Type: string
Description: Pod controller status reason

**Parameter**: priority
Type: unsigned integer
Description: Workload priority
5.2.243 KubePodInfo: Entity

parent: Entity

Parameter: name
Type: string
Description: none

Parameter: podNamespace
Type: string
Description: none

Parameter: image
Type: string
Description: none

Parameter: nodes
Type: list of unsigned numbers
Description: none

Parameter: startTime
Type: timestamp
Description: none

Parameter: labels
Type: list of strings
Description: none

Parameter: status
Type: string
Description: none

Parameter: reason
Type: string
Description: none

Parameter: message
Type: string
Description: none

Parameter: ip
Type: IP
Description: none

Parameter: replicaSets
Type: list of strings
Description: none
Parameter: ready
Type: boolean
Description: none

Parameter: volumes
Type: list of strings
Description: none

Parameter: containers
Type: list of ContainerInfo
Description: none

Parameter: creationTime
Type: timestamp
Description: none

Parameter: controllerId
Type: string
Description: none

Parameter: resources
Type: list of strings
Description: List of requested (if pending) or allocated (if started) resources

5.2.244 KubernetesApiServerProxyRole: BaseNginxRole
parent: BaseNginxRole

Parameter: kubeClusters
Type: list of references to KubeCluster
Description: The Kubernetes cluster instances (pointers)

5.2.245 KubeUser: Entity
parent: Entity

Parameter: userName
Type: string
Description: User name (not user ID)

Parameter: manageKubeConfig
Type: boolean
Description: Write a kubeconfig file for this user

Parameter: initialDefaultNamespace
Type: string
Description: namespace to make default when creating kubeconfig
5.2.246 LabeledEntity: Entity

parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: introductionTime
Type: timestamp
Description: Introduction time

Parameter: lastUsedTime
Type: timestamp
Description: Time entity was last used

Parameter: permanent
Type: boolean
Description: Do not allow automatic deletion

5.2.247 LdapServerRole: Role

parent: Role

Parameter: nodegroups
Type: list of references to NodeGroup
Description: List of node groups which can boot from this node

Parameter: categories
Type: list of references to Category
Description: List of categories which can boot from this node

Parameter: racks
Type: list of references to Rack
Description: List of racks which can boot from this node

5.2.248 LicenseInfo: Entity

parent: Entity

Parameter: ref_partition_uuid
Type: UUID
Description: Partition

Parameter: macAddress
Type: string
Description: MAC address linked to the license

Parameter: licensedNodes
Type: unsigned integer
**Description:** Number of pre-paid nodes

**Parameter:** licensedBurstNodes  
**Type:** integer  
**Description:** Number of ondemand nodes

**Parameter:** version  
**Type:** string  
**Description:** Version

**Parameter:** edition  
**Type:** string  
**Description:** Edition

**Parameter:** startTime  
**Type:** timestamp  
**Description:** Time from which the license is active

**Parameter:** endTime  
**Type:** timestamp  
**Description:** Time at which the license stops being valid

**Parameter:** serial  
**Type:** integer  
**Description:** Serial

**Parameter:** licensee  
**Type:** string  
**Description:** Licensee

**Parameter:** nodeCount  
**Type:** unsigned integer  
**Description:** Nodes count with a MAC / cloud-identifier set

**Parameter:** burstNodeCount  
**Type:** unsigned integer  
**Description:** Bursted nodes count

**Parameter:** accountingAndReporting  
**Type:** boolean  
**Description:** Accounting and reporting enabled/disabled

**Parameter:** edgeSites  
**Type:** boolean  
**Description:** Edge sites enabled/disabled

**Parameter:** message
5.2 Entities

Type: string
Description: License count message

Parameter: `licenseType`
Type: string
Description: License type

Parameter: `information`
Type: free JSON object
Description: Information

5.2.249 `LiteMonitoredEntity`: Entity
parent: Entity

Parameter: `name`
Type: string
Description: `none`

Parameter: `types`
Type: list of strings
Description: `none`

Parameter: `resources`
Type: list of strings
Description: `none`

Parameter: `disabled`
Type: boolean
Description: `none`

5.2.250 `LiteMonitoringMeasurable`: Entity
parent: Entity

Parameter: `producer`
Type: UUID
Description: `none`

Parameter: `name`
Type: string
Description: `none`

Parameter: `parameter`
Type: string
Description: `none`

Parameter: `kind`
Type: string
Description: none

Parameter: disabled
Type: boolean
Description: none

Parameter: cumulative
Type: boolean
Description: none

5.2.251 LiteNode: Device
parent: Device

Parameter: ip
Type: IP
Description: Ip address

Parameter: network
Type: reference to Network or None
Description: Network to which this switch is connected

Parameter: additionalHostnames
Type: list of strings
Description: List of additional hostnames that should resolve to the interfaces IP address

Parameter: services
Type: list of OSServiceConfig
Description: Manage operating system services

5.2.252 LSFBaseJob: Job
parent: Job

5.2.253 LSFBaseJobQueue: JobQueue
parent: JobQueue

Parameter: administrators
Type: string
Description: List of queue administrators.

Parameter: corelimit
Type: unsigned integer
Description: The per-process core file size limit (in KB) for all of the processes belonging to a job from this queue.

Parameter: cpulimit
Type: string
Description: Maximum normalized CPU time and optionally, the default normalized CPU time allowed for all processes of a job running in this queue; value format: [default_limit] maximum_limit.
Parameter: chkPnt  
Type: string  
Description: Enables automatic checkpointing; value format: dir [period], where dir is the directory where the checkpoint files are created (do not use environment variables); period is the checkpoint period in minutes.

Parameter: datalimit  
Type: unsigned integer  
Description: The per-process data segment size limit (in KB) for all of the processes belonging to a job from this queue.

Parameter: description  
Type: string  
Description: Description of the queue that will be displayed by 'bqueues -l'

Parameter: default_host_spec  
Type: string  
Description: The default CPU time normalization host for the queue.

Parameter: dispatch_window  
Type: string  
Description: The time windows in which jobs from this queue are dispatched.

Parameter: exclusive  
Type: string  
Description: If Y, specifies an exclusive queue. Jobs submitted to an exclusive queue with 'bsub -x' will only be despatched to a host that has no other LSF jobs running.

Parameter: filelimit  
Type: unsigned integer  
Description: The per-process file size limit (in KB) for all of the processes belonging to a job from this queue.

Parameter: hjob_limit  
Type: unsigned integer  
Description: Maximum number of job slots that this queue can use on any host.

Parameter: hosts  
Type: string  
Description: A space-separated list of hosts, host groups, and host partitions on which jobs from this queue can be run.

Parameter: ignore_deadline  
Type: string  
Description: If Y, disables deadline constraint scheduling (starts all jobs regardless of deadline constraints).

Parameter: interactive
Type: string
Description: Causes the queue to reject interactive batch jobs (NO) or accept nothing but interactive batch jobs (ONLY). Interactive batch jobs are submitted via 'bsub -I'.

Parameter: job_accept_interval
Type: unsigned integer
Description: The number of dispatch turns to wait after dispatching a job to a host, before dispatching a second job to the same host.

Parameter: job_controls
Type: string
Description: Changes the behaviour of the SUSPEND, RESUME, and TERMINATE actions.

Parameter: pre_post_exec_user
Type: string
Description: Username for prolog and epilog execution.

Parameter: prolog
Type: string
Description: Path to prolog script (pre_exec).

Parameter: epilog
Type: string
Description: Path to epilog script (post_exec).

Parameter: hostProlog
Type: string
Description: Path to per host prolog script (host_pre_exec).

Parameter: hostEpilog
Type: string
Description: Path to per host epilog script (host_post_exec).

Parameter: job_starter
Type: string
Description: Creates a specific environment for submitted jobs prior to execution.

Parameter: load_index
Type: string
Description: Scheduling and suspending thresholds for the specified dynamic load index.

Parameter: memlimit
Type: string
Description: The per-process memory resident set size limit (in KB) for all of the processes belonging to a job from this queue. Format is '[default_limit] maximum_limit'.

Parameter: mig
5.2 Entities

Type: unsigned integer
Description: Enables automatic job migration and specifies the migration threshold, in minutes.

Parameter: new_job_sched_delay
Type: unsigned integer
Description: The maximum or minimum length of time that a new job waits before being dispatched; the behavior depends on whether the delay period specified is longer or shorter than a regular dispatch interval (MBD_SLEEP_TIME in lsb.params, 60 seconds by default).

Parameter: nice
Type: unsigned integer
Description: Adjusts the Unix scheduling priority at which jobs from this queue execute.

Parameter: pjob_limit
Type: unsigned integer
Description: The per-processor job slot limit for the queue.

Parameter: processlimit
Type: string
Description: Limits the number of concurrent processes that can be part of a job.

Parameter: proclimit
Type: string
Description: Limits the number of processors that can be allocated to the job.

Parameter: priority
Type: unsigned integer
Description: Queue priority.

Parameter: qjob_limit
Type: unsigned integer
Description: Job slot limit for the queue. Total number of job slots this queue can use.

Parameter: rerunnable
Type: string
Description: If yes, enables automatic job rerun (restart).

Parameter: require_exit_values
Type: string
Description: The exit codes that will cause the job to be requeued.

Parameter: res_req
Type: string
Description: Resource requirements used to determine eligible hosts.

Parameter: resume_cond
Type: string
Description: Use the select section of the resource requirement string to specify load thresholds. All other sections are ignored.

Parameter: run_window
Type: string
Description: Time period during which jobs in the queue are allowed to run.

Parameter: runlimit
Type: string
Description: The maximum run limit and optionally the default run limit. Value format: [default_limit] maximum_limit.

Parameter: slot_reserve
Type: unsigned integer
Description: Enables processor reservation and specifies the number of dispatch turns over which a parallel job can reserve job slots.

Parameter: stacklimit
Type: unsigned integer
Description: The per-process stack segment size limit (in KB) for all of the processes belonging to a job from this queue.

Parameter: stop_cond
Type: string
Description: Use the select section of the resource requirement string to specify load thresholds. All other sections are ignored.

Parameter: swaplimit
Type: unsigned integer
Description: The amount of total virtual memory limit (in KB) for a job from this queue.

Parameter: terminate_when
Type: string
Description: Configures the queue to invoke the TERMINATE action instead of the SUSPEND action in the specified circumstance.

Parameter: ujob_limit
Type: unsigned integer
Description: The per-user job slot limit for the queue. Maximum number of slots that each user can use in this queue.

Parameter: users
Type: string
Description: A list of users or user groups that can submit jobs to this queue. Use the reserved word all to specify all users.

Parameter: r15s
Type: string
Description: Built-in load index: run queue length (15 sec average).

Parameter: \texttt{rlm}
Type: string

Description: Built-in load index: run queue length (1 min average).

Parameter: \texttt{rl15m}
Type: string

Description: Built-in load index: idle time.

Parameter: \texttt{it}
Type: string

Description: Built-in load index: disk I/O.

Parameter: \texttt{io}
Type: string

Description: Built-in load index: CPU utilization.

Parameter: \texttt{ut}
Type: string

Description: Built-in load index: available memory (in MB).

Parameter: \texttt{mem}
Type: string

Description: Built-in load index: pages in + pages out.

Parameter: \texttt{pg}
Type: string

Description: Built-in load index: available space in temporary file system (MB).

Parameter: \texttt{tmp}
Type: string

Description: Built-in load index: available swap space (in MB).

Parameter: \texttt{swp}
Type: string

Description: Built-in load index: available memory (in MB).

Parameter: \texttt{ls}
Type: string

Description: Built-in load index.

\textbf{5.2.254 LSFBaseJobQueueStat: JobQueueStat}

\texttt{parent: JobQueueStat}

Parameter: \texttt{status}
Type: string
Description: Queue status

Parameter: priority
Type: unsigned integer
Description: Queue priority

Parameter: njobs
Type: unsigned integer
Description: Number of all jobs in queue

Parameter: suspended
Type: unsigned integer
Description: Number of suspended jobs in queue

5.2.255  LSFcgroupsSettings: WlmCgroupsSettings
parent: WlmCgroupsSettings

Parameter: resourceEnforce
Type: list of strings
Description: Controls resource enforcement through the Linux cgroup memory and cpuset subsystem on Linux systems with cgroup support (LSB_RESOURCE_ENFORCE)

Parameter: processTracking
Type: boolean
Description: Enable this parameter to track processes based on job control functions such as termination, suspension, resume and other signaling, on Linux systems which support cgroups freezer subsystem (LSF_PROCESS_TRACKING)

Parameter: linuxCgroupAccounting
Type: boolean
Description: Enable this parameter to track processes based on CPU and memory accounting for Linux systems that support cgroup’s memory and cpuacct subsystems (LSF_LINUX_CGROUP_ACCT)

Parameter: jobCgroupTemplate
Type: string
Description: Template for job cgroup path ($CLUSTER will be replaced to LSF cluster name, $JOBID will be replaced to job id)

5.2.256  LSFClientRole: LSFRole
parent: LSFRole

Parameter: slots
Type: string
Description: Number of slots available on this node/category

Parameter: queues
Type: list of references to LSFJobQueue
Description: Queues this node/nodes in this category belongs to
Parameter:  allQueues
Type:  boolean
Description:  When set, the role will provide all available queues (the queues property will then be ignored)

Parameter:  gpus
Type:  unsigned integer
Description:  Number of gpus

Parameter:  gpuDevices
Type:  list of strings
Description:  /dev/* available to workload management

Parameter:  server
Type:  boolean
Description:  Is LSF server (can run jobs)

Parameter:  IMEX
Type:  boolean
Description:  Start IMEX daemon from prolog/epilog

Parameter:  hostModel
Type:  string
Description:  Host model (possible values are defined in lsf.shared)

Parameter:  hostType
Type:  string
Description:  Host type (possible values are defined in lsf.shared)

Parameter:  nodeCustomizations
Type:  list of WlmNodeCustomizationEntry
Description:  LSF node custom properties

5.2.257 LSFJob: LSFBaseJob
parent: LSFBaseJob

5.2.258 LSFJobQueue: LSFBaseJobQueue
parent: LSFBaseJobQueue

Parameter:  fairshare
Type:  string
Description:  Fairshare scheduling

Parameter:  backfill
Type:  string
Description:  Backfill scheduling

Parameter:  preemption
Type: string
Description: Preemption scheduling

Parameter: defaultQueue
Type: boolean
Description: Specifies the queue which is to accept jobs when no queue is requested

5.2.259 LSFJobQueueStat: LSFBaseJobQueueStat
parent: LSFBaseJobQueueStat

5.2.260 LSRole: Role
parent: Role

Parameter: wlmCluster
Type: reference to LSFWlmCluster
Description: WLM cluster link to this WLM role

5.2.261 LSFServerRole: LSRole
parent: LSRole

Parameter: externalServer
Type: boolean
Description: LSF server daemons are running on some external machine

5.2.262 LSFSubmitRole: WlmSubmitRole
parent: WlmSubmitRole

Parameter: lsfWlmClusters
Type: list of references to LSFWlmCluster
Description: List of LSF clusters which the role belongs to

Parameter: hostType
Type: string
Description: Host type (possible values are defined in lsf.shared)

5.2.263 LSFWlmCluster: WlmCluster
parent: WlmCluster

Parameter: version
Type: string
Description: Major LSF version

Parameter: prefix
Type: string
Description: LSF installation directory

Parameter: var
Type: string
Description: Var directory location
Parameter: `localVar`
Type: string
Description: Local var directory location

Parameter: `logDir`
Type: string
Description: Logging directory location (LSF_LOGDIR in lsf.conf)

Parameter: `dynamicCloudNodes`
Type: boolean
Description: Cloud nodes are added dynamically to LSF

Parameter: `placeholders`
Type: list of `JobQueuePlaceholder`
Description: Job queue node placeholders mode

Parameter: `cgroups`
Type: `LSFCgroupsSettings`
Description: Submode containing LSF related cgroups settings

Parameter: `doBackups`
Type: boolean
Description: Backup configuration file before update

Parameter: `gpuAutoconfig`
Type: boolean
Description: Enable GPU autodetection (LSF_GPU_AUTOCONFIG in lsf.conf)

Parameter: `gpuNewSyntax`
Type: boolean
Description: Enable new GPU request syntax (LSB_GPU_NEW_SYNTAX in lsf.conf)

Parameter: `dcgmPort`
Type: unsigned integer
Description: Enable DCGM features and specifies the port number that LSF uses to communicate with the DCGM daemon (0 for disabled)

Parameter: `unitForLimits`
Type: string
Description: Enables scaling of large units in the resource usage limits (LSF_UNIT_FOR_LIMITS in lsf.conf)

Parameter: `noQueueHostsString`
Type: string
Description: String that is used to replace empty nodes list for a queue

Parameter: `enableEgo`
Type: boolean
Description: Enable EGO functionality (LSF_ENABLE_EGO in lsf.conf)

Parameter: dynamicHostWaitTime
Type: unsigned integer
Description: Defines the length of time in seconds that a dynamic host awaits communicating with the master host LIM to either add the host to the cluster or to shut down any running daemons if the host is not added successfully. Note that the time will be truncated to the minute (LSF_DYNAMIC_HOST_WAIT_TIME in lsf.conf)

Parameter: hostAddressRange
Type: string
Description: Identifies the range of IP addresses that are allowed to be LSF hosts that can be dynamically added to or removed from the cluster (LSF_HOST_ADDR_RANGE in lsf.conf)

Parameter: manageMIG
Type: boolean
Description: enable dynamic MIG scheduling (LSF_MANAGE_MIG in lsf.conf)

5.2.264 MemoryInfo: Entity
parent: Entity

Parameter: IDs
Type: list of strings
Description: IDs

Parameter: locations
Type: list of strings
Description: Location

Parameter: speed
Type: unsigned integer
Description: Speed

Parameter: size
Type: unsigned integer
Description: Size

Parameter: description
Type: string
Description: Description

5.2.265 MIGInformation: Entity
parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node
5.2 Entities

Parameter: gpuId
Type: unsigned integer
Description: The hardware GPU identifier

Parameter: name
Type: string
Description: none

Parameter: profileId
Type: unsigned integer
Description: none

Parameter: instanceId
Type: unsigned integer
Description: none

Parameter: placementStart
Type: unsigned integer
Description: none

Parameter: placementSize
Type: unsigned integer
Description: none

Parameter: memory
Type: unsigned integer
Description: none

Parameter: P2P
Type: boolean
Description: none

Parameter: SM
Type: unsigned integer
Description: none

Parameter: CE
Type: unsigned integer
Description: none

Parameter: DEC
Type: unsigned integer
Description: none

Parameter: JPEG
Type: unsigned integer
Description: none

Parameter: ENC
Type: unsigned integer
Description: none

Parameter: OFA
Type: unsigned integer
Description: none

5.2.266 MonitoringAction: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: runOn
Type: enum
Description: Run the action on

Parameter: allowedTime
Type: string
Description: Sets time interval during which action is allowed to be executed

Parameter: disable
Type: boolean
Description: Disable

Parameter: suppressedByGoingDown
Type: boolean
Description: Suppress running action if device is going down

5.2.267 MonitoringActionRunData: Entity
parent: Entity

Parameter: target
Type: UUID
Description: Target node

Parameter: info
Type: string
Description: Extra information

Parameter: env
Type: list of strings
Description: Environment
5.2 Entities

5.2.268 MonitoringCacheSubSystemInfo: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: queued
Type: unsigned integer
Description: Number of samples ready for delivery

Parameter: pickup
Type: unsigned integer
Description: Number of times data has been picked up

Parameter: delivered
Type: unsigned integer
Description: Number of samples delivered the last pick up

Parameter: handled
Type: unsigned integer
Description: Total number of samples handled

5.2.269 MonitoringCategoryListExecutionFilter: MonitoringExecutionFilter
parent: MonitoringExecutionFilter

Parameter: categories
Type: list of references to Category
Description: List of categories belonging to this group

5.2.270 MonitoringCategoryListExecutionMultiplexer: MonitoringExecutionMultiplexer
parent: MonitoringExecutionMultiplexer

Parameter: categories
Type: list of references to Category
Description: List of categories belonging to this group

5.2.271 MonitoringCompareExpression: MonitoringExpression
parent: MonitoringExpression

Parameter: entities
Type: string
Description: Entities matching the regex, leave empty for all

Parameter: measurables
Type: string
Description: Measurables matching the regex, leave empty for all
Parameter: parameters
Type: string
Description: Parameters matching the regex, leave empty for all

Parameter: op
Type: enum
Description: Operator

Parameter: grouping
Type: enum
Description: Method to group all matching entity measurable parameter

Parameter: value
Type: string
Description: Value

Parameter: useRaw
Type: boolean
Description: Use raw data instead of rate for cumulative metrics

Parameter: code
Type: string
Description: Lua code

5.2.272 MonitoringConsolidator: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: disabled
Type: boolean
Description: Disable, consolidator for all entities. Do not throw away existing data.

Parameter: consolidators
Type: list of Consolidator
Description: Consolidators

5.2.273 MonitoringDataCacheSubSystemInfo: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: size
Type: unsigned integer
5.2 Entities

Description: First plot request

Parameter: updates
Type: unsigned integer
Description: Last plot request

Parameter: requests
Type: unsigned integer
Description: Number of plot requests

5.2.274 MonitoringDataProducer: Entity

parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: description
Type: string
Description: Description

Parameter: notes
Type: string
Description: Administrator notes

Parameter: when
Type: enum
Description: When the producer should run

Parameter: maxAge
Type: float
Description: Maximal age of historic data, 0 for infinite

Parameter: maxSamples
Type: unsigned integer
Description: Maximal samples of historic data, 0 for infinite

Parameter: interval
Type: float
Description: Sampling interval

Parameter: offset
Type: float
Description: Time offset for sampling interval

Parameter: startupDelay
Type: float
Description: Delay the first sampling the specified time after cmd starts

Parameter: `intervals`
Type: list of floating point numbers
Description: Out of band sampling interval

Parameter: `gap`
Type: unsigned integer
Description: Number of missed samples before we add a NaN

Parameter: `fuzzyOffset`
Type: float
Description: Automatic fuzzy offset factor [0-1]. Multiplied by interval

Parameter: `introduceNaN`
Type: boolean
Description: Introduce NaN if device goes up/down/up

Parameter: `automaticReinitialize`
Type: boolean
Description: Automatic run -initialize when a new metric has been detected

Parameter: `disabled`
Type: boolean
Description: Disabled

Parameter: `disableTriggers`
Type: boolean
Description: Disable triggers from being evaluated

Parameter: `disableOnHighLoad`
Type: boolean
Description: Disable when nodes are very busy

Parameter: `nodeExecutionFilters`
Type: list of MonitoringExecutionFilter
Description: Filter nodes which should run this data producer. If none are specified: execute on each node.

Parameter: `executionMultiplexers`
Type: list of MonitoringExecutionMultiplexer
Description: Execute the producer once for each entity which matches one of the criteria. If none are specified: only execute it for the node itself.

Parameter: `consolidator`
Type: reference to MonitoringConsolidator or None
5.2 Entities

Description: Consolidator configuration

Parameter: suppressedByGoingDown
Type: boolean
Description: Suppress running action if device is going down

Parameter: access
Type: enum
Description: User access control

Parameter: associatedUser
Type: string
Description: User associated with this measurable

5.2.275 MonitoringDataProducerAggregateNode: MonitoringDataProducerInternal

parent: MonitoringDataProducerInternal

Parameter: maxSampleAge
Type: float
Description: Maximal age of node sample to contribute

Parameter: excludeNodes
Type: list of references to Node
Description: List of nodes to exclude from the total

Parameter: excludeCategories
Type: list of references to Category
Description: List of node groups to exclude from the total

Parameter: excludeNodeGroups
Type: list of references to NodeGroup
Description: List of node groups to exclude from the total

5.2.276 MonitoringDataProducerAggregatePDU: MonitoringDataProducerInternal

parent: MonitoringDataProducerInternal

Parameter: maxSampleAge
Type: float
Description: Maximal age of node sample to contribute

Parameter: excludePDUs
Type: list of references to PowerDistributionUnit
Description: List of PDUs to exclude from the total
5.2.277 MonitoringDataProducerAlertLevel: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal

5.2.278 MonitoringDataProducerClusterTotal: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal

5.2.279 MonitoringDataProducerCMDaemonState: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal

Parameter: subsystems
Type: list of strings
Description: Subsystems

5.2.280 MonitoringDataProducerDeviceState: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal

5.2.281 MonitoringDataProducerDPU: MonitoringDataProducer
parent: MonitoringDataProducer

Parameter: dpuSettings
Type: MonitoringDataProducerDPUSettings
Description: Submode containing DPU settings

5.2.282 MonitoringDataProducerDPUSettings: Entity
parent: Entity

Parameter: enable_pcie0
Type: boolean
Description: Enable pcie0 metrics

Parameter: enable_pcie1
Type: boolean
Description: Enable pcie1 metrics

Parameter: enable_ecc
Type: boolean
Description: Enable ecc metrics

Parameter: configured_events
Type: list of MonitoringDataProducerDPUSettingsEvent
Description: Configured of the event

5.2.283 MonitoringDataProducerDPUSettingsEvent: Entity
parent: Entity

Parameter: index
Type: unsigned integer
Description: Index

Parameter: counter
5.2 Entities

Type: unsigned integer
Description: Counter

5.2.284 MonitoringDataProducerDPUSettingsEventGic:
    MonitoringDataProducerDPUSettingsEvent
parent: MonitoringDataProducerDPUSettingsEvent

Parameter: event
Type: enum
Description: Event value from the event list that will be sampled

5.2.285 MonitoringDataProducerDPUSettingsEventL3CacheHalf:
    MonitoringDataProducerDPUSettingsEvent
parent: MonitoringDataProducerDPUSettingsEvent

Parameter: event
Type: enum
Description: Event value from the event list that will be sampled

5.2.286 MonitoringDataProducerDPUSettingsEventSmmu:
    MonitoringDataProducerDPUSettingsEvent
parent: MonitoringDataProducerDPUSettingsEvent

Parameter: event
Type: enum
Description: Event value from the event list that will be sampled

5.2.287 MonitoringDataProducerDPUSettingsEventTile:
    MonitoringDataProducerDPUSettingsEvent
parent: MonitoringDataProducerDPUSettingsEvent

Parameter: event
Type: enum
Description: Event value from the event list that will be sampled

5.2.288 MonitoringDataProducerDPUSettingsEventTilenet:
    MonitoringDataProducerDPUSettingsEvent
parent: MonitoringDataProducerDPUSettingsEvent

Parameter: event
Type: enum
Description: Event value from the event list that will be sampled

5.2.289 MonitoringDataProducerDPUSettingsEventTrio:
    MonitoringDataProducerDPUSettingsEvent
parent: MonitoringDataProducerDPUSettingsEvent

Parameter: event
Type: enum
Description: Event value from the event list that will be sampled
5.2.290 MonitoringDataProducerDPUSettingsEventTriogen:
  MonitoringDataProducerDPUSettingsEvent
  parent: MonitoringDataProducerDPUSettingsEvent

Parameter: event
Type: enum
Description: Event value from the event list that will be sampled

5.2.291 MonitoringDataProducerEC2SpotPrices: MonitoringDataProducerInternal
  parent: MonitoringDataProducerInternal

Parameter: regions
Type: enum
Description: Regions to collect data for

Parameter: customRegions
Type: list of references to EC2Region
Description: Custom list of regions to collect data from

Parameter: types
Type: enum
Description: Types to collect data for

Parameter: customTypes
Type: list of references to EC2Type
Description: Custom list of types to collect data from

5.2.292 MonitoringDataProducerFabricTotal: MonitoringDataProducerInternal
  parent: MonitoringDataProducerInternal

5.2.293 MonitoringDataProducerGPU: MonitoringDataProducer
  parent: MonitoringDataProducer

Parameter: updateFreq
Type: float
Description: Update frequency of the internal cuda metric sampler

5.2.294 MonitoringDataProducerInternal: MonitoringDataProducer
  parent: MonitoringDataProducer

5.2.295 MonitoringDataProducerJob: MonitoringDataProducer
  parent: MonitoringDataProducer

Parameter: allowPreAllocate
Type: boolean
Description: Allow pre-allocate of monitoring structures, speeds up for large number of jobs. Disable if measurables per node differ a lot

Parameter: metricSettings
Type: MonitoringJobMetricSettings
Description: Submode containing job metric settings

5.2.296 MonitoringDataProducerJobMetadata: MonitoringDataProducer
parent: MonitoringDataProducer

Parameter: allowPreAllocate
Type: boolean
Description: Allow pre-allocate of monitoring structures, speeds up for large number of jobs. Disable if measurables per node differ a lot

Parameter: excludeMetrics
Type: list of strings
Description: Exclude metrics by name from collection

Parameter: includeMetrics
Type: list of strings
Description: Only these metrics will be samples if the set is not empty

Parameter: excludeUsers
Type: list of strings
Description: Exclude usage data for the specified users

Parameter: includeUsers
Type: list of strings
Description: Only include usage data for the specified users

Parameter: excludeShell
Type: list of strings
Description: Exclude usage data for the specified shells

Parameter: minimalUserId
Type: unsigned integer
Description: Minumal user ID

Parameter: userCode
Type: string
Description: Lua code for calculation of extra metric per user

Parameter: storeLastChangeTimestamp
Type: boolean
Description: Add extra metric to store last change timestamp

5.2.297 MonitoringDataProducerJobQueue: MonitoringDataProducer
parent: MonitoringDataProducer

Parameter: wlmClusters
Type: list of references to WlmCluster
Description: List of wlm clusters for which to sample, empty for all

5.2.298 MonitoringDataProducerLua: MonitoringDataProducer
parent: MonitoringDataProducer

Parameter: code
Type: string
Description: Lua code

Parameter: timeout
Type: unsigned integer
Description: Lua timeout

5.2.299 MonitoringDataProducerMonitoringSystem: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal

5.2.300 MonitoringDataProducerPerpetual: MonitoringDataProducer
parent: MonitoringDataProducer

Parameter: script
Type: string
Description: Script

Parameter: runInBash
Type: boolean
Description: Run the script in a bash session

Parameter: arguments
Type: list of strings
Description: Additional arguments to pass to the script

Parameter: format
Type: enum
Description: Expected output format

Parameter: watch
Type: boolean
Description: Watch script for changes, and restart

5.2.301 MonitoringDataProducerPowerDistributionUnit: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal

5.2.302 MonitoringDataProducerProcMemInfo: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal

5.2.303 MonitoringDataProducerProcMount: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal

Parameter: includeMedia
Type: boolean
Description: Include media mount points

Parameter: includeRemote
Type: boolean
Description: Include remote mount points

Parameter: includeDocker
Type: boolean
Description: Include docker mount points

Parameter: excludeMountPoints
Type: list of strings
Description: Exclude mount points

5.2.304 MonitoringDataProducerProcNetDev: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal

Parameter: excludeIf
Type: list of strings
Description: Exclude interfaces

Parameter: includeAll
Type: boolean
Description: Include all metrics

5.2.305 MonitoringDataProducerProcNetSnmp: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal

5.2.306 MonitoringDataProducerProcPidStat: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal

Parameter: pid
Type: unsigned integer
Description: PID to sample

Parameter: process
Type: string
Description: Process

5.2.307 MonitoringDataProducerProcStat: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal

Parameter: individualCPU
Type: boolean
Description: Measure individual CPUs
5.2.308 MonitoringDataProducerProcVMStat: MonitoringDataProducerInternal

parent: MonitoringDataProducerInternal

5.2.309 MonitoringDataProducerPrometheus: MonitoringDataProducer

parent: MonitoringDataProducer

Parameter: urls
Type: list of strings
Description: One or more URLs to try connect to

Parameter: timeout
Type: unsigned integer
Description: Http get timeout

Parameter: passEnvironment
Type: boolean
Description: Pass the entity environment to the script

Parameter: username
Type: string
Description: Username used in http call

Parameter: password
Type: string
Description: Password used in http call

Parameter: https
Type: boolean
Description: https

Parameter: caPath
Type: string
Description: CA certificate path

Parameter: privateKeyPath
Type: string
Description: Certificate path

Parameter: certificatePath
Type: string
Description: Private key path

Parameter: staleTracking
Type: boolean
Description: Enable automatic tracking of stale metrics

Parameter: withCertificate
Type: boolean
5.2 Entities

Description: Pass the cmdaemon certificate to make the call

Parameter: includeProducerJobName
Type: boolean
Description: Automatically include producer job name in Prometheus label

Parameter: includeEntityName
Type: boolean
Description: Automatically include entity name in Prometheus label

5.2.310 MonitoringDataProducerRackSensor: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal

5.2.311 MonitoringDataProducerRedFishSubscription: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal

5.2.312 MonitoringDataProducerScript: MonitoringDataProducer
parent: MonitoringDataProducer

Parameter: script
Type: string
Description: Script

Parameter: timeout
Type: unsigned integer
Description: Script timeout

Parameter: arguments
Type: list of strings
Description: Additional arguments to pass to the script

Parameter: format
Type: enum
Description: Expected output format

5.2.313 MonitoringDataProducerSingleLineHealthCheckScript: MonitoringDataProducerSingleLineScript
parent: MonitoringDataProducerSingleLineScript

5.2.314 MonitoringDataProducerSingleLineMetricScript: MonitoringDataProducerSingleLineScript
parent: MonitoringDataProducerSingleLineScript

Parameter: minimum
Type: float
Description: Minimum

Parameter: maximum
Type: float
Parameter: cumulative
Type: boolean
Description: Cumulative

Parameter: unit
Type: string
Description: Unit

5.2.315 MonitoringDataProducerSingleLineScript: MonitoringDataProducer
parent: MonitoringDataProducer

Parameter: script
Type: string
Description: Script

Parameter: typeClass
Type: string
Description: Type class, slash(/) separated for levels

Parameter: timeout
Type: unsigned integer
Description: Script timeout

Parameter: arguments
Type: list of strings
Description: Additional arguments to pass to the script

Parameter: runInBash
Type: boolean
Description: Run the script in a bash session

5.2.316 MonitoringDataProducerSwitch: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal

5.2.317 MonitoringDataProducerSysBlockStat: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal

Parameter: excludeVirtualDisks
Type: boolean
Description: Exclude virtual disks

Parameter: excludeDisks
Type: list of strings
Description: Exclude disks
5.2 Entities

5.2.318 MonitoringDataProducerSysInfo: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal

5.2.319 MonitoringDataProducerTest: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal
Parameter: instances
Type: unsigned integer
Description: Number of instances per test

5.2.320 MonitoringDataProducerTrustedTool: MonitoringDataProducer
parent: MonitoringDataProducer
Parameter: port
Type: unsigned integer
Description: Port
Parameter: localhost
Type: boolean
Description: Only listen on localhost
Parameter: secret
Type: string
Description: Secret

5.2.321 MonitoringDataProducerUserCount: MonitoringDataProducerInternal
parent: MonitoringDataProducerInternal
Parameter: customScript
Type: string
Description: Custom script
Parameter: customScriptTimeout
Type: unsigned integer
Description: Custom script timeout
Parameter: minimalUserId
Type: unsigned integer
Description: Minimal user ID
Parameter: namesInInfoMessage
Type: boolean
Description: Names in info message, could lead to lots of data

5.2.322 MonitoringDataProducerWlmSlot: MonitoringDataProducer
parent: MonitoringDataProducer

5.2.323 MonitoringDeviceStateSubSystemInfo: Entity
parent: Entity
Parameter: name
Type: string
Description: Name

Parameter: up
Type: unsigned integer
Description: Number of up devices

Parameter: down
Type: unsigned integer
Description: Number of down devices

Parameter: closed
Type: unsigned integer
Description: Number of closed devices

Parameter: muted
Type: unsigned integer
Description: Number of muted devices

5.2.324 MonitoringDrainAction: MonitoringAction
parent: MonitoringAction

5.2.325 MonitoringDynamicExecutionMultiplexer: MonitoringExecutionMultiplexer
parent: MonitoringExecutionMultiplexer

Parameter: local
Type: boolean
Description: Run on the local node

Parameter: offload
Type: boolean
Description: Run on the nodes offloaded onto this node

5.2.326 MonitoringEmailAction: MonitoringAction
parent: MonitoringAction

Parameter: recipients
Type: list of strings
Description: Recipients

Parameter: allAdministrators
Type: boolean
Description: Also send e-mail to all administrator

Parameter: server
Type: string
Description: The SNMP server
Parameter: sender
Type: string
Description: The sender of the e-mail

Parameter: info
Type: string
Description: Extra information passed in the e-mail

Parameter: timeout
Type: unsigned integer
Description: Timeout

Parameter: mergeDelay
Type: float
Description: Maximal action delay in order to merge with others

Parameter: mergeTrigger
Type: boolean
Description: Merge action from multiple triggers into one

Parameter: mergeMeasurable
Type: boolean
Description: Merge action from multiple measurables into one

5.2.327 MonitoringEventAction: MonitoringAction
parent: MonitoringAction

Parameter: profiles
Type: list of strings
Description: Inform all sessions with the specified profile, none is all

Parameter: userNames
Type: list of strings
Description: Inform all sessions with the specified user names, none is all

Parameter: mergeDelay
Type: float
Description: Maximal action delay in order to merge with others

5.2.328 MonitoringExecutionFilter: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: filterOperation
Type: enum
Description: The filter operation to be performed

5.2.329 MonitoringExecutionMultiplexer: Entity

parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: filterOperation
Type: enum
Description: The filter operation to be performed

5.2.330 MonitoringExpression: Entity

parent: Entity

Parameter: name
Type: string
Description: Name

5.2.331 MonitoringGroupedExpression: MonitoringExpression

parent: MonitoringExpression

Parameter: op
Type: enum
Description: Operator

Parameter: allowMissing
Type: boolean
Description: Allow missing sub expressions

Parameter: expressions
Type: list of MonitoringCompareExpression
Description: Expressions

5.2.332 MonitoringHealthOverview: Entity

parent: Entity

Parameter: ref_entity_uid
Type: UUID
Description: Entity

Parameter: alertLevelMaximum
Type: unsigned integer
Description: Maximal severity of all failed triggers

Parameter: alertLevelSum
Type: unsigned integer
Description: Total severity of all failed triggers

Parameter: alertLevelCount
Type: unsigned integer
Description: Total count of all failed triggers

Parameter: timestamp
Type: unsigned integer
Description: Timestamp of data

Parameter: info
Type: string
Description: Info

5.2.333 MonitoringImageUpdateAction: MonitoringAction
parent: MonitoringAction

5.2.334 MonitoringJobMetricSettings: Entity
parent: Entity

Parameter: excludeDevices
Type: list of strings
Description: Exclude block devices from metric collection (by default all the devices are sampled)

Parameter: includeDevices
Type: list of strings
Description: Only these devices will be sampled if the set is not empty

Parameter: enableAdvancedMetrics
Type: boolean
Description: Sample advanced metrics as well as basic metrics

Parameter: mapJobsToGpus
Type: boolean
Description: Associate job with GPUs where the job processes run when possible

Parameter: excludeMetrics
Type: list of strings
Description: Exclude metrics by name from collection

Parameter: includeMetrics
Type: list of strings
Description: Only these metrics will be samples if the set is not empty

Parameter: cgroupBaseDirectory
Type: string
Description: CGroup base directory
Parameter: cgroupSearch
Type: string
Description: Search field for finding the WLM CGroup

Parameter: keepAliveSleep
Type: float
Description: Time the cgroup keepalive process sleeps

Parameter: samplingType
Type: enum
Description: Type of metrics sampling

Parameter: pickupInterval
Type: float
Description: High initial pickup interval

Parameter: pickupTimes
Type: unsigned integer
Description: Number of times to apply the high initial pickup interval

Parameter: pickupPriority
Type: unsigned integer
Description: Priority of the pickup interval change

5.2.335 MonitoringLuaExecutionFilter: MonitoringExecutionFilter
parent: MonitoringExecutionFilter

Parameter: code
Type: string
Description: Lua code

Parameter: notes
Type: string
Description: Notes

5.2.336 MonitoringLuaExecutionMultiplexer: MonitoringExecutionMultiplexer
parent: MonitoringExecutionMultiplexer

Parameter: code
Type: string
Description: Lua code

Parameter: notes
Type: string
Description: Notes
5.2 Entities

5.2.337 MonitoringMeasurable: Entity

parent: Entity

Parameter: producer
Type: reference to MonitoringDataProducer
Description: Monitoring data producer

Parameter: name
Type: string
Description: Name

Parameter: parameter
Type: string
Description: Parameter

Parameter: maxAge
Type: float
Description: Maximal age of historic data, 0 for infinite

Parameter: maxSamples
Type: unsigned integer
Description: Maximal samples of historic data, 0 for infinite

Parameter: disabled
Type: boolean
Description: Disable: do not process or save to disk

Parameter: disableTriggers
Type: boolean
Description: Disable triggers from being evaluated

Parameter: gap
Type: unsigned integer
Description: Number of missed samples before we add a NaN

Parameter: introduceNaN
Type: boolean
Description: Introduce NaN if device goes up/down/up

Parameter: description
Type: string
Description: Description

Parameter: typeClass
Type: string
Description: Type class, slash(/) separated for levels
Parameter: sourceType
Type: enum
Description: Source of the measurable

Parameter: consolidator
Type: reference to MonitoringConsolidator or None
Description: Consolidator configuration

Parameter: suppressedByGoingDown
Type: boolean
Description: Suppress running action if device is going down

Parameter: access
Type: enum
Description: User access control

Parameter: associatedUser
Type: string
Description: User associated with this measurable

5.2.338 MonitoringMeasurableEnum: MonitoringMeasurable
parent: MonitoringMeasurable

5.2.339 MonitoringMeasurableHealthCheck: MonitoringMeasurable
parent: MonitoringMeasurable

5.2.340 MonitoringMeasurableMetric: MonitoringMeasurable
parent: MonitoringMeasurable

Parameter: minimum
Type: float
Description: Minimum

Parameter: maximum
Type: float
Description: Maximum

Parameter: cumulative
Type: boolean
Description: Cumulative

Parameter: unit
Type: string
Description: Unit

5.2.341 MonitoringNodeListExecutionFilter: MonitoringExecutionFilter
parent: MonitoringExecutionFilter

Parameter: nodes
5.2 Entities

Type: list of references to Node
Description: List of nodes belonging to this group

5.2.342 MonitoringNodeListExecutionMultiplexer: MonitoringExecutionMultiplexer

parent: MonitoringExecutionMultiplexer

Parameter: nodes
Type: list of references to Node
Description: List of nodes belonging to this group

5.2.343 MonitoringOffloadBackupInformation: Entity

parent: Entity

Parameter: ref_monitoring_node_uuid
Type: UUID
Description: Node

Parameter: ref_backup_node_uuids
Type: list of unsigned numbers
Description: Node

5.2.344 MonitoringOffloadInformation: Entity

parent: Entity

Parameter: ref_monitoring_node_uuid
Type: UUID
Description: Node

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: ref_best_monitoring_node_uuid
Type: UUID
Description: Node

Parameter: ref_viable_monitoring_node_uuids
Type: list of unsigned numbers
Description: Node

5.2.345 MonitoringOverlayListExecutionFilter: MonitoringExecutionFilter

parent: MonitoringExecutionFilter

Parameter: overlays
Type: list of references to ConfigurationOverlay
Description: List of overlays belonging to this group
5.2.346 MonitoringOverlayListExecutionMultiplexer: MonitoringExecutionMultiplexer
parent: MonitoringExecutionMultiplexer

Parameter: overlays
Type: list of references to ConfigurationOverlay
Description: List of overlays belonging to this group

5.2.347 MonitoringPickupInterval: Entity
parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: interval
Type: float
Description: Interval on which the RPC will be done

Parameter: times
Type: unsigned integer
Description: Number of times the RPC will be done with the interval

Parameter: priority
Type: unsigned integer
Description: Priority of the current pickup interval

5.2.348 MonitoringPlotterSubSystemInfo: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: first
Type: unsigned integer
Description: First plot request

Parameter: last
Type: unsigned integer
Description: Last plot request

Parameter: count
Type: unsigned integer
Description: Number of plot requests

Parameter: samples
Type: unsigned integer
5.2 Entities

Description: Number of data samples

Parameter: sources
Type: unsigned integer
Description: Number of sources

5.2.349 MonitoringPowerAction: MonitoringAction
parent: MonitoringAction

5.2.350 MonitoringPowerOffAction: MonitoringPowerAction
parent: MonitoringPowerAction

5.2.351 MonitoringPowerOnAction: MonitoringPowerAction
parent: MonitoringPowerAction

5.2.352 MonitoringPowerResetAction: MonitoringPowerAction
parent: MonitoringPowerAction

5.2.353 MonitoringRebootAction: MonitoringAction
parent: MonitoringAction

Parameter: runPreHaltOperations
Type: boolean
Description: Run pre-halt operations

Parameter: preHaltOperationTimeout
Type: unsigned integer
Description: Run pre-halt operation timeout

5.2.354 MonitoringResourceExecutionFilter: MonitoringExecutionFilter
parent: MonitoringExecutionFilter

Parameter: resources
Type: list of strings
Description: Resources

Parameter: op
Type: enum
Description: Operator

5.2.355 MonitoringResourceExecutionMultiplexer: MonitoringExecutionMultiplexer
parent: MonitoringExecutionMultiplexer

Parameter: resources
Type: list of strings
Description: Resources

Parameter: op
Type: enum
Description: Operator

5.2.356 MonitoringRole: Role

parent: Role

Parameter: numberOfBackups
Type: unsigned integer
Description: Minimum number of backups of the monitoring data

Parameter: backupRing
Type: unsigned integer
Description: Only backup to nodes within the same ring

Parameter: maximumNumberOfNodes
Type: unsigned integer
Description: Maximum number of nodes the monitoring can handle, set to 0 for no limit

Parameter: delayAfterUp
Type: unsigned integer
Description: Delay after node becomes up before it can take over from other nodes

Parameter: delayAfterDown
Type: unsigned integer
Description: Delay after node goes down before the workload will be offloaded to other nodes

Parameter: backupOnShutdown
Type: boolean
Description: Take a backup when the node is shutdown via RPC

Parameter: backupOnReboot
Type: boolean
Description: Take a backup when the node is reboot via RPC

Parameter: backupOnPowerOff
Type: boolean
Description: Take a backup when the node is power reset via RPC

Parameter: backupOnPowerReset
Type: boolean
Description: Take a backup when the node is powered off via RPC

Parameter: backupOnTerminate
Type: boolean
Description: Take a backup when the node is terminated via RPC

Parameter: nodeFilters
Type: list of MonitoringExecutionFilter
Description: Filter nodes that can be monitored by this node, clear this list for automatic

5.2.357 MonitoringScriptAction: MonitoringAction
parent: MonitoringAction

Parameter: script
Type: string
Description: Script

Parameter: arguments
Type: list of strings
Description: Arguments

Parameter: timeout
Type: unsigned integer
Description: Timeout

Parameter: nodeEnvironment
Type: boolean
Description: Pass the node environment to the script

Parameter: runInShell
Type: boolean
Description: Run in shell

Parameter: mergeDelay
Type: float
Description: Maximal action delay in order to merge with others

Parameter: mergeTrigger
Type: boolean
Description: Merge action from multiple triggers into one

Parameter: mergeMeasurable
Type: boolean
Description: Merge action from multiple measurables into one

5.2.358 MonitoringServiceAction: MonitoringAction
parent: MonitoringAction

Parameter: service
Type: string
Description: Service

Parameter: arguments
Type: list of strings
Description: Arguments
5.2.359 MonitoringServiceRestartAction: MonitoringServiceAction
parent: MonitoringServiceAction

5.2.360 MonitoringServiceStartAction: MonitoringServiceAction
parent: MonitoringServiceAction

5.2.361 MonitoringServiceStopAction: MonitoringServiceAction
parent: MonitoringServiceAction

5.2.362 MonitoringServiceSubSystemInfo: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: stopped
Type: boolean
Description: Stopped

Parameter: suspended
Type: boolean
Description: Suspended

Parameter: last
Type: unsigned integer
Description: Last sample time

Parameter: queued
Type: unsigned integer
Description: Queued items

Parameter: handled
Type: unsigned integer
Description: Handled items

Parameter: cacheMiss
Type: unsigned integer
Description: Miss cached count

5.2.363 MonitoringShutdownAction: MonitoringAction
parent: MonitoringAction

Parameter: runPreHaltOperations
Type: boolean
Description: Run pre-halt operations

Parameter: preHaltOperationTimeout
Type: unsigned integer
5.2 Entities

Description: Run pre-halt operation timeout

5.2.364 MonitoringStorageSubSystemInfo: Entity

parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: name
Type: string
Description: Name

Parameter: elements
Type: unsigned integer
Description: Elements

Parameter: disksize
Type: unsigned integer
Description: Disk size

Parameter: freespace
Type: unsigned integer
Description: Free disk space

Parameter: usage
Type: float
Description: Usage

5.2.365 MonitoringSubSystemInfo: SubSystemInfo

parent: SubSystemInfo

Parameter: storage
Type: list of MonitoringStorageSubSystemInfo
Description: Storage

Parameter: service
Type: list of MonitoringServiceSubSystemInfo
Description: Service

Parameter: plotter
Type: list of MonitoringPlotterSubSystemInfo
Description: Plotter

Parameter: dataCache
Type: list of MonitoringDataCacheSubSystemInfo
Description: DataCache
Parameter: `cache`
Type: list of `MonitoringCacheSubSystemInfo`
Description: Cache

Parameter: `deviceState`
Type: list of `MonitoringDeviceStateSubSystemInfo`
Description: DeviceState

5.2.366 MonitoringTrigger: Entity
parent: Entity

Parameter: `name`
Type: string
Description: Name

Parameter: `disabled`
Type: boolean
Description: Disable

Parameter: `severity`
Type: unsigned integer
Description: Severity

Parameter: `markEntityAsFailed`
Type: boolean
Description: Mark entity as failed

Parameter: `markEntityAsUnknown`
Type: boolean
Description: Mark entity as unknown

Parameter: `stateFlappingPeriod`
Type: float
Description: Time period to check for state flapping

Parameter: `stateFlappingCount`
Type: unsigned integer
Description: Number of times states need to change in the specified period before it is considered stateflapping

Parameter: `expression`
Type: `MonitoringExpression`
Description: Expression

Parameter: `enterActions`
Type: list of references to `MonitoringAction`
Description: Actions to execute when the expression enters ‘true’ state
Parameter: `duringActions`
Type: list of references to `MonitoringAction`
Description: Actions to execute when the expression is and has been 'true'

Parameter: `leaveActions`
Type: list of references to `MonitoringAction`
Description: Actions to execute when the expression is was 'true' and no longer is

Parameter: `stateFlappingActions`
Type: list of references to `MonitoringAction`
Description: Actions to execute when the expression is state flapping

5.2.367 MonitoringTypeExecutionFilter: MonitoringExecutionFilter
parent: MonitoringExecutionFilter

Parameter: `headNode`
Type: boolean
Description: Head node

Parameter: `physicalNode`
Type: boolean
Description: Physical node

Parameter: `cloudNode`
Type: boolean
Description: Cloud node

Parameter: `liteNode`
Type: boolean
Description: Lite node

Parameter: `dpuNode`
Type: boolean
Description: DPU node

5.2.368 MonitoringTypeExecutionMultiplexer: MonitoringExecutionMultiplexer
parent: MonitoringExecutionMultiplexer

Parameter: `types`
Type: list of strings
Description: Types

5.2.369 MonitoringUndrainAction: MonitoringAction
parent: MonitoringAction

5.2.370 MsgQueue: Entity
parent: Entity

Parameter: `ref_node_uuid`
Type: UUID
Description: Node

Parameter: msqid
Type: integer
Description: Message queue ID

Parameter: ipcperm
Type: IPCPerm
Description: IPC permissions

Parameter: size
Type: unsigned integer
Description: Size in bytes

Parameter: qnum
Type: unsigned integer
Description: Number of messages in the queue

5.2.371 NetQSettings: Entity
parent: Entity

Parameter: server
Type: string
Description: NetQ server

Parameter: username
Type: string
Description: Username to use for NetQ API calls

Parameter: password
Type: string
Description: Password to use for NetQ API calls

Parameter: port
Type: unsigned integer
Description: Port

Parameter: verifySSL
Type: boolean
Description: Verify SSL host certificate

5.2.372 Network: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: IPv6
Type: boolean
Description: IPv6 enabled

Parameter: ipv6NetmaskBits
Type: unsigned integer
Description: Netmask or Classless Inter-Domain Routing for IPv6

Parameter: netmaskBits
Type: unsigned integer
Description: Netmask or Classless Inter-Domain Routing

Parameter: ipv6BaseAddress
Type: IP
Description: Base IP address for IPv6

Parameter: baseAddress
Type: IP
Description: Base IP address

Parameter: domainName
Type: string
Description: Domain name

Parameter: type
Type: enum
Description: Type of network, internal: local cluster network, external: connection to outside world, global: unique network across the cloud, tunnel: cloud network, netmap: virtual network used by cloud nodes to connect to nodes inside the cluster

Parameter: mtu
Type: unsigned integer
Description: The maximum transmission unit.

Parameter: bootable
Type: boolean
Description: If set compute nodes can boot using this network

Parameter: dynamicRangeStart
Type: IP
Description: First IP address in the network's dynamic range

Parameter: dynamicRangeEnd
Type: IP
**Description:**  Last IP address in the networks dynamic range

**Parameter:** lockDownDhcpd
**Type:** boolean
**Description:** Don’t respond to dhcp request of new nodes via this network

**Parameter:** management
**Type:** boolean
**Description:** If set, the network can be used as a management network

**Parameter:** gateway
**Type:** IP
**Description:** Gateway

**Parameter:** ipv6Gateway
**Type:** IP
**Description:** IPv6 Gateway

**Parameter:** notes
**Type:** string
**Description:** Administrator notes

**Parameter:** cloudSubnetID
**Type:** string
**Description:** The Cloud ID of the subnet

**Parameter:** EC2AvailabilityZone
**Type:** string
**Description:** The AWS availability zone inside which the subnet exists

**Parameter:** allowAutosign
**Type:** enum
**Description:** Specify if certificate request from node installers can be signed automatically

**Parameter:** generateDNSZone
**Type:** enum
**Description:** Specify which DNS zones should be written

**Parameter:** excludeFromSearchDomain
**Type:** boolean
**Description:** Exclude from search domain in /etc/resolv.conf file

**Parameter:** searchDomainIndex
**Type:** unsigned integer
**Description:** Search domain index in /etc/resolv.conf file, set to 0 for automatic

**Parameter:** disableAutomaticExports
5.2 Entities

Type: boolean
Description: Disable creation of automatic filesystem exports

5.2.373 NetworkAliasInterface: NetworkInterface
parent: NetworkInterface

5.2.374 NetworkBmcInterface: NetworkInterface
parent: NetworkInterface

Parameter: gateway
Type: IP
Description: Gateway IP address, usually the head node’s IP on the BMC network.

Parameter: vlanid
Type: unsigned integer
Description: VLAN ID setting for the BMC card. When set to 0, VLAN capabilities are disabled.

Parameter: lanchannel
Type: unsigned integer
Description: LAN channel for BMC interface

5.2.375 NetworkBondInterface: NetworkInterface
parent: NetworkInterface

Parameter: mode
Type: integer
Description: Bonding mode, see bonding.txt in the kernel documentation.

Parameter: options
Type: string
Description: Options to pass to the bonding driver, see kernel documentation.

Parameter: interfaces
Type: list of strings
Description: List of interfaces which should be channel-bonded.

5.2.376 NetworkBridgeInterface: NetworkInterface
parent: NetworkInterface

Parameter: stp
Type: boolean
Description: Spanning Tree Protocol enabled.

Parameter: forward_delay
Type: unsigned integer
Description: Frame forward delay (in seconds)

Parameter: interfaces
Type: list of strings
**Description**: List of interfaces which should be bridged.

**5.2.377 NetworkConnection: Entity**

*parent*: Entity

Parameter: `ref_node_uuid`
Type: UUID
Description: Node

Parameter: `source`
Type: IP
Description: The source IP address

Parameter: `sourcePort`
Type: unsigned integer
Description: The source port

Parameter: `destination`
Type: IP
Description: The destination IP address

Parameter: `destinationPort`
Type: unsigned integer
Description: The destination port

Parameter: `type`
Type: enum
Description: The connection type

Parameter: `state`
Type: enum
Description: The connection state

**5.2.378 NetworkInterface: Entity**

*parent*: Entity

Parameter: `name`
Type: string
Description: The network interface device name

Parameter: `ip`
Type: IP
Description: The interfaces IP address

Parameter: `ipv6Ip`
Type: IP
Description: The interfaces IPv6 IP address
Parameter: dhcp
Type: boolean
Description: Get the ip via DHCP, leave ip blank

Parameter: ipv6Dhcp
Type: boolean
Description: Get the IPv6 IP via DHCP, leave IPv6IP blank

Parameter: bringupDuringInstall
Type: enum
Description: Brings up interface during install if on

Parameter: network
Type: reference to Network or None
Description: Network the interface is connected to

Parameter: alternativeHostname
Type: string
Description: An alternative hostname to use if this is second (startif != always) IP address on the same network

Parameter: additionalHostnames
Type: list of strings
Description: List of additional hostnames that should resolve to the interfaces IP address

Parameter: startIf
Type: enum
Description: Only run this service in the specified state

Parameter: onNetworkPriority
Type: unsigned integer
Description: Priority of DNS resolution queries for the interface on its network

Parameter: connectedMode
Type: boolean
Description: IB connected mode

Parameter: switchPorts
Type: list of SwitchPort
Description: Switch ports

5.2.379 NetworkNetMapInterface: NetworkInterface
parent: NetworkInterface

5.2.380 NetworkPhysicalInterface: NetworkInterface
parent: NetworkInterface

Parameter: mac
Type: MAC
Description: The interfaces MAC address

Parameter: speed
Type: string
Description: The interfaces network speed.

Parameter: cardtype
Type: string
Description: The type of network interface.

5.2.381 NetworkTunnelInterface: NetworkInterface
parent: NetworkInterface

5.2.382 NetworkVLANInterface: NetworkInterface
parent: NetworkInterface

Parameter: reorder_hdr
Type: boolean
Description: When set to true the VLAN device will move the ethernet header around to make it look exactly like a real ethernet device.

5.2.383 NewNode: Entity
parent: Entity

Parameter: switchPort
Type: SwitchPort or None
Description: Switch port the new node is connected to

Parameter: mac
Type: MAC
Description: MAC address of the new node

Parameter: type
Type: enum
Description: Type of device

Parameter: firstSeen
Type: unsigned integer
Description: Uptime when the new node was first seen

Parameter: lastSeen
Type: unsigned integer
Description: Uptime when the new node was last seen

Parameter: count
Type: unsigned integer
Description: Number of times the node was reported as new
Parameter: stop
Type: boolean
Description: Force the request to stop

Parameter: info
Type: string
Description: Free text information string passed by node-installer

Parameter: appeared
Type: timestamp
Description: Timestamp when the new node first appeared

5.2.384 NginxReverseProxy: Entity
parent: Entity

Parameter: port
Type: unsigned integer
Description: Port

Parameter: address
Type: IP
Description: Destination Network Address

Parameter: node
Type: reference to Node
Description: Destination hostname(only for nodes)

Parameter: destport
Type: unsigned integer
Description: Port

Parameter: description
Type: string
Description: Description

5.2.385 NginxRole: BaseNginxRole
parent: BaseNginxRole

Parameter: nginxReverseProxy
Type: list of NginxReverseProxy
Description: Nginx Reverse Proxy Configuration

5.2.386 Node: Device
parent: Device

Parameter: cmdaemonUrl
Type: string
Description: none
Parameter: interfaces
Type: list of NetworkInterface
Description: IP on the management network

Parameter: provisioningInterface
Type: NetworkInterface
Description: Network interface on which the node will receive software image updates

Parameter: fsmounts
Type: list of FSMount
Description: Configure the entries placed in /etc/fstab

Parameter: fseexports
Type: list of FSExport
Description: Configure the entries placed in /etc/exports

Parameter: staticRoutes
Type: list of StaticRoute
Description: Configure static routes for the interfaces

Parameter: roles
Type: list of Role
Description: Assign the roles the node should play

Parameter: services
Type: list of OSServiceConfig
Description: Manage operating system services

Parameter: pxelabel
Type: string
Description: PXE Label to be displayed when this node boots

Parameter: customRemoteConsoleScript
Type: string
Description: Script that will be used to remote console a device

Parameter: customRemoteConsoleScriptArgument
Type: string
Description: Argument for the custom remote console script

Parameter: provisioningTransport
Type: enum
Description: Defines what transport protocol should be used for provisioning. Options are RSYNC-SSH or RSYNCDAEMON. The latter is the default, is a bit less secure but faster.

Parameter: gpuSettings
Type: list of GPUSettings
Description: Configure the GPUs

Parameter: excludeListManipulateScript
Type: string
Description: A user defined script that can be used to do custom last minute changes to the exclude lists used by cmdaemon to rsync

Parameter: ioScheduler
Type: string
Description: The I/O scheduler for the disks

Parameter: useExclusivelyFor
Type: string
Description: Use node exclusively for desired function: stop all other services

Parameter: disableFabricNVME
Type: boolean
Description: Disable fabric NVME

Parameter: bmcSettings
Type: BMCSettings or None
Description: Configure the baseboard management controller settings

Parameter: selinuxSettings
Type: SELinuxSettings or None
Description: Configure the SELinux settings

Parameter: proxySettings
Type: ProxySettings or None
Description: Configure the proxy server settings

Parameter: versionConfigFiles
Type: boolean
Description: Keep old versions of all config files for this node

Parameter: forceFullEnvironment
Type: boolean
Description: Force this node to create the environment for all nodes

Parameter: biosSetup
Type: free JSON object
Description: BIOS setup

Parameter: timeZoneSettings
Type: TimeZoneSettings or None
Description: Time zone
5.2.387 NodeGroup: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: nodes
Type: list of references to Node
Description: List of nodes belonging to this group

5.2.388 NodeHierarchyResult: Entity
parent: Entity

Parameter: responsibility
Type: enum
Description: Responsibility

Parameter: nodes
Type: list of unsigned numbers
Description: Node

Parameter: rules
Type: list of unsigned numbers
Description: Rules from which nodes were derived

Parameter: responsible
Type: list of unsigned numbers
Description: List of nodes that are responsible for the node

5.2.389 NodeHierarchyRule: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: description
Type: string
Description: description

Parameter: disabled
Type: boolean
Description: Disabled

Parameter: priority
Type: unsigned integer
5.2 Entities

Description: Priority

Parameter: allowSelf
Type: boolean
Description: Allow node to serve itself

Parameter: locationMatch
Type: boolean
Description: Source and target node locations need to match

Parameter: sources
Type: list of NodeHierarchyRuleSelection
Description: Source selection

Parameter: targets
Type: list of NodeHierarchyRuleSelection
Description: Target selection

Parameter: director
Type: boolean
Description: Director

Parameter: dhcp
Type: boolean
Description: DHCP

Parameter: dns
Type: boolean
Description: DNS

Parameter: ntp
Type: boolean
Description: NTP

Parameter: vpn
Type: boolean
Description: VPN

Parameter: rsyslog
Type: boolean
Description: rsyslog

Parameter: ldap
Type: boolean
Description: LDAP

Parameter: bios
Type: boolean
Description: BIOS

Parameter: provisioning
Type: boolean
Description: Provisioning

Parameter: mount
Type: boolean
Description: Mount

Parameter: sshProxy
Type: boolean
Description: SSH proxy

Parameter: cmdaemonConfiguration
Type: boolean
Description: Configuration

Parameter: cmdaemonRpcForward
Type: boolean
Description: RPC forward

Parameter: cmdaemonEvents
Type: boolean
Description: Events

Parameter: cmdaemonStatus
Type: boolean
Description: Status

Parameter: cmdaemonWebSocket
Type: boolean
Description: Web socket for lite nodes

Parameter: monitoringOffload
Type: boolean
Description: Monitoring offload

Parameter: distribution
Type: enum
Description: Distribution

5.2.390 NodeHierarchyRuleCategorySelection: NodeHierarchyRuleSelection
parent: NodeHierarchyRuleSelection

Parameter: categories
Type: list of references to Category
5.2 Entities

Description: List of categories

5.2.391 NodeHierarchyRuleCloudRegionSelection: NodeHierarchyRuleSelection
parent: NodeHierarchyRuleSelection

Parameter: regions
Type: list of references to CloudRegion
Description: List of regions

5.2.392 NodeHierarchyRuleDeviceSelection: NodeHierarchyRuleSelection
parent: NodeHierarchyRuleSelection

Parameter: devices
Type: list of references to Device
Description: List of devices

5.2.393 NodeHierarchyRuleEdgeSiteSelection: NodeHierarchyRuleSelection
parent: NodeHierarchyRuleSelection

Parameter: edgesites
Type: list of references to EdgeSite
Description: List of edgesites

5.2.394 NodeHierarchyRuleNodeGroupSelection: NodeHierarchyRuleSelection
parent: NodeHierarchyRuleSelection

Parameter: nodegroups
Type: list of references to NodeGroup
Description: List of nodegroups

5.2.395 NodeHierarchyRuleNodeSelection: NodeHierarchyRuleSelection
parent: NodeHierarchyRuleSelection

Parameter: nodes
Type: list of references to Node
Description: List of nodes

5.2.396 NodeHierarchyRuleRackSelection: NodeHierarchyRuleSelection
parent: NodeHierarchyRuleSelection

Parameter: racks
Type: list of references to Rack
Description: List of racks

5.2.397 NodeHierarchyRuleRoleSelection: NodeHierarchyRuleSelection
parent: NodeHierarchyRuleSelection

Parameter: edgeDirector
Type: boolean
Description: Edge director
Parameter: cloudDirector
Type: boolean
Description: Cloud director

Parameter: boot
Type: boolean
Description: Boot

Parameter: provisioning
Type: boolean
Description: Provisioning

Parameter: dns
Type: boolean
Description: DNS

Parameter: ldap
Type: boolean
Description: LDAP

Parameter: monitoring
Type: boolean
Description: Monitoring

5.2.398 NodeHierarchyRuleSelection: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: operation
Type: enum
Description: Operation

5.2.399 NodeHierarchyRuleTypeSelection: NodeHierarchyRuleSelection
parent: NodeHierarchyRuleSelection

Parameter: headNode
Type: boolean
Description: Head node

Parameter: physicalNode
Type: boolean
Description: Physical node

Parameter: cloudNode
Type: boolean
Description: Cloud node

Parameter: liteNode
Type: boolean
Description: Lite node

Parameter: dpuNode
Type: boolean
Description: Lite node

Parameter: networkSwitch
Type: boolean
Description: Network switch

Parameter: fabricSwitch
Type: boolean
Description: Fabric switch

Parameter: fabricResourceBox
Type: boolean
Description: Fabric switch

Parameter: rackSensor
Type: boolean
Description: Rack sensor

Parameter: powerDistributionUnit
Type: boolean
Description: Power distribution unit

Parameter: genericDevice
Type: boolean
Description: Generic device

Parameter: unmanagedNode
Type: boolean
Description: Unmanaged node

Parameter: chassis
Type: boolean
Description: Chassis

5.2.400 NvidiaGPUSettings: GPUSettings
parent: GPUSettings

Parameter: powerLimit
Type: unsigned integer
Description: An upper limit on how much power a GPU can use

Parameter: `eccMode`
Type: enum
Description: Set the ECC mode in which the GPU runs

Parameter: `computeMode`
Type: enum
Description: Set the compute mode in which the GPU runs

Parameter: `clockSyncBoostMode`
Type: enum
Description: Set the clock sync boost among the GPUs in group

Parameter: `multiProcessorClockSpeed`
Type: unsigned integer
Description: Set the streaming multiprocessor clock speed of the GPU

Parameter: `memoryClockSpeed`
Type: unsigned integer
Description: Set the streaming memory clock speed of the GPU

Parameter: `migProfiles`
Type: list of strings
Description: MIG profiles that will be applied to the GPU

---

5.2.401 OCIDisk: Entity
parent: Entity

Parameter: `name`
Type: string
Description: Name of the disk

Parameter: `size`
Type: unsigned integer
Description: Size of the drive

Parameter: `kmsKeyId`
Type: string
Description: The OCID of the Vault service key to assign as the master encryption key for the volume

Parameter: `vpusPerGb`
Type: unsigned integer
Description: The number of volume performance units (VPUs) that will be applied to this volume per GB, representing the Block Volume service's elastic performance options

Parameter: `maxVPUsPerGB`
Type: unsigned integer
Description: This will be the maximum VPUs/GB performance level that the volume will be auto-tuned temporarily based on performance monitoring. This parameter has an effect only if performance based autotune is enabled.

Parameter: enablePerformanceBasedAutotune
Type: boolean
Description: If a volume is being throttled at the current setting for a certain period of time, auto-tune will gradually increase the volume’s performance limited up to Maximum VPUs/GB. After the volume has been idle at the current setting for a certain period of time, auto-tune will gradually decrease the volume’s performance limited down to Default/Minimum VPUs/GB.

Parameter: enableDetachedAutotune
Type: boolean
Description: Volume’s performance will be tuned to the lower cost settings once detached.

5.2.402 OCIInstancePool: Entity
parent: Entity

Parameter: name
Type: string
Description: User-defined name of the instance pool.

Parameter: provider
Type: reference to CloudProvider
Description: Cloud provider.

Parameter: region
Type: reference to OCIRegion
Description: Region for instance.

Parameter: isClusterNetwork
Type: boolean
Description: Is instance pool a part of cluster network.

Parameter: instancePoolId
Type: string
Description: Instance pool OCID (generated automatically by default).

Parameter: clusterNetworkId
Type: string
Description: Cluster network OCID (if applicable, generated automatically by default).

5.2.403 OCIPlatformConfig: Entity
parent: Entity

Parameter: platformType
Type: string
Description: The type of platform being configured.
Parameter: isSecureBootEnabled
Type: enum
Description: Whether Secure Boot is enabled on the instance.

Parameter: isTrustedPlatformModuleEnabled
Type: enum
Description: Whether the Trusted Platform Module (TPM) is enabled on the instance.

Parameter: isMeasuredBootEnabled
Type: enum
Description: Whether the Measured Boot feature is enabled on the instance.

Parameter: isMemoryEncryptionEnabled
Type: enum
Description: Whether the instance is a confidential instance.

Parameter: numaNodesPerSocket
Type: string
Description: The number of NUMA nodes per socket (NPS).

Parameter: isSymmetricMultiThreadingEnabled
Type: enum
Description: Whether symmetric multithreading is enabled on the instance. Symmetric multithreading is also called simultaneous multithreading (SMT) or Intel Hyper-Threading. Intel and AMD processors have two hardware execution threads per core (OCPUs). SMT permits multiple independent threads of execution, to better use the resources and increase the efficiency of the CPU. When multithreading is disabled, only one thread is permitted to run on each core, which can provide higher or more predictable performance for some workloads.

Parameter: isAccessControlServiceEnabled
Type: enum
Description: Whether the Access Control Service is enabled on the instance. When enabled, the platform can enforce PCIe device isolation, required for VFIO device pass-through.

Parameter: areVirtualInstructionsEnabled
Type: enum
Description: Whether virtualization instructions are available. For example, Secure Virtual Machine for AMD shapes or VT-x for Intel shapes.

Parameter: isInputOutputMemoryManagementUnitEnabled
Type: enum
Description: Whether the input-output memory management unit is enabled.

Parameter: percentageOfCoresEnabled
Type: unsigned integer
Description: The percentage of cores enabled. Value must be a multiple of 25%. If the requested percentage results in a fractional number of cores, the system rounds up the number of cores across processors and provisions an instance with a whole number of cores. If the applications that you run on the instance use a core-based licensing model and need fewer cores than the full size of the shape, you can disable cores to reduce your licensing costs. The instance itself is billed for the full shape, regardless of whether all cores are enabled.

5.2.404 OCIProvider: CloudProvider
parent: CloudProvider

Parameter: defaultNodeInstallerImageId
Type: string
Description: Default node-installer image, can be overridden in cloudsettings

Parameter: defaultCompartmentId
Type: string
Description: Default compartment ID used, others are listed in https://cloud.oracle.com/identity/compartments.

Parameter: defaultRegion
Type: reference to OCIRegion or None
Description: Default region to start virtual machine in.

Parameter: defaultShape
Type: reference to OCIShape or None
Description: Default cloud node VM shape.

Parameter: APIRegionName
Type: string
Description: OCI region name to be used for listing available regions

Parameter: regions
Type: list of references to OCIRegion
Description: none

Parameter: securityGroupNode
Type: string
Description: Security group ID of the cloud nodes

Parameter: authUser
Type: string
Description: User ocid. Format is ocid1.user.oc1..<unique ID>, can be found in Profile->User Settings

Parameter: authKeyContent
Type: string
Description: API private key file’s content (PEM format) to connect to OCI

Parameter: authFingerprint
Type: string
**Description:** Fingerprint of API Keys. Format is 12:34:56:78:90:ab:cd:ef:12:34:56:78:90:ab:cd:ef, can be found in Identity->Users->User Details->API Keys

**Parameter:** authTenancy
**Type:** string
**Description:** Usually one company will have a single tenancy. Format is ocid1.tenancy.oc1..<unique ID>, can be found in https://cloud.oracle.com/tenancy

**Parameter:** imagesCompartmentId
**Type:** string
**Description:** Compartment OCID to search for custom images

**Parameter:** imagesManifestBaseUrl
**Type:** string
**Description:** Base URL to download images manifests

**5.2.405 OCIRegion: CloudRegion**
**parent:** CloudRegion

**5.2.406 OCISettings: CloudSettings**
**parent:** CloudSettings

**Parameter:** compartmentId
**Type:** string
**Description:** Compartment ID

**Parameter:** availabilityDomain
**Type:** string
**Description:** Availability domain

**Parameter:** instanceId
**Type:** string
**Description:** Instance ID in OCI

**Parameter:** imageId
**Type:** string
**Description:** ID of the image used to create instance (‘latest’: use latest AMI, ‘’: inherit AMI from cloud provider)

**Parameter:** opcus
**Type:** unsigned integer
**Description:** Oracle CPUs. If set to 0 then the default value from the shape will be used

**Parameter:** memory
**Type:** unsigned integer
**Description:** Size of the node’s main memory. If set to 0 then the default value from the shape will be used
5.2 Entities

Parameter: disks
Type: list of OCIDisk
Description: Definitions of storage devices of the VM

Parameter: shape
Type: reference to OCIShape or None
Description: Instance shape

Parameter: region
Type: reference to OCIRegion or None
Description: Region for instance

Parameter: instancePool
Type: reference to OCIInstancePool or None
Description: Instance pool to place the VM in

Parameter: useKernelAndInitrdFromTheSoftwareImage
Type: boolean
Description: Make the cloud node’s node-installer download the kernel and the initrd from the software image configured for this cloud node and then reboot the cloud node to use those, instead of using the kernel and initrd already present on the node-installer’s cloud image.

Parameter: capacityType
Type: enum
Description: Instance capacity type

Parameter: capacityReservationId
Type: string
Description: Capacity Reservation ID

Parameter: platformConfig
Type: OCIPlatformConfig
Description: The platform configuration requested for the instance.

5.2.407 OCIShape: CloudType

parent: CloudType

Parameter: maxVnics
Type: unsigned integer
Description: The maximum number of VNIC attachments available for this shape.

Parameter: networkPorts
Type: unsigned integer
Description: The number of physical network interface card (NIC) ports available for this shape.

Parameter: rdmaPorts
Type: unsigned integer
Description: The number of networking ports available for the remote direct memory access (RDMA) network between nodes in a high performance computing (HPC) cluster network. If the shape does not support cluster networks, this value is 0.

Parameter: isFlexible
Type: boolean
Description: Whether the shape supports creating flexible instances. A flexible shape is a shape that lets you customize the number of OCPUs and the amount of memory when launching or resizing your instance.

Parameter: cpusMin
Type: unsigned integer
Description: The maximum number of OCPUs.

Parameter: cpusMax
Type: unsigned integer
Description: The maximum number of OCPUs.

Parameter: memoryMin
Type: unsigned integer
Description: The minimum amount of memory.

Parameter: memoryMax
Type: unsigned integer
Description: The maximum amount of memory.

Parameter: memoryMinPerCpu
Type: unsigned integer
Description: The minimum amount of memory per OCPU available for this shape.

Parameter: memoryMaxPerCpu
Type: unsigned integer
Description: The maximum amount of memory per OCPU available for this shape.

5.2.408 OpenShiftClientRole: OpenShiftRole
parent: OpenShiftRole

5.2.409 OpenShiftProxyRole: BaseNginxRole
parent: BaseNginxRole

Parameter: unmanagedNodeConfiguration
Type: reference to UnmanagedNodeConfiguration
Description: The unmanaged node configuration this role is linked with.

Parameter: httpPort
Type: unsigned integer
Description: HTTP port to forward as nginx stream.
5.2 Entities

Parameter: httpsPort
Type: unsigned integer
Description: HTTPs port to forward as nginx stream

5.2.410 OpenShiftRole: Role
parent: Role

Parameter: unmanagedNodeConfiguration
Type: reference to UnmanagedNodeConfiguration
Description: The unmanaged nodeconfiguration this role is linked with

5.2.411 OpenShiftWorkerRole: OpenShiftRole
parent: OpenShiftRole

Parameter: containerStoragePath
Type: string
Description: Container storage path

5.2.412 OpenStackIntermediateStorage: CMJobIntermediateStorage
parent: CMJobIntermediateStorage

Parameter: container
Type: string
Description: Container name to place data into

5.2.413 OSCloudDisk: Entity
parent: Entity

Parameter: name
Type: string
Description: Name of the disk

Parameter: bootIndex
Type: integer
Description: Defines the order in which a hypervisor will try devices when attempting to boot the guest from storage. Setting a negative value indicates that the device should not be used for booting

Parameter: size
Type: unsigned integer
Description: Size of the disk

Parameter: diskBus
Type: string
Description: Hypervisor-specific details about disk bus type

Parameter: deviceType
Type: string
Description: Hypervisor-specific details about disk device type
Parameter: removeOnTermination
Type: boolean
Description: If true, the drive will be removed when the instance it is attached to gets terminated

5.2.414 OSXCloudEphemeralDisk: OSXCloudDisk
parent: OSXCloudDisk

Parameter: format
Type: string
Description: Filesystem to format the disk

5.2.415 OSXCloudExtension: Entity
parent: Entity

Parameter: name
Type: string
Description: User-defined name of the private cloud

Parameter: region
Type: reference to OSXCloudRegion
Description: Region of the cluster extension

Parameter: network
Type: reference to Network
Description: Network associated with the extension

Parameter: floatingIpNetworkId
Type: string
Description: Floating IP Network UUID or name

Parameter: stackId
Type: string
Description: Heat stack ID

Parameter: defaultDirectorSecGroupId
Type: string
Description: Default security group ID/name for the cloud director

Parameter: defaultCnodeSecGroupId
Type: string
Description: Default security group ID/name for the cloud nodes

Parameter: extraField
Type: list of strings
Description: A list of various advanced options
5.2.416 OSCloudFlavor: CloudType

**parent**: CloudType

Parameter: id
Type: string
Description: The ID of the flavor

5.2.417 OSCloudProvider: CloudProvider

**parent**: CloudProvider

Parameter: cloudApiType
Type: string
Description: Cloud provider type

Parameter: authUrl
Type: string
Description: Keystone URL

Parameter: username
Type: string
Description: Username

Parameter: password
Type: string
Description: Password

Parameter: projectId
Type: string
Description: Project ID

Parameter: projectName
Type: string
Description: Project Name

Parameter: projectDomainId
Type: string
Description: Project Domain Id

Parameter: userDomainId
Type: string
Description: User Domain Id

Parameter: keyPairName
Type: string
Description: SSH Key Pair Name

Parameter: openStackVersion
Type: string
Description: OpenStack release version (e.g. 2015.1.3)

Parameter: openStackVersionName
Type: string
Description: OpenStack release codename (e.g. Kilo)

Parameter: extensions
Type: list of OSCloudExtension
Description: List of extensions

Parameter: defaultRegion
Type: reference to OSCloudRegion or None
Description: Default region to start instances

Parameter: defaultFlavor
Type: reference to OSCloudFlavor or None
Description: Default cloud node flavor

Parameter: defaultDirectorFlavor
Type: reference to OSCloudFlavor or None
Description: Default cloud director Flavor

Parameter: defaultImage
Type: string
Description: Default node-installer image, can be overridden in the OS disk

5.2.418 OSCloudRegion: CloudRegion
parent: CloudRegion

Parameter: id
Type: string
Description: The ID of the region

5.2.419 OSCloudSettings: CloudSettings
parent: CloudSettings

Parameter: instanceId
Type: string
Description: Unique ID of the instance in OpenStack (the UUID).

Parameter: secGroupId
Type: string
Description: Security group name/ID

Parameter: region
Type: reference to OSCloudRegion or None
Description: The region of the cloud the VM is located in.
5.2 Entities

Parameter: flavor
Type: reference to OSCloudFlavor or None
Description: Instance Flavor (the type of the VM).

Parameter: image
Type: string
Description: The name of the cloud image used for creating the VM.

Parameter: disks
Type: list of OSCloudDisk
Description: Definitions of storage devices of the VM.

Parameter: availabilityZone
Type: string
Description: Availability zone the VM is supposed to be created in. If left empty, the availability zone will be automatically assigned by the cloud.

Parameter: externalIP
Type: IP
Description: The external IP address as set by the cloud provider

Parameter: useKernelAndInitrdFromTheSoftwareImage
Type: boolean
Description: Make the cloud node’s node-installer download the kernel and the initrd from the software image configured for this cloud node and then reboot the cloud node to use those, instead of using the kernel and initrd already present on the node-installer’s cloud image.

5.2.420 OSCloudSwapDisk: OSCloudDisk
parent: OSCloudDisk

5.2.421 OSCloudVolumeDisk: OSCloudDisk
parent: OSCloudDisk

Parameter: imageId
Type: string
Description: Image ID to use as source for this disk

Parameter: snapshotId
Type: string
Description: Snapshot ID to use as source for this disk

Parameter: volumeId
Type: string
Description: Volume ID to use as source for this disk

5.2.422 OSService: Entity
parent: Entity

Parameter: ref_osservice_config_uuid
Type: UUID
Description: OSServiceConfig

Parameter: name
Type: string
Description: none

Parameter: status
Type: enum
Description: none

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: isRealService
Type: boolean
Description: none

Parameter: sicknessMessage
Type: string
Description: none

5.2.423 OSServiceConfig: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: monitored
Type: boolean
Description: CMDaemon will periodically check if the service is running

Parameter: autostart
Type: boolean
Description: CMDaemon will restart a failed service

Parameter: runIf
Type: enum
Description: Only run this service in the specified state

Parameter: belongsToRole
Type: boolean
Description: Service is initialized as part of an assigned role

Parameter: addFromRole
Type: boolean
5.2 Entities

Description:  

Parameter: fromGenericRole
Type: boolean
Description: none

Parameter: ref_role_uuid
Type: UUID
Description: none

Parameter: ref_extra_uuid
Type: UUID
Description: none

Parameter: internal
Type: boolean
Description: none

Parameter: serviceType
Type: unsigned integer
Description: none

Parameter: sicknessCheckScript
Type: string
Description: Script for sickness checking (no script means no sickness checks)

Parameter: sicknessCheckScriptTimeout
Type: unsigned integer
Description: Timeout after which the script is killed

Parameter: sicknessCheckInterval
Type: unsigned integer
Description: Sickness checks interval (rounded up to 30s monitoring interval)

Parameter: scriptTimeout
Type: integer
Description: Service operation timeout

5.2.424 Package: Entity
parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: type
Type: enum
Description: Type of package manager

Parameter: path
Type: string
Description: Path

Parameter: name
Type: string
Description: Name

Parameter: version
Type: string
Description: Version

Parameter: release
Type: string
Description: Release

Parameter: arch
Type: string
Description: Version

Parameter: buildDate
Type: timestamp
Description: Build date

Parameter: installDate
Type: timestamp
Description: Install date

Parameter: size
Type: unsigned integer
Description: Size

Parameter: installed
Type: boolean
Description: Installed

5.2.425 Partition: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: clusterName
Type: string
Description: Cluster name

Parameter: clusterReferenceArchitecture
Type: string
Description: Cluster reference architecture

Parameter: primaryHeadNode
Type: reference to HeadNode
Description: Primary head node

Parameter: failover
Type: CMDaemonFailover
Description: Manage failover setup for this cluster

Parameter: timeZoneSettings
Type: TimeZoneSettings or None
Description: Time zone

Parameter: adminEmail
Type: list of strings
Description: Administrator’s email

Parameter: slaveName
Type: string
Description: Default prefix to identify nodes. eg node003 (basename = node)

Parameter: slaveDigits
Type: unsigned integer
Description: Number of digits used to identify nodes. eg node003 (digits = 3)

Parameter: nameServers
Type: list of signed numbers
Description: Name servers

Parameter: nameServersFromDhcp
Type: list of signed numbers
Description: Name servers provided by DHCP, edit the name servers property instead

Parameter: timeServers
Type: list of strings
Description: NTP time servers

Parameter: searchDomains
Type: list of strings
Description: DNS search domains

Parameter: externallyVisibleIp
Type: IP
Description: IP that external sites see when headnode connects

Parameter: externalNetwork
Type: reference to Network
Description: External network

Parameter: defaultCategory
Type: reference to Category
Description: Default category for new nodes

Parameter: archOS
Type: list of ArchOS
Description: Architecture operating system

Parameter: burnConfigs
Type: list of BurnConfig
Description: Burn configurations

Parameter: failoverGroups
Type: list of CMDaemonFailoverGroup
Description: Failover group configurations

Parameter: resourcePools
Type: list of ResourcePool
Description: Resource pools

Parameter: defaultBurnConfig
Type: BurnConfig
Description: Default burn configuration

Parameter: bmcSettings
Type: BMCSettings or None
Description: Configure the baseboard management controller settings

Parameter: snmpSettings
Type: SNMPSettings or None
Description: Configure the cluster wide SNMP settings

Parameter: dpuSettings
Type: DPUSettings or None
Description: Configure the DPU settings

Parameter: ztpSettings
Type: ZTPSettings or None
Description: Configure the ZTP settings
Parameter: ztpNewSwitchSettings
Type: ZTPNewSwitchSettings or None
Description: Configure the ZTP settings

Parameter: selinuxSettings
Type: SELinuxSettings or None
Description: Configure the SELinux settings

Parameter: accessSettings
Type: AccessSettings or None
Description: Configure the cluster wide Access settings

Parameter: netQSettings
Type: NetQSettings or None
Description: Configure NetQ settings

Parameter: managementNetwork
Type: reference to Network
Description: Determines what network should be used for management traffic.

Parameter: notes
Type: string
Description: Administrator notes

Parameter: provisioningSettings
Type: ProvisioningSettings
Description: Configure the provisioning settings

Parameter: relayHost
Type: string
Description: SMTP mail relay host

Parameter: noZeroConf
Type: boolean
Description: Add nozeroconf to network configuration

Parameter: proxySettings
Type: ProxySettings or None
Description: Configure the proxy server settings

Parameter: fabricConfigurations
Type: list of FabricConfiguration
Description: Cluster wide fabric configuration

Parameter: autosign
Type: enum
Description: Sign certificates for node installer request according to network settings.

5.2.426 PBSJob: Job
parent: Job

5.2.427 PBSJobQueue: JobQueue
parent: JobQueue

Parameter: queueType
Type: enum
Description: Pbs Pro queue type

Parameter: fromRouteOnly
Type: boolean
Description: Receive jobs from route queues only

Parameter: routeHeldJobs
Type: boolean
Description: Specifies whether jobs in the held state can be routed from this queue

Parameter: routeWaitingJobs
Type: boolean
Description: Specifies whether jobs whose execution_time attribute value is in the future can be routed from this queue

Parameter: routeLifetime
Type: unsigned integer
Description: The maximum time a job is allowed to reside in a routing queue

Parameter: routeRetryTime
Type: unsigned integer
Description: Route retry time in routing queue

Parameter: routes
Type: list of strings
Description: Route of queue path (route_destination parameter in qmgr)

Parameter: defaultQueue
Type: boolean
Description: Specifies the queue which is to accept jobs when no queue is requested

Parameter: minWalltime
Type: string
Description: Minimum runtime of jobs running in a queue

Parameter: maxWalltime
Type: string
5.2 Entities

Description: Maximum runtime of jobs running in a queue

Parameter: defaultWalltime
Type: string
Description: Default maximum runtime of jobs running in a queue

Parameter: maxQueued
Type: unsigned integer
Description: Maximum number allowed to reside in a queue at any given time (0 is the same as infinite)

Parameter: maxRunning
Type: unsigned integer
Description: Maximum number of jobs allowed to run at any given time (0 is the same as infinite)

Parameter: priority
Type: integer
Description: Priority of a queue against other queues of the same type [-1024; 1024]

Parameter: enabled
Type: boolean
Description: When true, a queue will accept new jobs; when false, a queue is disabled and will not accept jobs

Parameter: started
Type: boolean
Description: Jobs may be scheduled for execution from this queue; when false, a queue is considered stopped

Parameter: aclHostEnable
Type: boolean
Description: When true directs the server to use the acl_hosts access list for the named queue

5.2.428 PBSJobQueueStat: JobQueueStat
parent: JobQueueStat

Parameter: held
Type: unsigned integer
Description: Held jobs

Parameter: waiting
Type: unsigned integer
Description: Waiting jobs

5.2.429 PbsPelog: Entity
parent: Entity

Parameter: enabled
Type: boolean
Description: Enable hook

Parameter: name
Type: string
Description: Hook name in PBS

Parameter: events
Type: list of strings
Description: List of hook events

Parameter: path
Type: string
Description: Fully qualified pathname of a hook script

Parameter: defaultAction
Type: enum
Description: PBS prolog/epilog default action

Parameter: enableParallel
Type: boolean
Description: Enable parallel prologues/epilogues that run on sister moms

Parameter: verboseUserOutput
Type: boolean
Description: Provide verbose hook output to the user’s .o/.e file

Parameter: torqueCompatible
Type: boolean
Description: Make torque compatible

Parameter: order
Type: unsigned integer
Description: Hook order

Parameter: alarm
Type: unsigned integer
Description: Hook alarm time (timeout)

Parameter: debug
Type: boolean
Description: Enable hook debug (in PBS)

5.2.430 PbsProCgroupsSettings: WlmCgroupsSettings
parent: WlmCgroupsSettings

Parameter: jobCgroupTemplate
Type: string
Description:  Template for job cgroup path ($ESCAPE_JOBID will be replaced by systemd-escape of job id)

Parameter:  cgroupPrefix
Type:  string
Description:  Cgroup prefix that used by PBS when the cgroup is created

Parameter:  enabled
Type:  boolean
Description:  When set the cgroups hook is enabled (in the hook config: enabled)

Parameter:  nvidiaSmi
Type:  string
Description:  The location of the nvidia-smi command (in the hook config: nvidia-smi)

Parameter:  killTimeout
Type:  unsigned integer
Description:  Maximum number of seconds the hook spends attempting to kill job processes before destroying cgroups (in the hook config: kill_timeout)

Parameter:  serverTimeout
Type:  unsigned integer
Description:  Maximum number of seconds the hook spends attempting to fetch node info from the server (in the hook config: server_timeout)

Parameter:  useHyperthreads
Type:  boolean
Description:  All CPU threads are made available to jobs (in the hook config: use_hyperthreads)

Parameter:  ncpusAreCores
Type:  boolean
Description:  ncpus of a vnode is the number of cores, and the hook assigns all threads of each core to a job (in the hook config: ncpus_are_cores)

Parameter:  cpuacctEnabled
Type:  boolean
Description:  Enable cpuacct cgroup controller for jobs

Parameter:  cpusetEnabled
Type:  boolean
Description:  Enable cpuset cgroup controller for jobs

Parameter:  devicesEnabled
Type:  boolean
Description:  Enable devices cgroup controller for jobs

Parameter:  devicesAllow
Type: list of strings
Description: Parameter specifies how access to devices will be controlled

Parameter: hugetlbEnabled
Type: boolean
Description: Enable hugetlb cgroup controller for jobs

Parameter: hugetlbDefault
Type: unsigned integer
Description: The amount of huge page memory assigned to the cgroup when the job does not request hpmem

Parameter: hugetlbReservePercent
Type: unsigned integer
Description: The percentage of available huge page memory (hpmem) that is not to be assigned to jobs

Parameter: hugetlbReserveAmount
Type: unsigned integer
Description: An amount of available huge page memory (hpmem) that is not to be assigned to jobs

Parameter: memoryEnabled
Type: boolean
Description: Enable memory cgroup controller for jobs

Parameter: memorySoftLimit
Type: boolean
Description: If false PBS uses hard memory limits which prevent the processes from ever exceeding their requested memory usage

Parameter: memoryDefault
Type: unsigned integer
Description: Amount of memory assigned to the job if it doesn’t request any memory

Parameter: memoryReservePercent
Type: unsigned integer
Description: The percentage of available physical memory that is not to be assigned to jobs

Parameter: memoryReserveAmount
Type: unsigned integer
Description: A specific amount of available physical memory that is not to be assigned to jobs

Parameter: memswEnabled
Type: boolean
Description: Enable memsw cgroup controller for jobs

Parameter: memswDefault
Type: unsigned integer
5.2 Entities

Description: Specifies the amount of memory + swap assigned to the job if it doesn’t request any memory

Parameter: memswReservePercent
Type: unsigned integer
Description: Percentage of available swap that is not to be assigned to jobs

Parameter: memswReserveAmount
Type: unsigned integer
Description: An amount of available swap that is not to be assigned to jobs

5.2.431 PbsProClientRole: PbsProRole
parent: PbsProRole

Parameter: slots
Type: string
Description: Number of slots available on this node/category

Parameter: queues
Type: list of references to PbsProJobQueue
Description: Queues this node/nodes in this category belongs to

Parameter: allQueues
Type: boolean
Description: When set, the role will provide all available queues. (The queues property will then be ignored.)

Parameter: gpus
Type: unsigned integer
Description: Number of gpus

Parameter: gpuDevices
Type: list of strings
Description: /dev/* available to workload management

Parameter: properties
Type: list of strings
Description: Node properties (a ‘pnames’ node attribute)

Parameter: IMEX
Type: boolean
Description: Start IMEX daemon from prolog/epilog

Parameter: momSettings
Type: PbsProMomSettings
Description: Submode containing pbs_mom daemon settings

Parameter: commSettings
Type: PbsProCommSettings
Description: Submode containing pbs_comm settings

Parameter: nodeCustomizations
Type: list of WlmNodeCustomizationEntry
Description: PBS Pro node custom properties

5.2.432 PbsProCommSettings: Entity
parent: Entity

Parameter: commRouters
Type: list of strings
Description: Tells a pbs_comm where to find its fellow communication daemons (PBS_COMM_ROUTERS parameter in pbs.conf)

Parameter: commThreads
Type: unsigned integer
Description: Tells pbs_comm how many threads to start (PBS_COMM_THREADS parameter in pbs.conf)

Parameter: startComm
Type: boolean
Description: Configure pbs_com daemon start (PBS_START_COMM parameter in pbs.conf)

5.2.433 PbsProJob: PBSJob
parent: PBSJob

5.2.434 PbsProJobQueue: PBSJobQueue
parent: PBSJobQueue

5.2.435 PbsProJobQueueStat: PBSJobQueueStat
parent: PBSJobQueueStat

5.2.436 PbsProMomSettings: Entity
parent: Entity

Parameter: outputHostname
Type: string
Description: Host to which all job standard output and standard error are delivered (PBS_OUTPUT_HOST_NAME parameter in pbs.conf)

Parameter: leafRouters
Type: list of strings
Description: Location of endpoint’s pbs_comm daemon (PBS_LEAF_ROUTERS parameter in pbs.conf)

Parameter: leafName
Type: string
Description: Leaf name (PBS_LEAF_NAME parameter in pbs.conf)

Parameter: leafManagementFqdn
5.2 Entities

Type: boolean
Description: Leaf name in pbs.conf is appended with FQDN from management network

Parameter: startMom
Type: boolean
Description: Configure pbs_mom daemon start (PBS_START_MOM parameter in pbs.conf)

Parameter: spool
Type: string
Description: PBS Pro mom spool directory

5.2.437 PbsProRole: Role
parent: Role

Parameter: wlmCluster
Type: reference to PbsProWlmCluster
Description: WLM cluster link to this WLM role

5.2.438 PbsProServerRole: PbsProRole
parent: PbsProRole

Parameter: externalServer
Type: boolean
Description: PBS Pro server daemons are running on some external machine

Parameter: commSettings
Type: PbsProCommSettings
Description: Submode containing pbs_comm settings

5.2.439 PbsProSubmitRole: WlmSubmitRole
parent: WlmSubmitRole

Parameter: pbsProWlmClusters
Type: list of references to PbsProWlmCluster
Description: List of PBS Pro clusters which the role belongs to

5.2.440 PbsProWlmCluster: WlmCluster
parent: WlmCluster

Parameter: version
Type: string
Description: Major PBS Pro version

Parameter: placeholders
Type: list of JobQueuePlaceholder
Description: Job queue node placeholders mode

Parameter: cgroups
Type: PbsProCgroupsSettings
Description: Submode containing PBS Pro related cgroups settings

Parameter: pelogs
Type: list of PbsPelog
Description: Submode containing a list of PBS Pro related prolog and epilog (pelog) hook settings

Parameter: enableJobHistory
Type: boolean
Description: Keep all job attribute information in PBS Pro

Parameter: jobHistoryDuration
Type: string
Description: Specifies the length of time that PBS will keep each job's history

Parameter: prefix
Type: string
Description: PBS Pro installation directory

Parameter: spool
Type: string
Description: PBS Pro server spool directory

Parameter: subType
Type: enum
Description: PBS Pro subtype

Parameter: flatUid
Type: boolean
Description: Specifies whether a username at the submission host must be the same as the one at the server host

Parameter: maxRunning
Type: unsigned integer
Description: Maximum number of jobs allowed to run at any given time (0 is the same as infinite)

5.2.441 PDUPort:Entity
parent: Entity

Parameter: pdu
Type: reference to PowerDistributionUnit
Description: Pointer to a power distribution unit

Parameter: prt
Type: unsigned integer
Description: Port number on the power distribution unit
5.2 Entities

5.2.442 **PhysicalNode**: ComputeNode
**parent**: ComputeNode

5.2.443 **PingResult**: Entity
**parent**: Entity

Parameter: source
Type: UUID
Description: Source

Parameter: destination
Type: UUID
Description: Destination

Parameter: result
Type: enum
Description: Result of the ping operation

Parameter: latency
Type: float
Description: Round trip latency

Parameter: sequenceId
Type: unsigned integer
Description: Sequence ID

5.2.444 **PingStatistics**: Entity
**parent**: Entity

Parameter: totalOk
Type: unsigned integer
Description: Total number of pings that returned OK

Parameter: totalError
Type: unsigned integer
Description: Total number of pings that returned error

Parameter: totalFailed
Type: unsigned integer
Description: Total number of pings that returned failed

Parameter: totalTimeout
Type: unsigned integer
Description: Total number of pings that returned timeout

Parameter: totalNoAddress
Type: unsigned integer
Description:  Total number of pings had no address

Parameter:  totalUnreachable
Type:  unsigned integer
Description:  Total number of pings that returned unreachable

Parameter:  total
Type:  unsigned integer
Description:  Total number of pings done

Parameter:  pairInformation
Type:  list of PingStatisticsPairInformation
Description:  Ping pair information statistics

Parameter:  sourceInformation
Type:  list of PingStatisticsSourceInformation
Description:  Ping source information statistics

Parameter:  globalInformation
Type:  PingStatisticsGlobalInformation
Description:  Ping global information statistics

Parameter:  results
Type:  list of PingResult
Description:  Raw ping results

5.2.445  PingStatisticsGlobalInformation: Entity
parent:  Entity

5.2.448 PowerDistributionUnit:Device
parent: Device

Parameter: ip
Type: IP
Description: IP address

Parameter: network
Type: reference to Network or None
Description: Network to which this unit is connected

Parameter: model
Type: string
Description: PowerDistributionUnit model name

Parameter: ports
Type: integer
Description: Number of outlets

Parameter: banks
Type: integer
Description: Number of banks

Parameter: phases
Type: integer
Description: Number of phases

Parameter: snmpSettings
Type: SNMPSettings or None
Description: Configure the cluster wide SNMP settings

Parameter: firmware
Type: string
Description: Firmware revision

Parameter: controlScript
5.2 Entities

Type: string
Description: none

Parameter: controlScriptTimeout
Type: unsigned integer
Description: none

5.2.449 PowerOperation: Entity
parent: Entity

Parameter: devices
Type: list of unsigned integers
Description: Devices

Parameter: pdus
Type: list of unsigned integers
Description: A list of (PDU, port) pairs

Parameter: pdu_ports
Type: list of unsigned integers
Description: A list of (PDU, port) pairs

Parameter: session_uuid
Type: UUID
Description: Session

Parameter: force
Type: boolean
Description: Set to true to also do power operation on closed devices

Parameter: delay
Type: unsigned integer
Description: Delay between sequencial operations in milliseconds

Parameter: deviceDelay
Type: list of unsigned integers
Description: Individual device delay in milliseconds

Parameter: headIndex
Type: unsigned integer
Description: Should be 0

Parameter: operation
Type: enum
Description: Operation to be performed

Parameter: gpus
Type: list of unsigned integers
Description: GPUs

Parameter: retryCount
Type: unsigned integer
Description: Number of times to retry on failure

Parameter: retryDelay
Type: unsigned integer
Description: Delay between consecutive tries in milliseconds

5.2.450 PowerOperationHistory: Entity
parent: Entity

Parameter: ref_device_uuid
Type: UUID
Description: Device

Parameter: executionTime
Type: unsigned integer
Description: Execution time in milliseconds after epoch

Parameter: operation
Type: enum
Description: Operation

Parameter: success
Type: boolean
Description: Success

5.2.451 PowerOperationStatus: Entity
parent: Entity

Parameter: state
Type: enum
Description: State of the operation

Parameter: operation
Type: enum
Description: Operation to be performed

Parameter: executionTime
Type: timestamp
Description: Execution time

Parameter: info
Type: string
Description: Extra information about the power operation
Parameter: retries
Type: unsigned integer
Description: Number of retries

Parameter: devices
Type: list of unsigned numbers
Description: Devices

Parameter: index
Type: list of unsigned numbers
Description: Indexes of power operation

Parameter: gpus
Type: list of unsigned numbers
Description: GPUs

5.2.452 PowerStatus: Entity
parent: Entity

Parameter: device
Type: UUID
Description: Device

Parameter: host
Type: UUID
Description: none

Parameter: powerDistributionUnit
Type: UUID
Description: none

Parameter: gpu
Type: integer
Description: none

Parameter: prt
Type: unsigned integer
Description: none

Parameter: name
Type: string
Description: none

Parameter: state
Type: enum
Description: none

Parameter: msg
Type: string
Description: none

Parameter: extendedMsg
Type: string
Description: none

Parameter: indexes
Type: list of unsigned numbers
Description: none

Parameter: tracker
Type: unsigned integer
Description: none

Parameter: retries
Type: unsigned integer
Description: none

5.2.453 PreJobOutput: Entity
parent: Entity

Parameter: measurable
Type: UUID
Description: none

Parameter: value
Type: float
Description: none

Parameter: output
Type: string
Description: none

Parameter: failed
Type: boolean
Description: none

Parameter: reschedule
Type: boolean
Description: none

5.2.454 PreJobResult: Entity
parent: Entity

Parameter: hostname
Type: string
5.2 Entities

Parameter: node_uuid
Type: UUID
Description: Node

Parameter: output
Type: list of PreJobOutput
Description: none

5.2.455 Process: Entity
parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: pid
Type: integer
Description: Process ID

Parameter: ppid
Type: integer
Description: Parent PID

Parameter: uid
Type: integer
Description: Owner UID

Parameter: gid
Type: integer
Description: Process' group ID

Parameter: state
Type: string
Description: Process' state

Parameter: cmd
Type: string
Description: The command name

Parameter: size
Type: unsigned integer
Description: Virtual memory size

Parameter: rss
Type: unsigned integer
Description: Resident memory size

Parameter: nbthreads
Type: unsigned integer
Description: Number of threads spawned

Parameter: nbfiledescs
Type: unsigned integer
Description: Number of held file descriptors

Parameter: cputime
Type: unsigned integer
Description: CPU time

Parameter: cpuuse
Type: float
Description: CPU usage

Parameter: username
Type: string
Description: Owner name

Parameter: groupname
Type: string
Description: Group name

5.2.456  Processor: Entity
parent: Entity

Parameter: IDs
Type: list of unsigned numbers
Description: ID

Parameter: physicalIDs
Type: list of unsigned numbers
Description: Physical ID

Parameter: coreIDs
Type: list of unsigned numbers
Description: Core ID

Parameter: vendor
Type: string
Description: Vendor

Parameter: model
Type: string
Description: Model

Parameter: cores
Type: unsigned integer
Description: Cores

Parameter: speed
Type: float
Description: Speed

Parameter: cacheSize
Type: unsigned integer
Description: Cache size

Parameter: bogomips
Type: float
Description: Bogomips

5.2.457 Profile: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: tokens
Type: list of strings
Description: Tokens

Parameter: accessServices
Type: list of strings
Description: Services

Parameter: nonuser
Type: boolean
Description: True if profile not assignable to users.

5.2.458 ProgramRunnerInput: Entity
parent: Entity

Parameter: user
Type: string
Description: none

Parameter: startInShell
Type: boolean
Description: none
Parameter: \texttt{cmd}
Type: string
Description: none

Parameter: \texttt{info}
Type: string
Description: none

Parameter: \texttt{args}
Type: list of strings
Description: none

Parameter: \texttt{env}
Type: list of strings
Description: none

Parameter: \texttt{datacin}
Type: string
Description: none

Parameter: \texttt{mergeCoutCerr}
Type: boolean
Description: none

Parameter: \texttt{maxruntime}
Type: unsigned integer
Description: none

Parameter: \texttt{updateinterval}
Type: unsigned integer
Description: none

Parameter: \texttt{priority}
Type: integer
Description: none

Parameter: \texttt{tracker}
Type: UUID
Description: none

Parameter: \texttt{logger}
Type: enum
Description: none

5.2.459 ProgramRunnerKill: Entity
parent: Entity

Parameter: \texttt{node}
5.2 Entities

Type:  UUID
Description:  Node key

Parameter:  running
Type:  integer
Description:  Running

Parameter:  trackers
Type:  list of unsigned numbers
Description:  Trackers

Parameter:  results
Type:  list of signed numbers
Description:  results

5.2.460  ProgramRunnerOutput: Entity

parent: Entity

Parameter:  node
Type:  UUID
Description:  none

Parameter:  datacout
Type:  string
Description:  none

Parameter:  datacerr
Type:  string
Description:  none

Parameter:  exitcode
Type:  integer
Description:  none

Parameter:  signal
Type:  integer
Description:  none

Parameter:  pid
Type:  integer
Description:  none

Parameter:  runtime
Type:  unsigned integer
Description:  none

Parameter:  state
Type:  unsigned integer
Description: none

5.2.461 ProgramRunnerStatus: Entity

parent: Entity

Parameter: startTime
Type: timestamp
Description: none

Parameter: runtime
Type: unsigned integer
Description: none

Parameter: session_uuid
Type: UUID
Description: none

Parameter: running
Type: integer
Description: none

Parameter: unknown
Type: integer
Description: none

Parameter: internal
Type: boolean
Description: none

Parameter: nodes
Type: list of unsigned numbers
Description: none

Parameter: state
Type: list of unsigned numbers
Description: none

Parameter: input
Type: ProgramRunnerInput
Description: none

5.2.462 ProjectManager: Entity

parent: Entity

Parameter: users
Type: list of strings
Description: List of users managed
5.2 Entities

Parameter: accounts
Type: list of strings
Description: List of accounts managed

Parameter: op
Type: enum
Description: Job needs to belong to one of the users and/or accounts

5.2.463 PrometheusQuery: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: alias
Type: string
Description: Alternative name

Parameter: query
Type: string
Description: PromQL Query

Parameter: typeClass
Type: string
Description: Type class, slash(/) separated for levels

Parameter: description
Type: string
Description: Description

Parameter: notes
Type: string
Description: Notes

Parameter: startTime
Type: string
Description: Default query start time

Parameter: endTime
Type: string
Description: Default end start time

Parameter: interval
Type: float
Description: Interval

Parameter: access
Type: enum
Description: User access control

Parameter: unit
Type: string
Description: Unit of measure for the query results

Parameter: price
Type: float
Description: Optional price associated with the query results per unit

Parameter: currency
Type: string
Description: Currency

Parameter: preference
Type: unsigned integer
Description: The query with the highest preference be shown by default

Parameter: drilldown
Type: list of PrometheusQueryDrilldown
Description: Manage the drilldown queries

5.2.464 PrometheusQueryDrilldown: Entity
parent: Entity

Parameter: name
Type: string
Description: The name of the drill down

Parameter: parameters
Type: list of strings
Description: Parameters to be passed to the drill down query

Parameter: query
Type: reference to PrometheusQuery or None
Description: Query to execute

5.2.465 ProvisioningNodeStatus: Entity
parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Provisioning node

Parameter: ref_image_uuids
Type: list of unsigned numbers
5.2 Entities

Description: Software images

Parameter: ref_category_uuids
Type: list of unsigned numbers
Description: Categories

Parameter: ref_nodegroup_uuids
Type: list of unsigned numbers
Description: Node groups

Parameter: ref_rack_uuids
Type: list of unsigned numbers
Description: Racks

Parameter: slotsCapacity
Type: unsigned integer
Description: Number of provisioning requests this node can handle in parallel.

Parameter: slotsUsed
Type: unsigned integer
Description: Number of provisioning requests currently being handled by this node.

Parameter: drained
Type: boolean
Description: Drained and not available for future request

Parameter: upToDate
Type: list of booleans
Description: none

5.2.466 ProvisioningProcessorJob: Entity

parent: Entity

Parameter: job_uuid
Type: UUID
Description: Internal provisioning system job UUID.

Parameter: request_uuid
Type: UUID
Description: Provisioning request UUID.

Parameter: source
Type: reference to Node
Description: Source node.

Parameter: sourcePath
Type: string
**Parameter:** destination
**Type:** reference to Node
**Description:** Path on the source node.

**Parameter:** destinationPath
**Type:** string
**Description:** Path on the destination node.

**Parameter:** isFromNodeInstaller
**Type:** boolean
**Description:** Set if the request came from the node-installer.

**Parameter:** isBackupFromBackup
**Type:** boolean
**Description:** Set if the request came a backup of a backup.

**Parameter:** userName
**Type:** string
**Description:** Rsync username.

**Parameter:** password
**Type:** string
**Description:** Rsync password.

**Parameter:** rsyncdPort
**Type:** unsigned integer
**Description:** Rsync port.

**Parameter:** includelist
**Type:** string
**Description:** Rsync include list.

**Parameter:** excludelist
**Type:** string
**Description:** Rsync exclude list.

**Parameter:** dryrun
**Type:** boolean
**Description:** If set, a dry run will be performed, no data is written.

**Parameter:** syncMode
**Type:** unsigned integer
**Description:** Sync mode.

**Parameter:** state
5.2 Entities

Parameter: errorMessage
Type: string
Description: Error message.

Parameter: errorDetails
Type: string
Description: Error details.

Parameter: fspart
Type: reference to FSPart
Description: FSPart

Parameter: index
Type: unsigned integer
Description: Index

5.2.467 ProvisioningRequestStatus: Entity

Parameter: request_uuids
Type: list of unsigned numbers
Description: Provisioning request UUIDs.

Parameter: sourceNode
Type: UUID
Description: Source node handling the provisioning request.

Parameter: sourcePath
Type: string
Description: Path on the source node.

Parameter: destinationNode
Type: UUID
Description: Destination node for the provisioning request.

Parameter: destinationPath
Type: string
Description: Path on the destination node.

Parameter: dryRun
Type: boolean
Description: In dry-run mode no data is actually written. See provisioning log for results.

Parameter: syncMode
Type: unsigned integer
Description: Sync mode used for the provisioning request.

Parameter: state
Type: unsigned integer
Description: State of the provisioning request.

Parameter: errorMessage
Type: string
Description: Error message.

Parameter: errorDetails
Type: string
Description: Detailed error message.

Parameter: jobFailureCounter
Type: unsigned integer
Description: Number of times the provisioning job has failed.

Parameter: isFromNodeInstaller
Type: boolean
Description: Set if the request came from the node-installer.

Parameter: requesterSessions
Type: list of unsigned numbers
Description: none

Parameter: schedulerInfo
Type: list of strings
Description: Details on how the provisioning request was scheduled.

5.2.468 ProvisioningRole: Role

parent: Role

Parameter: maxProvisioningNodes
Type: unsigned integer
Description: Maximum number of nodes that can be provisioned in parallel

Parameter: loadWeight
Type: float
Description: Load weight factor, higher factor will reduce the virtual load on the node and make it be used less. Value will be set to 1 if defined lower as lower than 1.

Parameter: localImages
Type: list of references to SoftwareImage
Description: List of software images provided from local disk

Parameter: includeRevisionsOfLocalImages
Type: boolean
Description: Include revisions of local images

Parameter: sharedImages
Type: list of references to SoftwareImage
Description: List of software images provided from shared storage

Parameter: allImages
Type: enum
Description: When set, the role will provide all available images. (The images property will then be ignored.)

Parameter: nodegroups
Type: list of references to NodeGroup
Description: List of node groups for which to provide images

Parameter: categories
Type: list of references to Category
Description: List of categories for which to provide images

Parameter: racks
Type: list of references to Rack
Description: List of racks for which to provide images

Parameter: localProvisioning
Type: boolean
Description: Speeds up initial provisioning of cloud directors and cloud provisioning nodes. When enabled, if a software image is used as the rootfs of the provisioning node and is also to be used by that node to provision other cloud nodes, during the initial FULL install that image will be transferred only once to the provisioning node, instead of twice.

5.2.469 ProvisioningSettings: Entity

parent: Entity

Parameter: dirtyAutoUpdateTimeout
Type: unsigned integer
Description: Delay after which a provisioning node is considered out of date and automatically updated when needed (0 to disable automatic updates)

Parameter: autoUpdatePeriod
Type: unsigned integer
Description: Period after which all provisioning nodes are automatically updated (0 to disable automatic updates)

Parameter: noRestartRequiredPeriod
Type: unsigned integer
Description: Period in which a second request doesn’t require a restart of a recently started rsync

Parameter: minimalLoadForOffload
Type: float
Description: Minimal provisioning load on the active head node before which dirty provisioning nodes are updated

Parameter: headNodeLoadMultiplier
Type: float
Description: Load multiplier to reduce the work for the head node and offload more to the provisioning nodes

Parameter: useGNSSLocationData
Type: boolean
Description: Use GNSS location data where available to find and prefer the closest provisioning node

5.2.470 ProvisioningStatus: Entity
parent: Entity

Parameter: provisioningRequestStatusList
Type: list of ProvisioningRequestStatus
Description: none

Parameter: provisioningNodeStatusList
Type: list of ProvisioningNodeStatus
Description: none

5.2.471 ProxySettings: Entity
parent: Entity

Parameter: proxyHttp
Type: string
Description: HTTP proxy address which will be used for the node connections to HTTP resources

Parameter: proxyHttpUser
Type: string
Description: HTTP proxy username for authentication

Parameter: proxyHttpPass
Type: string
Description: HTTP proxy password for authentication

Parameter: proxyHttps
Type: string
Description: HTTPS proxy address which will be used for the node connections to HTTPS resources

Parameter: proxyHttpsUser
Type: string
Description: HTTPS proxy username for authentication

Parameter: proxyHttpsPass
5.2 Entities

**Type:** string
**Description:** HTTPS proxy password for authentication

**Parameter:** `proxyFtp`
**Type:** string
**Description:** FTP proxy address which will be used for the node connections to FTP resources

**Parameter:** `proxyFtpUser`
**Type:** string
**Description:** FTP proxy username for authentication

**Parameter:** `proxyFtpPass`
**Type:** string
**Description:** FTP proxy password for authentication

**Parameter:** `noProxy`
**Type:** list of strings
**Description:** Hosts to be accessed without proxy

### 5.2.472 Rack: Entity

**parent:** Entity

**Parameter:** `name`
**Type:** string
**Description:** Name

**Parameter:** `room`
**Type:** string
**Description:** Name of the room

**Parameter:** `xCoordinate`
**Type:** unsigned integer
**Description:** Position in the room

**Parameter:** `yCoordinate`
**Type:** unsigned integer
**Description:** Position in the room

**Parameter:** `height`
**Type:** unsigned integer
**Description:** Height

**Parameter:** `width`
**Type:** unsigned integer
**Description:** Width

**Parameter:** `depth`
**Type:** unsigned integer
Description: Depth

Parameter: angle
Type: unsigned integer
Description: Angle of the rack, 90 face right, 180 face backwards, 270 face left

Parameter: inverted
Type: boolean
Description: Inverted racks have position 1 at the bottom

Parameter: notes
Type: string
Description: Administrator notes

5.2.473 RackPosition: Entity

Parameter: rack
Type: reference to Rack
Description: Name of the rack in which the device resides

Parameter: position
Type: unsigned integer
Description: Position of the node in the rack, top is 1

Parameter: height
Type: unsigned integer
Description: Height of the node

5.2.474 RackSensor: Device

Parameter: ip
Type: IP
Description: Ip address

Parameter: network
Type: reference to Network or None
Description: Network to which this switch is connected

Parameter: model
Type: string
Description: RackSensor model name

Parameter: sensors
Type: list of Sensor
Description: Sensors in the rackmon kit
5.2 Entities

Parameter: `snmpSettings`
Type: `SNMPSettings` or `None`
Description: Configure the cluster wide SNMP settings

5.2.475 RadosGatewayRole: Role
parent: `Role`

Parameter: `serverRoot`
Type: `string`
Description: Fast CGI server root path

Parameter: `serverSocket`
Type: `string`
Description: Fast CGI server socket

Parameter: `serverPort`
Type: `unsigned integer`
Description: Gateway port

Parameter: `serverScript`
Type: `string`
Description: Fast CGI server script content

Parameter: `module`
Type: `string`
Description: Apache fastcgi module file name

Parameter: `nssDbPath`
Type: `string`
Description: Path to NSS database directory

5.2.476 RemoteNodeInstallerInteraction: Entity
parent: `Entity`

Parameter: `type`
Type: `enum`
Description: Type

Parameter: `node`
Type: `reference to ComputeNode`
Description: The node requesting interaction

Parameter: `description`
Type: `string`
Description: The description of the interaction

Parameter: `message`
Type: `string`
Description: The message send back via the manager

Parameter: payload
Type: string
Description: The resulting payload for the interaction

Parameter: firstSeen
Type: unsigned integer
Description: The first time this interaction was requested

Parameter: lastSeen
Type: unsigned integer
Description: The last time this interaction was requested

Parameter: wasConfirmed
Type: boolean
Description: Whether the interaction has been confirmed

Parameter: wasDenied
Type: boolean
Description: Whether the interaction has been denied (rejected)

Parameter: invalid
Type: boolean
Description: Whether the interaction was found to be invalid

Parameter: force
Type: boolean
Description: Flag to indicate a forced passphrase change

Parameter: reset
Type: boolean
Description: Flag to indicate a custom passphrase should be reset to blank

5.2.477 RemoteSetupExecution: Entity

parent: Entity

Parameter: id
Type: integer
Description: A unique identified of the remote cm-*-setup execution.

Parameter: inputConfig
Type: string
Description: cm-*-setup yaml input configuration file (used with '-c' flag).

Parameter: exitCode
Type: integer
Description: The return exit code from cm-setup (once the execution has been completed.

Parameter: signal
Type: integer
Description: Number identifying the signal which interrupted the execution.

Parameter: datacout
Type: list of strings
Description: Data which was emitted on stdout from cm-*-setup.

5.2.478  ReportQuery: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: query
Type: string
Description: Report query

Parameter: description
Type: string
Description: Description

Parameter: notes
Type: string
Description: Notes

Parameter: interval
Type: float
Description: Interval

5.2.479  ResourcePool: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: nodes
Type: list of references to Node
Description: List of nodes who share the resources

Parameter: configurationOverlay
Type: reference to ConfigurationOverlay
Description: Configuration overlay which defines the nodes that share the resources
Parameter: priority
Type: list of floating point numbers
Description: Distribution priorities for the nodes

Parameter: hostname
Type: string
Description: Hostname all IP resources will point to

Parameter: resources
Type: list of BasicResource
Description: Resources to be divided among the given nodes

Parameter: waitTime
Type: unsigned integer
Description: How long to wait after a node goes down before migrating it’s resources

Parameter: disabled
Type: boolean
Description: Disabled the entire resource pool

Parameter: generateDNSZone
Type: enum
Description: Specify which DNS zones should be written

5.2.480 ResourcePoolStatus: Entity

parent: Entity

Parameter: nodes
Type: list of unsigned numbers
Description: Nodes

Parameter: nodeStatus
Type: list of unsigned numbers
Description: Node status

Parameter: resources
Type: list of unsigned numbers
Description: Resources

Parameter: resourceStatus
Type: list of unsigned numbers
Description: Resource status

Parameter: resourceMessages
Type: list of strings
Description: Resource message
5.2 Entities

5.2.481 Role: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: addServices
Type: boolean
Description: Add services to nodes which belong to this node. Be careful setting this to false.

5.2.482 Route: Entity
parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: destination
Type: IP
Description: The destination network or destination host.

Parameter: gateway
Type: IP
Description: Gateway

Parameter: netmask
Type: IP
Description: The netmask for the destination

Parameter: flags
Type: string
Description: Flags

Parameter: metric
Type: unsigned integer
Description: The ‘distance’ to the target (usually counted in hops)

Parameter: ref
Type: unsigned integer
Description: Number of references to this route

Parameter: use
Type: unsigned integer
Description: Number of lookups for the route

Parameter: interface
Type: string
Description: none

5.2.483 ScaleAdvancedSettings: Entity

parent: Entity

Parameter: debug2
Type: boolean
Description: Print very low level debug messages to the log

Parameter: maxThreads
Type: unsigned integer
Description: Maximum number of threads for sequential operations

Parameter: powerOperationTimeout
Type: unsigned integer
Description: Power Operation Timeout (in seconds)

Parameter: connectionRetryInterval
Type: unsigned integer
Description: Connection to CMDaemon retry interval (in seconds)

Parameter: logFile
Type: string
Description: Path to cm-scale logs file

Parameter: pinQueues
Type: boolean
Description: Pin workload to its queue nodes

Parameter: mixLocations
Type: boolean
Description: Allow to map workload to different locations (for example, cloud and local)

Parameter: failedNodeIsHealthy
Type: boolean
Description: Do not start a new node instead of a failed one

Parameter: azureDiskAccountNodes
Type: unsigned integer
Description: Number of nodes that can share the same Azure disk account

Parameter: azureDiskImageName
Type: string
Description: Image name for Azure disks

Parameter: azureDiskContainerName
Type: string
Description: Container name for Azure disks

Parameter: azureDiskAccountPrefix
Type: string
Description: Prefix for randomly generated Azure disk account names

Parameter: nodeSelection
Type: enum
Description: Type of node selection used by Auto Scaler

Parameter: nodeSelectionUptimePeriod
Type: unsigned integer
Description: Period of time in which Auto Scaler calculates total uptime for the nodes during selection

Parameter: options
Type: list of strings
Description: Additional parameters that will be passed to cm-scale daemon

5.2.484 ScaleDynamicNodesProvider: ScaleResourceProvider

parent: ScaleResourceProvider

Parameter: templateNode
Type: reference to Node
Description: Template node

Parameter: nodeRange
Type: string
Description: Node range

Parameter: networkInterface
Type: string
Description: Which node network interface will be changed on cloning (incremented)

Parameter: startTemplateNode
Type: boolean
Description: Should template node be started automatically

Parameter: stopTemplateNode
Type: boolean
Description: Should template node be stopped automatically

Parameter: removeNodes
Type: boolean
Description: Should nodes be removed from Bright Cluster Manager configuration upon the node termination

Parameter: leaveFailedNodes
Type: boolean
Description: Failed nodes will not be touched in order to allow administrator to investigate why they were failed

Parameter: neverTerminate
Type: unsigned integer
Description: Number of nodes that cm-scale powers off and allows to remain, instead of terminating

Parameter: neverTerminateNodes
Type: list of references to Node
Description: List of particular nodes that cm-scale powers off and allows to remain, instead of terminating

5.2.485 ScaleEngine: Entity
parent: Entity

Parameter: name
Type: string
Description: HPC workload engine name

Parameter: trackers
Type: list of ScaleTracker
Description: Workload trackers

Parameter: workloadsPerNode
Type: unsigned integer
Description: Number of workloads that can be scheduled to the same node at the same time

Parameter: priority
Type: unsigned integer
Description: Workload engine priority

Parameter: ageFactor
Type: float
Description: Fairsharing coefficient for workload age significance

Parameter: engineFactor
Type: float
Description: Fairsharing coefficient for engine priority significance

Parameter: externalPriorityFactor
Type: float
Description: Fairsharing coefficient for external priority significance

Parameter: maxNodes
Type: unsigned integer
Description: Allowed running nodes limit

Parameter: notes
5.2 Entities

**Type:** string
**Description:** Engine related notes

**Parameter:** options
**Type:** list of strings
**Description:** Additional engine related parameters that will be passed to cm-scale daemon

5.2.486 ScaleGenericEngine: ScaleEngine
**parent:** ScaleEngine

5.2.487 ScaleGenericTracker: ScaleTracker
**parent:** ScaleTracker

**Parameter:** handler
**Type:** string
**Description:** Full path to python module that produces workload entities for cm-scale

5.2.488 ScaleHpcEngine: ScaleEngine
**parent:** ScaleEngine

5.2.489 ScaleHpcQueueTracker: ScaleTracker
**parent:** ScaleTracker

**Parameter:** queue
**Type:** string
**Description:** Tracking job queue

5.2.490 ScaleKubeEngine: ScaleEngine
**parent:** ScaleEngine

5.2.491 ScaleKubeNamespaceTracker: ScaleTracker
**parent:** ScaleTracker

**Parameter:** controllerNamespace

**Parameter:** cpuBusyThreshold
**Type:** float
**Description:** CPU load % that defines if node is too busy for new pods

**Parameter:** memoryBusyThreshold
**Type:** float
**Description:** Memory load % that defines if node is too busy for new pods
350 NVIDIA Base Command Manager JSON API

Type: string
Description: Tracking Kubernetes namespace name

Parameter: object
Type: enum
Description: Type of Kubernetes objects to track

5.2.492 ScalePendingWorkload: Entity
parent: Entity

Parameter: workloadId
Type: string
Description: Workload that waits for nodes

Parameter: nodes
Type: list of references to Node
Description: List of managed nodes

5.2.493 ScaleResourceProvider: Entity
parent: Entity

Parameter: name
Type: string
Description: Resource provider name

Parameter: enabled
Type: boolean
Description: Resource provider is currently enabled

Parameter: priority
Type: unsigned integer
Description: Node provider priority

Parameter: wholeTime
Type: unsigned integer
Description: A compute node running time (in minutes) before it is stopped if no workload requires it

Parameter: stoppingAllowancePeriod
Type: unsigned integer
Description: A time (in minutes) just before the end of the wholeTime period prior to which all power off (or terminate) operations must be started

Parameter: keepRunning
Type: string
Description: Nodes that should not be stopped or terminated even if they are unused (range format)

Parameter: extraNodes
5.2 Entities

Type: list of strings
Description: Nodes that should be started before regular nodes

Parameter: extraNodeIdleTime
Type: unsigned integer
Description: Time, in seconds, that extra nodes can remain unused (after this time they are stopped)

Parameter: extraNodeStart
Type: boolean
Description: Automatically start extra node before the first compute node is started

Parameter: extraNodeStop
Type: boolean
Description: Automatically stop extra node after the last compute node stops

Parameter: allocationProlog
Type: string
Description: Script that is executed when a node is allocated to a workload

Parameter: allocationEpilog
Type: string
Description: Script that is executed when a node is deallocated

Parameter: allocationScriptsTimeout
Type: unsigned integer
Description: Allocation scripts timeout in seconds

Parameter: defaultResources
Type: list of strings
Description: List of default resources in format [name=value]

Parameter: shutdownEnabled
Type: boolean
Description: Shutdown nodes instead of just power off, and wait until a set timeout before doing a hard power off

Parameter: shutdownTimeout
Type: unsigned integer
Description: Shutdown timeout before powering off

Parameter: longStartingNodeAction
Type: enum
Description: Action applied to nodes that start for too long

Parameter: longStartingNodeTimeout
Type: unsigned integer
Description: How long Auto Scaler should wait before the action is applied for long starting nodes

Parameter: options
Type: list of strings
Description: Additional resource provider related parameters that will be passed to cm-scale daemon

5.2.494 ScaleServerRole: Role
parent: Role

Parameter: engines
Type: list of ScaleEngine
Description: Submode containing workload engines settings

Parameter: resourceProviders
Type: list of ScaleResourceProvider
Description: List of resource providers

Parameter: dryRun
Type: boolean
Description: Run in dry run mode

Parameter: debug
Type: boolean
Description: Print debug messages to the log

Parameter: runInterval
Type: unsigned integer
Description: Frequency of cm-scale decision making (in seconds)

Parameter: advancedSettings
Type: ScaleAdvancedSettings
Description: Submode containing advanced settings

5.2.495 ScaleStaticNodesProvider: ScaleResourceProvider
parent: ScaleResourceProvider

Parameter: nodes
Type: list of references to Node
Description: List of managed nodes

Parameter: nodegroups
Type: list of references to NodeGroup
Description: List of managed nodegroups

5.2.496 ScaleTracker: Entity
parent: Entity

Parameter: name
Type: string
5.2 Entities

Description: Tracker name

Parameter: enabled
Type: boolean
Description: Tracker is currently enabled or disabled

Parameter: assignCategory
Type: reference to Category or None
Description: Category that should be assigned to managed nodes

Parameter: primaryOverlays
Type: list of references to ConfigurationOverlay
Description: Configuration overlays that managed nodes are added to when they are required by workload

Parameter: allowedResourceProviders
Type: list of strings
Description: Only the specified resource providers will be used for a workload of this tracker (if empty than all allowed)

Parameter: queueLengthThreshold
Type: unsigned integer
Description: Number of pending workloads/jobs that triggers the nodes bursting

Parameter: ageThreshold
Type: unsigned integer
Description: Workload/job pending time threshold that triggers the nodes bursting for this workload (in seconds)

Parameter: workloadsPerNode
Type: unsigned integer
Description: Number of workloads that can be scheduled to the same node at the same time (0 means no limit)

Parameter: options
Type: list of strings
Description: Additional tracker related parameters

5.2.497 SELinuxSettings: Entity

parent: Entity

Parameter: initialize
Type: boolean
Description: Determines whether SELinux is to be initialized by the node installer

Parameter: rebootAfterContextRestore
Type: boolean
Description: This directive determines whether the compute node is to reboot after performing a full filesystem security context restore.

Parameter: allowNFSHomeDirectories
Type: boolean
Description: This directive determines whether to allow using a remote NFS server for the home directories on the node.

Parameter: contextActionAutoInstall
Type: enum
Description: This directive specifies the action which is to be performed by the Node Installer when the node is being installed in the AUTO mode.

Parameter: contextActionFullInstall
Type: enum
Description: This directive specifies the action which is to be performed by the Node Installer when the node is being installed in the FULL mode.

Parameter: contextActionNoSyncInstall
Type: enum
Description: This directive specifies the action which is to be performed by the Node Installer when the node is being installed in the NOSYNC mode.

Parameter: mode
Type: enum
Description: Process policy mode.

Parameter: policy
Type: enum
Description: Process protection policy.

Parameter: keyValueSettings
Type: KeyValueSettings or None
Description: Key value settings which can be used to override SELinux options.

5.2.498 Semaphore: Entity
parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: semid
Type: integer
Description: Semaphore Set ID

Parameter: ipcperm
Type: IPCPerm
Description: IPC permissions

Parameter: nsems
Type: unsigned integer
Description: Number of semaphores in the set

5.2.499 Sensor: Entity
parent: Entity

Parameter: type
Type: enum
Description: Sensor type

Parameter: name
Type: string
Description: Sensor name

Parameter: port
Type: unsigned integer
Description: Sensor port

5.2.500 Session: Entity
parent: Entity

Parameter: eventCounter
Type: unsigned integer
Description: none

Parameter: queuedEventSize
Type: unsigned integer
Description: none

Parameter: clientType
Type: unsigned integer
Description: none

Parameter: acknowledgedKeepAlive
Type: integer
Description: none

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: remoteAddress
Type: IP
Description: none
Parameter: username
Type: string
Description: none

Parameter: group
Type: string
Description: none

5.2.501 SharedMemory: Entity
parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: shmid
Type: integer
Description: Shared memory ID

Parameter: ipcperm
Type: IPCPerm
Description: IPC permissions

Parameter: size
Type: unsigned integer
Description: Size in bytes

Parameter: cpid
Type: integer
Description: Creator PID

Parameter: nattch
Type: integer
Description: Number of attaches

5.2.502 SlurmAccountingRole: Role
parent: Role

Parameter: dbdPort
Type: unsigned integer
Description: The port number that the Slurm Database Daemon (slurmdbd) listens to for work

Parameter: storageHost
Type: string
Description: Defines the name of the host the MySQL database is running where slurmdbd is going to store the data

Parameter: storagePort
5.2 Entities

Type: unsigned integer
Description: The port number that the Slurm Database Daemon (slurmdbd) communicates with the database

Parameter: storageLoc
Type: string
Description: The name of the database as the location where slurmdbd accounting records are written

Parameter: storageUser
Type: string
Description: Defines the name of the user to connect to the MySQL database with to store the job accounting data

Parameter: slurmWlmClusters
Type: list of references to SlurmWlmCluster
Description: List of Slurm clusters which can make use of this SlurmAccountingRole (slurmdbd)

5.2.503 SlurmCgroupsSettings: WlmCgroupsSettings
parent: WlmCgroupsSettings

Parameter: constrainCores
Type: boolean
Description: If true then constrain allowed cores to the subset of allocated resources

Parameter: constrainRAMSpace
Type: boolean
Description: If true then constrain the job’s RAM usage

Parameter: constrainSwapSpace
Type: boolean
Description: If true then constrain the job’s swap space usage

Parameter: constrainDevices
Type: boolean
Description: If true constrain the job’s allowed devices based on GRES allocated resources

Parameter: allowedRamSpace
Type: float
Description: Constrain the job cgroup RAM to this percentage of the allocated memory. If the AllowedRAMSpace limit is exceeded, the job steps will be killed and a warning message will be written to standard error. Also see ConstrainRAMSpace.

Parameter: allowedSwapSpace
Type: float
Description: Constrain the job cgroup swap space to this percentage of the allocated memory

Parameter: maxRAM
Type: float
Description: Set an upper bound of total RAM on the RAM constraint for a job

Parameter: `maxSwap`
Type: `float`
Description: Set an upper bound (of total RAM) on the amount of RAM+Swap that may be used for a job

Parameter: `minRAMSpace`
Type: `unsigned integer`
Description: Set a lower bound on the memory limits defined by AllowedRAMSpace and AllowedSwapSpace

Parameter: `jobCgroupTemplate`
Type: `string`
Description: Template for job cgroup path ($UID will be replaced to user ID, $JOBID will be replaced to job id)

Parameter: `allowedKmemSpace`
Type: `unsigned integer`
Description: Constrain the job cgroup kernel memory to this amount of the allocated memory

Parameter: `constrainKmemSpace`
Type: `boolean`
Description: Specifies if Slurm will constrain the job’s Kmem RAM usage

Parameter: `minKmemSpace`
Type: `unsigned integer`
Description: Set a lower bound on the memory limits defined by AllowedKmemSpace

Parameter: `maxKmem`
Type: `float`
Description: Set an upper bound of total Kmem for a job

Parameter: `memorySwappiness`
Type: `float`
Description: Configure the kernel’s priority for swapping out anonymous pages (such as program data) verses file cache pages for the job cgroup (either ConstrainRAMSpace or ConstrainSwapSpace must be enabled in order for this parameter to be applied)

```
5.2.504 SlurmClientRole: SlurmRole
parent: SlurmRole
```

Parameter: `slots`
Type: `string`
Description: Number of slots available on this node/category (set 0 for default)

Parameter: `queues`
Type: `list of references to SlurmJobQueue`
5.2 Entities

Description: Queues this node/nodes in this category belongs to

Parameter: allQueues
Type: boolean
Description: When set, the role will provide all available queues (the queues property will then be ignored)

Parameter: nodeAddr
Type: string
Description: Name that a node should be referred to in establishing a communications path

Parameter: coresPerSocket
Type: unsigned integer
Description: Number of cores in a single physical processor socket

Parameter: features
Type: list of strings
Description: A list of arbitrary strings indicative of some characteristic associated with the node

Parameter: tcpPort
Type: unsigned integer
Description: The port number that the Slurm compute node daemon, slurmd, listens to for work on this particular node

Parameter: realMemory
Type: unsigned integer
Description: Size of real memory on the node - The value will be truncated to the MiB

Parameter: sockets
Type: unsigned integer
Description: Number of physical processor sockets/chips on the node

Parameter: threadsPerCore
Type: unsigned integer
Description: Number of logical threads in a single physical core

Parameter: tmpDisk
Type: unsigned integer
Description: Total size of temporary disk storage in TmpFS in MegaBytes

Parameter: weight
Type: integer
Description: The priority of the node for scheduling purposes

Parameter: boards
Type: unsigned integer
Description: Number of baseboards in nodes with a baseboard controller

Parameter: socketsPerBoard
Type: unsigned integer
Description: Number of physical processor sockets/chips on a baseboard

Parameter: reason
Type: string
Description: Identifies the reason for a node being in a particular state

Parameter: cpuSpecList
Type: list of strings
Description: A comma delimited list of Slurm abstract CPU IDs on which Slurm compute node daemons (slurmd, slurmstepd) will be confined

Parameter: coreSpecCount
Type: unsigned integer
Description: Number of cores in a single physical processor socket

Parameter: memSpecLimit
Type: unsigned integer
Description: Limit on combined real memory allocation for compute node daemons (slurmd, slurmstepd)

Parameter: autoDetect
Type: enum
Description: Detect NVIDIA (nvml) or AMD (rsmi) or Intel (oneapi) GPUs automatically (per node). GPU configuration is part of Slurm GRES.

Parameter: nodeCustomizations
Type: list of WlmNodeCustomizationEntry
Description: Slurm node custom properties

Parameter: genericResources
Type: list of SlurmGenericResource
Description: Slurm generic resources settings

Parameter: cpuBind
Type: enum
Description: Bindings from task to resources

Parameter: hardwareAutoDetection
Type: boolean
Description: The actual hardware configuration probed by slurmd -C

Parameter: memoryAutoDetectionSlack
Type: float
5.2 Entities

Description: Autodetected memory will be reduced by this percentage when put in slurm.conf

Parameter: IMEX
Type: boolean
Description: Start IMEX daemon from prolog/epilog

5.2.505 SlurmGenericResource: Entity
parent: Entity

Parameter: alias
Type: string
Description: Unique alias name of the generic resource

Parameter: name
Type: string
Description: Name of the generic resource in Slurm

Parameter: count
Type: string
Description: Number of resources of this type available on this node (a suffix K, M, G, T or P may be used to multiply the number by 1024, 1048576, etc. respectively)

Parameter: cores
Type: string
Description: Specify the first thread CPU index numbers for the specific cores which can use this resource (e.g. '0,1,2,3' or '0-3')

Parameter: type
Type: string
Description: An arbitrary string identifying the type of device

Parameter: file
Type: string
Description: Fully qualified pathname of the device files associated with a resource (simple regular expressions are supported)

Parameter: consumable
Type: boolean
Description: Multiple jobs can use the same generic resource

Parameter: addToGresConfig
Type: boolean
Description: Add the generic resource entity to gres.conf

Parameter: Flags
Type: list of strings
Description: Optional flags that can be specified to change configured behavior of the GRES
Parameter: Links
Type: list of unsigned numbers
Description: A list of numbers identifying the number of connections between this device and other devices to allow coscheduling of better connected devices

Parameter: MultipleFiles
Type: list of strings
Description: A list of device file paths (in the range format) associated with the GRES

5.2.506 SlurmJob: Job
parent: Job

5.2.507 SlurmJobQueue: JobQueue
parent: JobQueue

Parameter: allocNodes
Type: string
Description: Comma separated list of nodes from which users can submit jobs in the partition

Parameter: defaultQueue
Type: boolean
Description: Set this as the default queue

Parameter: minNodes
Type: string
Description: Minimal nodes one job has to use

Parameter: maxNodes
Type: string
Description: Maximal nodes one job can use

Parameter: defaultTime
Type: string
Description: Default job runtime

Parameter: maxTime
Type: string
Description: Maximal job runtime

Parameter: priorityJobFactor
Type: integer
Description: Partition factor used by priority/multifactor plugin in calculating job priority

Parameter: priorityTier
Type: integer
Description: Jobs submitted to a partition with a higher priority tier value will be dispatched before pending jobs in partition with lower priority tier value
Parameter: hidden
Type: boolean
Description: Hide from all

Parameter: disableRoot
Type: boolean
Description: Do not allow root to run jobs

Parameter: rootOnly
Type: boolean
Description: Only allow root to run jobs

Parameter: allowGroups
Type: string
Description: Specify user groups which are allowed to run jobs

Parameter: overSubscribe
Type: string
Description: Controls the ability of the partition to execute more than one job at a time on each resource

Parameter: alternate
Type: string
Description: Partition name of alternate partition to be used if the state of this partition is DRAIN or INACTIVE

Parameter: graceTime
Type: unsigned integer
Description: Specifies, in units of seconds, the preemption grace time to be extended to a job which has been selected for preemption

Parameter: defMemPerCPU
Type: string
Description: Default real memory size available per allocated CPU in MegaBytes

Parameter: maxMemPerCPU
Type: string
Description: Maximum real memory size available per allocated CPU in MegaBytes

Parameter: defMemPerNode
Type: string
Description: Default real memory size available per allocated node in MegaBytes

Parameter: maxMemPerNode
Type: string
Description: Maximum real memory size available per allocated node in MegaBytes
Parameter: `preemptMode`
Type: string
Description: Mechanism used to preempt jobs from this partition

Parameter: `reqResv`
Type: string
Description: Specifies users of this partition are required to designate a reservation when submitting a job

Parameter: `SelectTypeParameters`
Type: string
Description: Partition-specific resource allocation type

Parameter: `allowAccounts`
Type: string
Description: Specify accounts which are allowed to run jobs

Parameter: `allowQos`
Type: string
Description: Specify qos which are allowed to run jobs

Parameter: `denyAccounts`
Type: string
Description: Specify accounts which are denied to run jobs

Parameter: `denyQos`
Type: string
Description: Specify qos which are denied to run jobs

Parameter: `lln`
Type: boolean
Description: Schedule resources to jobs on the least loaded nodes

Parameter: `maxCPUsPerNode`
Type: string
Description: Maximum number of CPUs on any node available to all jobs from this partition

Parameter: `tresBillingWeights`
Type: list of strings
Description: Billing weights of each TRES type that will be used in calculating the usage of a job

Parameter: `defMemPerGPU`
Type: string
Description: Default real memory size available per allocated GPU in megabytes

Parameter: `defCpuPerGPU`
Type: string
5.2 Entities

**Description:** Default count of CPUs allocated per allocated GPU

**Parameter:** cpuBind
**Type:** enum
**Description:** How tasks are bound to allocated CPUs

**Parameter:** qos
**Type:** string
**Description:** Used to extend the limits available to a QOS on a partition

**Parameter:** exclusiveUser
**Type:** boolean
**Description:** If set to YES then nodes will be exclusively allocated to users

**Parameter:** ordering
**Type:** integer
**Description:** Positioning of the jobqueue. Smaller values go first in the configuration file.

5.2.508 SlurmJobQueueAccessList: Entity

**parent:** Entity

**Parameter:** wlmCluster
**Type:** reference to WlmCluster
**Description:** WLM cluster link to this job queue access list

**Parameter:** slurmJobQueue
**Type:** list of references to SlurmJobQueue
**Description:** List of queues that can be submitted to. If none is specified, this access list will submit to all job queues in the specified WlmCluster.

5.2.509 SlurmJobQueueStat: JobQueueStat

**parent:** JobQueueStat

**Parameter:** memory
**Type:** string
**Description:** Memory

**Parameter:** cpus
**Type:** unsigned integer
**Description:** CPUs

**Parameter:** total
**Type:** unsigned integer
**Description:** Total nodes

**Parameter:** usable
**Type:** unsigned integer
Description: Usable nodes

Parameter: free
Type: unsigned integer
Description: Free nodes

Parameter: nodeLimit
Type: unsigned integer
Description: Node limit

Parameter: timeLimit
Type: string
Description: Time limit

Parameter: other
Type: string
Description: Other traits

5.2.510 SlurmOCISettings: Entity
parent: Entity

Parameter: containerPath
Type: string
Description: Override path pattern for placement of the generated OCI Container bundle directory.

Parameter: createEnvFile
Type: boolean
Description: Create environment file for container.

Parameter: runTimeCreate
Type: string
Description: Pattern for OCI runtime create operation.

Parameter: runTimeDelete
Type: string
Description: Pattern for OCI runtime delete operation.

Parameter: runTimeKill
Type: string
Description: Pattern for OCI runtime kill operation.

Parameter: runTimeQuery
Type: string
Description: Pattern for OCI runtime query operation.

Parameter: runTimeRun
Type: string
5.2 Entities

Description: Pattern for OCI runtime run operation.

Parameter: runTimeStart
Type: string
Description: Pattern for OCI runtime start operation.

5.2.511 SlurmRole: Role
parent: Role

Parameter: wlmCluster
Type: reference to SlurmWlmCluster
Description: WLM cluster link to this WLM role

5.2.512 SlurmServerRole: SlurmRole
parent: SlurmRole

Parameter: externalServer
Type: boolean
Description: Slurm server daemons are running on some external machine

5.2.513 SlurmSubmitRole: WlmSubmitRole
parent: WlmSubmitRole

Parameter: slurmJobQueueAccessList
Type: list of SlurmJobQueueAccessList
Description: List of slurm clusters and their associated queues that can be submitted to

5.2.514 SlurmWlmCluster: WlmCluster
parent: WlmCluster

Parameter: placeholders
Type: list of JobQueuePlaceholder
Description: Job queue node placeholders mode

Parameter: cgroups
Type: SlurmCgroupsSettings
Description: Submode containing Slurm related cgroups settings

Parameter: powerSavingEnabled
Type: boolean
Description: Enable power saving options into slurm.conf

Parameter: suspendTime
Type: integer
Description: Nodes which remain idle for this number of seconds will be placed into power save mode by SuspendProgram

Parameter: suspendTimeout
Type: unsigned integer
Description: Maximum time permitted (in second) between when a node suspend request is issued and when the node shutdown

Parameter: resumeTimeout
Type: unsigned integer
Description: Maximum time permitted (in second) between when a node is resume request is issued and when the node is actually available for use

Parameter: suspendProgram
Type: string
Description: Program that will be executed when a node remains idle for an extended period of time

Parameter: resumeProgram
Type: string
Description: Program that will be executed when a suspended node is needed by a submitted jobs

Parameter: prologSlurmctld
Type: string
Description: Fully qualified pathname of a program for the slurmctld daemon to execute before granting a new job allocation

Parameter: epilogSlurmctld
Type: string
Description: Fully qualified pathname of a program for the slurmctld to execute upon termination of a job allocation

Parameter: prolog
Type: string
Description: Fully qualified pathname of a program for the slurmd to execute whenever it is asked to run a job step from a new job allocation

Parameter: epilog
Type: string
Description: Fully qualified pathname of a script to execute as user root on every node when a user’s job completes

Parameter: taskProlog
Type: string
Description: Fully qualified pathname of a script to execute prior to launching job step (invoked by slurmstepd).

Parameter: taskEpilog
Type: string
Description: Fully qualified pathname of a script to execute after completion of job step (invoked by slurmstepd).

Parameter: srunProlog
Type: string
5.2 Entities

**Description:** Fully qualified pathname of a script to execute prior to launching job step (invoked by srun).

**Parameter:** `srunEpilog`  
**Type:** string  
**Description:** Fully qualified pathname of a script to execute after completion of job step (invoked by srun).

**Parameter:** `fastSchedule`  
**Type:** unsigned integer  
**Description:** Controls how a node’s configuration specifications in slurm.conf are used.

**Parameter:** `gresTypes`  
**Type:** list of strings  
**Description:** A list of generic resources to be managed.

**Parameter:** `prologEpilogTimeout`  
**Type:** unsigned integer  
**Description:** The interval in seconds Slurm waits for Prolog and Epilog before terminating them (value 0 removes the parameter from slurm.conf).

**Parameter:** `batchStartTimeout`  
**Type:** unsigned integer  
**Description:** The maximum time (in seconds) that a batch job is permitted for launching before being considered missing and releasing the allocation (value 0 removes the parameter from slurm.conf).

**Parameter:** `prefix`  
**Type:** string  
**Description:** Slurm root installation directory.

**Parameter:** `etc`  
**Type:** string  
**Description:** Slurm configuration files directory.

**Parameter:** `stateSave`  
**Type:** string  
**Description:** Directory into which the Slurm controller saves its state.

**Parameter:** `version`  
**Type:** string  
**Description:** Major Slurm version.

**Parameter:** `slurmConfFileTemplate`  
**Type:** string  
**Description:** Template for slurm.conf file.

**Parameter:** `gresConfFileTemplate`
Type: string
Description: Template for gres.conf file

Parameter: autoDetect
Type: enum
Description: Detect NVIDIA (nvml) or AMD (rsmi) or Intel (oneapi) GPUs automatically (global option). GPU configuration is part of Slurm GRES.

Parameter: configureMigs
Type: boolean
Description: Detect and configure MIG profiles as GPU types in Slurm

Parameter: slurmdParameters
Type: list of strings
Description: Parameters specific to the Slurmd

Parameter: scheduler
Type: string
Description: Scheduler to use in combination with slurm

Parameter: schedulerParameters
Type: list of strings
Description: Parameters specific to the scheduler. The interpretation of them varies by SchedulerType

Parameter: slurmctldParameters
Type: list of strings
Description: Parameters specific to the Slurmctld

Parameter: prologFlags
Type: list of strings
Description: Flags to control the prolog behavior

Parameter: selectType
Type: string
Description: The type of resource selection algorithm to be used (slurm: SelectType)

Parameter: selectTypeParameters
Type: list of strings
Description: Parameters specific to Select Type (slurm: SelectTypeParameters)

Parameter: accountingStorageTRES
Type: list of strings
Description: List of resources you wish to track on the cluster (slurm: AccountingStorageTRES)

Parameter: ociSettings
Type: SlurmOCISettings or None
Description: OCI container settings for Slurm

5.2.515 SNMPSettings: Entity

parent: Entity

Parameter: version
Type: enum
Description: Version of SNMP that should be used to read information from the device

Parameter: timeout
Type: float
Description: SNMP timeout, set to 0 for default

Parameter: vlanTimeout
Type: float
Description: SNMP timeout for VLAN calls, set to 0 for default

Parameter: retries
Type: integer
Description: SNMP retries, set to -1 for default

Parameter: readString
Type: string
Description: SNMP read-only community string

Parameter: writeString
Type: string
Description: SNMP read-write community string

Parameter: securityName
Type: string
Description: Security name

Parameter: context
Type: string
Description: none

Parameter: authProtocol
Type: enum
Description: Authentication protocol

Parameter: privProtocol
Type: enum
Description: Privacy protocol

Parameter: authKey
Type: string
**Description**: Authentication key

**Parameter**: privKey
**Type**: string
**Description**: Privacy key

**Parameter**: securityLevel
**Type**: enum
**Description**: Security level

**Parameter**: filename
**Type**: string
**Description**: Filename for SNMP testing

**5.2.516 SnmpTrapRole: Role**

**parent**: Role

**Parameter**: event
**Type**: boolean
**Description**: Enable events

**Parameter**: mail
**Type**: boolean
**Description**: Enable mail

**Parameter**: recipients
**Type**: list of strings
**Description**: Recipients

**Parameter**: allAdministrators
**Type**: boolean
**Description**: Also send e-mail to all administrators as defined in partition

**Parameter**: access
**Type**: string
**Description**: Access string

**Parameter**: server
**Type**: string
**Description**: The SNMP server

**Parameter**: sender
**Type**: string
**Description**: The sender of the e-mail

**Parameter**: arguments
**Type**: list of strings
Description: Additional script arguments

Parameter: alternativeScript
Type: string
Description: Alternative script

5.2.517 SoftwareImage: Entity

parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: path
Type: string
Description: Base directory of the image

Parameter: originalImage
Type: UUID
Description: Image from which this one will be cloned

Parameter: fileOperationInProgress
Type: boolean
Description: none

Parameter: kernelVersion
Type: string
Description: Kernel version used

Parameter: kernelParameters
Type: string
Description: Kernel parameters passed to the kernel at boot time

Parameter: kernelOutputConsole
Type: string
Description: Kernel output console used at boot time

Parameter: creationTime
Type: timestamp
Description: Creation time

Parameter: modules
Type: list of KernelModule
Description: Manage kernel modules loaded in this image

Parameter: enableSOL
Type: boolean
Description: Enable Serial console Over LAN

Parameter: SOLPort
Type: string
Description: Serial port to use for SOL, usually ttyS0 or ttyS1

Parameter: SOLSpeed
Type: string
Description: Baud rate to use for SOL

Parameter: SOLFlowControl
Type: boolean
Description: Enable to use hardware flow control for SOL

Parameter: notes
Type: string
Description: Administrator notes

Parameter: fspart
Type: reference to FSPart or None
Description: Internal pointer to the FSPart associated with this image

Parameter: bootfspart
Type: reference to FSPart or None
Description: Internal pointer to the FSPart associated with the boot directory of this image

Parameter: revisionID
Type: integer
Description: none

Parameter: parentSoftwareImage
Type: reference to SoftwareImage or None
Description: none

Parameter: revisionHistory
Type: list of SoftwareImageRevisionInfo
Description: none

5.2.518 SoftwareImageFileSelection: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: patterns
Type: list of strings
Description: Patterns to be included

Parameter: watch
Type: boolean
Description: Watch files with inotify

5.2.519 SoftwareImageProxy: Entity
parent: Entity

Parameter: parentSoftwareImage
Type: reference to SoftwareImage
Description: Parent software image

Parameter: revisionID
Type: integer
Description: Revision ID

5.2.520 SoftwareImageRevisionInfo: Entity
parent: Entity

Parameter: image
Type: reference to SoftwareImage or None
Description: none

Parameter: revisionID
Type: integer
Description: Revision ID

Parameter: creationTime
Type: timestamp
Description: Revision creation time

Parameter: removalTime
Type: timestamp
Description: Revision removal time

Parameter: description
Type: string
Description: Revision Description

5.2.521 StandaloneMonitoredEntity: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: type
Type: string
Description: Optional type in case name matches an other entity

Parameter: data
Type: string
Description: Data that will be passed to the script environment

Parameter: notes
Type: string
Description: Notes

5.2.522 StaticRoute: Entity

parent: Entity

Parameter: name
Type: string
Description: Generally a unique combination of gateway ip and netmaskbits

Parameter: ip
Type: IP
Description: Destination IP

Parameter: gateway
Type: IP
Description: Gateway IP address

Parameter: netmaskBits
Type: unsigned integer
Description: Destination netmask bits

Parameter: metric
Type: unsigned integer
Description: Network metric

Parameter: network
Type: reference to Network or None
Description: Destination network the interface is connected to

Parameter: networkDeviceName
Type: string
Description: Name of network device

Parameter: notes
Type: string
Description: Administrator notes
5.2.523 StatusCollectorSubSystemInfo: StatusSubSystemInfo

parent: StatusSubSystemInfo

Parameter: nodes
Type: unsigned integer
Description: none

Parameter: updates
Type: unsigned integer
Description: none

Parameter: merges
Type: unsigned integer
Description: none

5.2.524 StatusControllerSubSystemInfo: StatusSubSystemInfo

parent: StatusSubSystemInfo

Parameter: updates
Type: unsigned integer
Description: none

Parameter: reports
Type: unsigned integer
Description: none

Parameter: nodes
Type: unsigned integer
Description: none

Parameter: updates
Type: unsigned integer
Description: none

Parameter: checks
Type: unsigned integer
Description: none

5.2.527 StatusSubSystemInfo: SubSystemInfo
parent: SubSystemInfo

Parameter: stopped
Type: boolean
Description: Stopped

Parameter: suspended
Type: boolean
Description: Suspended

5.2.528 StatusTimeoutSubSystemInfo: StatusSubSystemInfo
parent: StatusSubSystemInfo

Parameter: active
Type: unsigned integer
Description: none

Parameter: registered
Type: unsigned integer
Description: none

Parameter: handled
Type: unsigned integer
Description: none

5.2.529 StatusTransitionSubSystemInfo: StatusSubSystemInfo
parent: StatusSubSystemInfo

Parameter: handled
Type: unsigned integer
Description: none

Parameter: transitions
Type: list of unsigned numbers
Description: Transition matrices: from -> to

5.2.530 StorageNodePolicy: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: exportedDirectories
Type: list of strings
Description: Exported directories

Parameter: minStorageVolumeSize
Type: unsigned integer
Description: Minimal size of storage volume

Parameter: defaultJobOutputSize
Type: unsigned integer
Description: Default size of job output data

Parameter: storageVolumeFilesystem
Type: string
Description: Filesystem type of storage volume

Parameter: shareStorageVolumeBetweenJobs
Type: boolean
Description: Share storage volumes between jobs

Parameter: scalingUpFactor
Type: float
Description: Scaling up factor

Parameter: storageNodeNamePrefix
Type: string
Description: Storage node name prefix

Parameter: storagePrototype
Type: reference to CloudNode
Description: Template node used for instantiating cloud storage nodes

Parameter: maxStorageNodeCount
Type: unsigned integer
Description: Maximum number of storage nodes

Parameter: maxJobsPerNode
Type: unsigned integer
Description: Maximum number of jobs that can be run on a single storage node simultaneously

Parameter: storageNodeIdleTimeLimit
Type: unsigned integer
Description: After that timeout storage node will be shut down

Parameter: terminateStorageNodes
Type: boolean
Description: Terminate storage nodes instead of powering them off

Parameter: cloudOperationTimeout
Type: unsigned integer
Description: Timeout for various cloud job operations

Parameter: maxDownloadTime
Type: unsigned integer
Description: Maximum time job results data transfer can take

Parameter: maxUploadTime
Type: unsigned integer
Description: Maximum time job input data transfer can take

Parameter: intermediateStorage
Type: CMJobIntermediateStorage
Description: Place to store data to be accessible from storage node

Parameter: restartNFSERVER
Type: boolean
Description: Restarts the NFS server on the storage node before umounting.

Parameter: extraOptions
Type: list of strings
Description: Extra options for jobs
5.2.531 StorageRole: Role

parent: Role

Parameter: nfsThreads
Type: unsigned integer
Description: Number of nfs threads (0 for don’t touch the current config file value)

Parameter: disableNFS1
Type: boolean
Description: Disable NFS1, NFS threads needs to be set

Parameter: disableNFS2
Type: boolean
Description: Disable NFS2, NFS threads needs to be set

Parameter: disableNFS3
Type: boolean
Description: Disable NFS3, NFS threads needs to be set

Parameter: disableNFS4
Type: boolean
Description: Disable NFS4, NFS threads needs to be set

Parameter: nfs4grace
Type: unsigned integer
Description: NFS4 grace period (0 for don’t touch the current config file value)

Parameter: statdPort
Type: unsigned integer
Description: Stat daemon port (0 for don’t touch the current config file value)

Parameter: statdOutgoingPort
Type: unsigned integer
Description: Stat daemon outgoing port (0 for don’t touch the current config file value)

Parameter: mountdPort
Type: unsigned integer
Description: Mount daemon port (0 for don’t touch the current config file value)

Parameter: rquotadPort
Type: unsigned integer
Description: Rquota daemon port (0 for don’t touch the current config file value)

Parameter: lockdTcpPort
Type: unsigned integer
Description: Lock daemon TCP port (0 for don’t touch the current config file value)
Parameter: lockdUdpPort
Type: unsigned integer
Description: Lock daemon UDP port (0 for don’t touch the current config file value)

Parameter: rdmaPort
Type: unsigned integer
Description: RDMA port (0 for don’t touch the current config file value)

5.2.532 StringListObject: Entity
parent: Entity

Parameter: list
Type: list of strings
Description: List

5.2.533 SubnetManagerRole: Role
parent: Role

Parameter: interconnect
Type: enum
Description: Type of interconnect

Parameter: ibl2mtu
Type: enum
Description: IB L2 MTU Value

5.2.534 SubSystemInfo: Entity
parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: name
Type: string
Description: Name

Parameter: timestamp
Type: timestamp
Description: Time

5.2.535 Switch: Device
parent: Device

Parameter: ip
Type: IP
Description: IP address

Parameter: network
Type: reference to Network or None
Description: Network to which this switch is connected

Parameter: ports
Type: integer
Description: Number of ports

Parameter: model
Type: string
Description: The switch model

Parameter: snmpSettings
Type: SNMPSettings or None
Description: Configure the cluster wide SNMP settings

Parameter: accessSettings
Type: AccessSettings or None
Description: Configure the cluster wide Access settings

Parameter: members
Type: list of references to Switch
Description: List of switches belonging to this stack

Parameter: controlScript
Type: string
Description: Custom control script that provides switch functionality

Parameter: controlScriptTimeout
Type: unsigned integer
Description: Control script timeout

Parameter: priority
Type: unsigned integer
Description: Devices on multiple switches will be listed under the switch with the largest priority

Parameter: lowestPort
Type: integer
Description: Lowest port

Parameter: uplinks
Type: list of unsigned numbers
Description: List of ports connected to other switches.

Parameter: disablePortDetection
Type: boolean
Description: Disable port detection for this switch
Parameter: disablePortMapping
Type: boolean
Description: Disable port index mapping

Parameter: vlanCacheTime
Type: unsigned integer
Description: Time to cache VLAN information

Parameter: hasClientDaemon
Type: boolean
Description: Switch runs a python cluster manager client daemon

Parameter: ztpSettings
Type: ZTPSettings or None
Description: Configure the ZTP settings

Parameter: guid
Type: UUID
Description: The switch GUID

Parameter: subnetManager
Type: boolean
Description: Indicate the subnet manager is running

Parameter: disableSNMP
Type: boolean
Description: Disable SNMP calls

Parameter: services
Type: list of OSServiceConfig
Description: Manage operating system services

Parameter: cumulusMode
Type: enum
Description: Cumulus mode

Parameter: cumulusFile
Type: string
Description: Cumulus file

Parameter: cumulusConfiguration
Type: free JSON object
Description: Cumulus

5.2.536 SwitchPort: Entity
parent: Entity

Parameter: networkSwitch
5.2 Entities

Type: reference to Switch
Description: Switch

Parameter: prt
Type: unsigned integer
Description: Port number on the switch

5.2.537 SyncInfo: Entity
Parent: Entity

Parameter: node
Type: reference to Node
Description: none

Parameter: provisioningNode
Type: reference to Node
Description: none

Parameter: fsPart
Type: reference to FSPart
Description: none

Parameter: mode
Type: enum
Description: none

Parameter: type
Type: enum
Description: none

Parameter: dryRun
Type: boolean
Description: none

Parameter: startTime
Type: timestamp
Description: none

Parameter: endTime
Type: timestamp
Description: none

Parameter: exitCode
Type: integer
Description: none

Parameter: signal
Type: integer
Description: none

Parameter: numberOfFiles
Type: unsigned integer
Description: The count of all 'files' (in the generic sense), which includes directories, symlinks, etc.

Parameter: numberOfTransferredFiles
Type: unsigned integer
Description: The count of normal files that were updated via rsync's delta-transfer algorithm, which does not include created dirs, symlinks, etc.

Parameter: numberOfCreatedFiles
Type: unsigned integer
Description: The count of normal files that were created.

Parameter: numberOfDeletedFiles
Type: unsigned integer
Description: The count of normal files that were deleted.

Parameter: totalFileSize
Type: unsigned integer
Description: The total sum of all file sizes in the transfer. This does not count any size for directories or special files, but does include the size of symlinks.

Parameter: totalTransferredFileSize
Type: unsigned integer
Description: The total sum of all files sizes for just the transferred files.

Parameter: literalData
Type: unsigned integer
Description: How much unmatched file-update data we had to send to the receiver for it to recreate the updated files.

Parameter: matchedData
Type: unsigned integer
Description: How much data the receiver got locally when recreating the updated files.

Parameter: fileSizeSize
Type: unsigned integer
Description: How big the file-list data was when the sender sent it to the receiver. This is smaller than the in-memory size for the file list due to some compressing of duplicated data when rsync sends the list.

Parameter: fileListGenerationTime
Type: float
Description: The number of seconds that the sender spent creating the file list. This requires a modern rsync on the sending side for this to be present.

Parameter: fileListTransferTime
5.2 Entities

**Type:** float

**Description:** The number of seconds that the sender spent sending the file list to the receiver.

**Parameter:** `totalSent`

**Type:** unsigned integer

**Description:** The count of all the bytes that rsync sent from the client side to the server side.

**Parameter:** `totalReceived`

**Type:** float

**Description:** Transfer speed

**Parameter:** `speedup`

**Type:** float

**Description:** Speedup

### 5.2.538 SyncSource: Entity

**parent:** Entity

**Parameter:** `ref_node_uuid`

**Type:** UUID

**Description:** Node

**Parameter:** `fspart`

**Type:** reference to FSPart

**Description:** none

**Parameter:** `priority`

**Type:** unsigned integer

**Description:** none

### 5.2.539 SyncTarget: Entity

**parent:** Entity

**Parameter:** `ref_node_uuid`

**Type:** UUID

**Description:** Node

**Parameter:** `fspart`

**Type:** reference to FSPart

**Description:** none

**Parameter:** `target`
Type: string
Description: none

Parameter: prefix
Type: string
Description: none

Parameter: excludeList
Type: string
Description: none

Parameter: root
Type: boolean
Description: none

Parameter: priority
Type: unsigned integer
Description: none

5.2.540 SysInfoCollector: Entity
parent: Entity

Parameter: ref_device_uuid
Type: UUID
Description: Device

Parameter: processors
Type: list of Processor
Description: none

Parameter: disks

Type: unsigned integer
Description: none

Parameter: memorySwap
Type: unsigned integer
Description: none

Parameter: diskCount
Type: unsigned integer
Description: none

Parameter: diskTotalSpace
Type: unsigned integer
Description: none

Parameter: osName
Type: string
Description: none

Parameter: osVersion
Type: string
Description: none

Parameter: osFlavor
Type: string
Description: none

Parameter: vendorTag
Type: string
Description: none

Parameter: systemName
Type: string
Description: none

Parameter: systemManufacturer
Type: string
Description: none

Parameter: nics
Type: list of strings
Description: none

Parameter: ibGUIDs
Type: list of strings
Description: none

Parameter: bootIf
Type: string
Description: none

Parameter: interconnects
Type: list of strings
Description: none

Parameter: raidControllers
Type: list of strings
Description: none

Parameter: extra
Type: free JSON object
Description: none

Parameter: virtualCluster
Type: boolean
Description: none

Parameter: selinux
Type: boolean
Description: none
5.2 Entities

Parameter: fips
Type: boolean
Description: none

Parameter: fabric
Type: boolean
Description: none

Parameter: clusterRandomNumber
Type: unsigned integer
Description: none

Parameter: updateCount
Type: unsigned integer
Description: none

Parameter: timestamp
Type: timestamp
Description: none

5.2.541 SystemctlUnit: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: unit
Type: string
Description: Unit

Parameter: load
Type: string
Description: Load

Parameter: active
Type: string
Description: Active

Parameter: sub
Type: string
Description: The low-level unit activation state, values depend on unit type

Parameter: description
Type: string
Description: Description
5.2.542 TimeZoneSettings: Entity
parent: Entity

Parameter: timeZone
Type: string
Description: Time zone

Parameter: biosUTC
Type: boolean
Description: Store BIOS time in UTC

5.2.543 UGEcgroupsSettings: WlmCgroupsSettings
parent: WlmCgroupsSettings

Parameter: enabled
Type: boolean
Description: If true then settings are configured

Parameter: cpuset
Type: boolean
Description: If true then UGE puts the job into a cpuset cgroup with the specific CPU ids assigned

Parameter: freezer
Type: boolean
Description: If true then the whole job is frozen by the kernel

Parameter: freezePeTasks
Type: boolean
Description: If false then slave tasks are not put in the freezer, otherwise all slave tasks are frozen (also slaves on remote hosts)

Parameter: killing
Type: boolean
Description: If true then UGE signals all processes forked/started by the job until all of them are killed

Parameter: forcedNuma
Type: boolean
Description: If true then on NUMA machines only local memory is allowed to be used when the job requested memory allocation with -mbind cores:strict

Parameter: vmemLimit
Type: boolean
Description: Specifies if virtual memory can be limited with cgroups (h_vmem_limit)

Parameter: memFreeHard
Type: boolean
Description: If true then kernel ensures that the job does not use more main memory than required (m_mem_free_hard)

Parameter: memFreeSoft
Type: boolean
Description: If true (and hard memory limit is turned off) then the requested memory with m_mem_free is a soft limit (m_mem_free_soft)

Parameter: minMemoryLimit
Type: string
Description: A host based minimum memory limit, in bytes or values like 10M, 1G (min_memory_limit)

Parameter: jobCgroupTemplate
Type: string
Description: Template for job cgroup path ($JOBID will be replaced to job id, $TASKID to array task id)

Parameter: options
Type: list of strings
Description: Additional UGE cgroup options

Parameter: devices
Type: list of strings
Description: Configurations for cgroup devices

5.2.544 UGEClientRole: UGERole
parent: UGERole

Parameter: execHost
Type: boolean
Description: Specifies if host is allowed to run Grid Engine jobs

Parameter: adminHost
Type: boolean
Description: Specifies if host is administrative one

Parameter: slots
Type: string
Description: Number of slots available on this node/category

Parameter: queues
Type: list of references to UGEJobQueue
Description: Queues this node/nodes in this category belongs to

Parameter: allQueues
Type: boolean
Description: When set, the role will provide all available queues. (The queues property will then be ignored.)

Parameter: gpus
Type: unsigned integer
Description: Number of gpus

Parameter: gpusDevices
Type: list of strings
Description: Custom gpu RSMAP

Parameter: micDevices
Type: list of strings
Description: Custom phi RSMAP

Parameter: cgroups
Type: UGEcgroupsSettings
Description: Submode containing UGE related cgroups settings

Parameter: nodeCustomizations
Type: list of WlmNodeCustomizationEntry
Description: Grid Engine node custom properties

Parameter: prolog
Type: string
Description: Path to prolog script that is configured at local level (e.g. root@/cm/local/apps/cmd/scripts/prolog)

Parameter: epilog
Type: string
Description: Path to epilog script that is configured at global level

Parameter: dcgmPort
Type: unsigned integer
Description: NVIDIA’s Data Center GPU Manager Port

Parameter: IMEX
Type: boolean
Description: Start IMEX daemon from prolog/epilog

5.2.545 UGEJob: GridEngineJob
parent: GridEngineJob

5.2.546 UGEJobQueue: GridEngineJobQueue
parent: GridEngineJobQueue

Parameter: pelist
Type: list of strings
5.2 Entities

Description: Parallel environments associated with queue

5.2.547 UGEJobQueueStat: GridEngineJobQueueStat
parent: GridEngineJobQueueStat

5.2.548 UGEPParallelEnvironment: GridEngineParallelEnvironment
parent: GridEngineParallelEnvironment

Parameter: daemonForksSlaves
Type: boolean
Description: Defines if every task of a tightly integrated parallel job gets started individually

Parameter: masterForksSlaves
Type: boolean
Description: Indicates if limits set for the master task are multiplied by the number of slots granted on the host

5.2.549 UGERole: Role
parent: Role

Parameter: wlmCluster
Type: reference to UGEWlmCluster
Description: WLM cluster link to this WLM role

5.2.550 UGEServerRole: UGERole
parent: UGERole

Parameter: externalServer
Type: boolean
Description: Grid Engine server daemon is running on some external machine

Parameter: prolog
Type: string
Description: Path to prolog script that is configured at global level

Parameter: epilog
Type: string
Description: Path to epilog script that is configured at global level

5.2.551 UGESubmitRole: WlmSubmitRole
parent: WlmSubmitRole

Parameter: ugeWlmClusters
Type: list of references to UGEWlmCluster
Description: List of UGE clusters which the role belongs to

5.2.552 UGEWlmCluster: WlmCluster
parent: WlmCluster

Parameter: parallelEnvironments
Type: list of UGEParallelEnvironment
Description: UGE Parallel Environments

Parameter: cgroups
Type: UGECgroupsSettings
Description: Submode containing UGE related cgroups settings

Parameter: placeholders
Type: list of JobQueuePlaceholder
Description: Job queue node placeholders mode

Parameter: prefix
Type: string
Description: UGE installation directory

Parameter: cell
Type: string
Description: UGE cell directory location

Parameter: version
Type: string
Description: Major UGE version

Parameter: accountingSynchronization
Type: boolean
Description: Update UGE job final state in BCM by calling qstat periodically

5.2.553 UnmanagedNode: Device
parent: Device

Parameter: unmanagedNodeConfiguration
Type: reference to UnmanagedNodeConfiguration
Description: The unmanaged node configuration used for this node

Parameter: ip
Type: IP
Description: Ip address

Parameter: network
Type: reference to Network or None
Description: Network to which this switch is connected

Parameter: additionalHostnames
Type: list of strings
Description: List of additional hostnames that should resolve to the interfaces IP address

Parameter: pxelabel
Type: string
Description: PXE menu label to be used when this node boots

Parameter: bmcIp
Type: IP
Description: BMC ip address

Parameter: bmcType
Type: enum
Description: The type of BMC interface available

Parameter: bmcSettings
Type: BMCSettings or None
Description: Configure the baseboard management controller settings

Parameter: biosSetup
Type: free JSON object
Description: BIOS setup

Parameter: bootLoader
Type: enum
Description: Boot loader

Parameter: bootLoaderProtocol
Type: enum
Description: Boot loader protocol for retrieving initrd and vmlinuz

Parameter: bootLoaderFile
Type: string
Description: Alternative boot loader file

Parameter: keyValueSettings
Type: KeyValueSettings or None
Description: Key value settings unique to this node

5.2.554 UnmanagedTypeNodeConfiguration: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: description
Type: string
Description: description

Parameter: pxeConfigurationTemplate
Type: string
Description: PXE configuration template used to write out pxelinux.cfg

Parameter: grubConfigurationTemplate
Type: string
Description: Grub configuration template used to write out grub.cfg

Parameter: image
Type: reference to FSPart or None
Description: Image filesystem part used to boot nodes from

Parameter: pxelabel
Type: string
Description: PXE menu label to be used when this node boots

Parameter: keyValueSettings
Type: KeyValueSettings or None
Description: Key value settings used for all unmanaged nodes in this configuration unless otherwise specified

Parameter: bmcSettings
Type: BMCSettings or None
Description: Configure the baseboard management controller settings

Parameter: bootLoader
Type: enum
Description: Boot loader

Parameter: bootLoaderProtocol
Type: enum
Description: Boot loader protocol for retrieving initrd and vmlinuz

Parameter: bootLoaderFile
Type: string
Description: Alternative boot loader file

5.2.555 User: Entity
parent: Entity

Parameter: name
Type: string
Description: User login (e.g. donald)

Parameter: ID
Type: string
Description: User ID number

Parameter: commonName
Type: string
Description: Full name (e.g. Donald Duck)

Parameter: surname  
Type: string  
Description: Surname (e.g. Duck)

Parameter: groupID  
Type: string  
Description: Base group of this user

Parameter: loginShell  
Type: string  
Description: Login shell

Parameter: homeDirectory  
Type: string  
Description: Home directory

Parameter: password  
Type: string  
Description: Password

Parameter: homeDirOperation  
Type: boolean  
Description: Set to false to not create or move home directory

Parameter: shadowMin  
Type: unsigned integer  
Description: Minimum number of days required between password changes

Parameter: shadowMax  
Type: unsigned integer  
Description: Maximum number of days for which the user password remains valid.

Parameter: shadowWarning  
Type: unsigned integer  
Description: Number of days of advance warning given to the user before the user password expires

Parameter: shadowInactive  
Type: unsigned integer  
Description: Number of days of inactivity allowed for the user

Parameter: shadowLastChange  
Type: unsigned integer  
Description: Number of days between January 1, 1970 and the day when the user password was last changed
Parameter: `shadowExpire`
Type: unsigned integer
Description: Date on which the user login will be disabled

Parameter: `email`
Type: string
Description: email

Parameter: `profile`
Type: string
Description: Profile for Authorization

Parameter: `certSerialNumber`
Type: integer
Description: Serial number of the certificate assigned to user

Parameter: `certCloudJobSerialNumber`
Type: integer
Description: Serial number of the cloudjob certificate assigned to user

Parameter: `projectManager`
Type: `ProjectManager` or None
Description: Project manager

Parameter: `notes`
Type: string
Description: Administrator notes

Parameter: `homePage`
Type: string
Description: Home page

Parameter: `information`
Type: string
Description: Information added by CMDaemon

Parameter: `cloudJob`
Type: boolean
Description: Create a certificate with the cloudjob profile for cmjob

Parameter: `writeSshProxyConfig`
Type: boolean
Description: Write ssh proxy config

5.2.556 Validation: Entity
parent: Entity

Parameter: `ref_entity_uuid`
5.2 Entities

Type: UUID
Description: Entity

Parameter: field
Type: string
Description: Field

Parameter: error_code
Type: enum
Description: Error

Parameter: message
Type: string
Description: Message

Parameter: severity
Type: enum
Description: Severity

5.2.557 VersionInfo: Entity

parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: cmVersion
Type: string
Description: \textit{none}

Parameter: cmdaemonVersion
Type: string
Description: \textit{none}

Parameter: cmdaemonBuildIndex
Type: unsigned integer
Description: \textit{none}

Parameter: cmdaemonBuildHash
Type: string
Description: \textit{none}

Parameter: databaseVersion
Type: unsigned integer
Description: \textit{none}
5.2.558  WillChange: Entity

parent: Entity

Parameter: ref_base_type
Type: string
Description: Base type

Parameter: ref_entity_uuid
Type: UUID
Description: Entity

Parameter: parameter
Type: string
Description: Parameter

Parameter: auto_change
Type: enum
Description: Auto change

5.2.559  WireguardInfo: Entity

parent: Entity

Parameter: ref_node_uuid
Type: UUID
Description: Node

Parameter: interface
Type: string
Description: Interface name

Parameter: publicKey
Type: string
Description: Public key

5.2.560  WlmAdvancedAccountingSettings: Entity

parent: Entity

Parameter: managedHierarchy
Type: list of strings
Description: Representation of account name as a list of organizational entities

Parameter: separator
Type: string
Description: Separator of organizational entities in the account names

Parameter: jobCommentFields
Type: list of strings
Description: User provided job type as a regexp that is parsed and monitored

Parameter: extractAccountingInfo
Type: boolean
Description: Extract accounting information, set to false to keep inside account/comments fields

5.2.561 WlmCgroupsSettings: Entity
parent: Entity

Parameter: mountPoint
Type: string
Description: Where cgroups is mounted

Parameter: autoMount
Type: boolean
Description: If true then workload manager tries to mount a subsystem if it is not mounted yet

5.2.562 WlmCluster: Entity
parent: Entity

Parameter: name
Type: string
Description: Name

Parameter: moduleFileTemplate
Type: string
Description: Template content for system module file

Parameter: primaryServer
Type: reference to Node or None
Description: The WLM primary server (where the active WLM daemon will be running). This parameter has no effect in HA setup controlled by Bright.

Parameter: topologySwitches
Type: list of references to Switch
Description: List of switches that should be used to write the topology file

Parameter: network
Type: reference to Network or None
Description: Network that will be used to form FQDN node names

Parameter: tracingJobs
Type: list of strings
Description: A list of job ids to trace in CMDaemon

Parameter: enablePrejob
Type: boolean
Description: Enable Bright Cluster Manager powered prejob healthchecking in the workload manager

Parameter: accounting
Type: WlmAdvancedAccountingSettings or None
Description: Advanced accounting settings

5.2.563 WlmFairshareOverview: Entity
parent: Entity

Parameter: ref_wlm_cluster_uuid
Type: UUID
Description: WlmCluster

Parameter: fairshareTree
Type: free JSON object
Description: Accounting fairshare tree

5.2.564 WlmNodeCustomizationEntry: Entity
parent: Entity

Parameter: key
Type: string
Description: Name of the key

Parameter: value
Type: string
Description: Value for the key

Parameter: enabled
Type: boolean
Description: Add the key/value to workload menegment node configuration or not

Parameter: notes
Type: string
Description: Administrator notes

5.2.565 WlmNodeResource: Entity
parent: Entity

Parameter: name
Type: string
Description: Resource name (Example: gpu)

Parameter: extraName
Type: string
Description: Additional name (example: tesla)

Parameter: amount
Type: unsigned integer
5.2.565  **WlmSubmitRole**: Role

parent: Role

5.2.567  **ZTPNewSwitchSettings**: Entity

parent: Entity

Parameter:  ztpScriptTemplate
Type:  string
Description:  ZTP script template for new switches

Parameter:  switchImage
Type:  string
Description:  Image loaded via ONIE

Parameter:  keyValueSettings
Type:  KeyValueSettings or None
Description:  Key value settings which can be passed to the ZTP script

5.2.568  **ZTPSettings**: Entity

parent: Entity

Parameter:  ztpScriptTemplate
Type:  string
Description:  ZTP script template

Parameter:  switchImage
Type:  string
Description:  Image loaded via ONIE

Parameter:  checkImageInBoot
Type:  boolean
Description:  Check image matches on boot, if not clear switch and start from scratch

Parameter:  runZtpOnEachBoot
Type: boolean  
Description: Run ZTP on each boot

Parameter: authorizedKeyFileRoot  
Type: string  
Description: Authorized key file to be copied for root user

Parameter: authorizedKeyFileCumulus  
Type: string  
Description: Authorized key file to be copied for cumulus user

Parameter: enableAPI  
Type: boolean  
Description: Enable

Parameter: enableExternalAccessAPI  
Type: boolean  
Description: Enable external access API instead of only localhost

Parameter: mergeKeyValueSettingsPartition  
Type: boolean  
Description: Merge key value settings partition

Parameter: keyValueSettings  
Type: KeyValueSettings or None  
Description: Key value settings which can be passed to the ZTP script

5.3 JSON Examples

```bash
complete.sh
#!/bin/bash

echo

push_to_CMDaemon.sh
In the following example, the health check ManagedServicesOK, is pushed to CMDaemon with a FAIL value.

Example

[root@basecm10 ~]# cat push_to_CMDaemon.sh
#!/bin/bash
URL='https://master:8081/monitoring/push/ManagedServicesOk?info=brol&class=Push/Single&healthcheck=yes'
value=FAIL
curl --cert $HOME/.cm/admin.pem --key $HOME/.cm/admin.key -i -k -X POST -d "$value" $URL; echo

Its behavior can be verified by checking the latest value for ManagedServicesOK before and after the push_to_CMDaemon.sh script is run:

Example

[root@basecm10 ~]# curl --cert "/.cm/admin.pem --key "/.cm/admin.key -k "https://master:8081/rest/v1/monitoring/latest?measurable=ManagedServicesOK&entity=basecm10&indent=1" 
{
  "data": [
  {
    "age": 89.735,
    "entity": "basecm10".
  }]}
"measurable": "ManagedServicesOk",
"raw": 0.0,
"time": 1586450030968,
"value": "PASS"
}
]

[root@basecm10 ]# ./push_to_CMDaemon.sh
HTTP/1.1 200 OK
Content-Length: 55
Content-Type: application/json

{
    "values": {
        "added": 1,
        "provided": 1
    }
}

[root@basecm10 ]# curl --cert ~/.cm/admin.pem --key ~/.cm/admin.key -k
"https://master:8081/rest/v1/monitoring/latest?measurable=ManagedServicesOK&entity=basecm10&indent=1"
{
    "data": [
        {
            "age": 3.357,
            "entity": "basecm10",
            "info": "brol",
            "measurable": "ManagedServicesOk",
            "raw": 2.0,
            "time": 1586450124437,
            "value": "FAIL"
        }
    ]
}

A metric version of the push, using the measurable push-test-02 might look like:

#!/bin/bash
URL="https://localhost:8081/monitoring/push/push-test-02?info=brol&class=Push/Single&unit=s"$value=$(date +%s)
curl --cert $HOME/.cm/admin.pem --key $HOME/.cm/admin.key -i -k -X POST -d "$value" $URL; echo

A collection can be pushed as follows: To initialize (once):

#!/bin/bash
URL="https://localhost:8081/monitoring/initialize"
curl --cert $HOME/.cm/admin.pem --key $HOME/.cm/admin.key -i -k -X POST -d 
'[[{"metric":"push-collection-01","class":"Push/Collection"},{"metric":"push-collection-02","class":"Push/Collection"}]]' $URL; echo

After initializing, sampling can be done with:

#!/bin/bash
URL="https://localhost:8081/monitoring/push"
curl --cert $HOME/.cm/admin.pem --key $HOME/.cm/admin.key -i -k -X POST -d 
'[[{"metric":"push-collection-01","value":31},{"metric":"push-collection-02","value":32,"info" :"Some message"}]]' $URL; echo
